## Exam Amazon AWS-Certified-Developer-Associate Exercise | AWS-Certified-Developer-Associate Flexible Learning Mode

Obtaining a certificate is not only an affirmation of your ability, but also can improve your competitive force in the job market. AWS-Certified-Developer-Associate exam materials will help you pass the exam and get the certificate successfully. You just need to spend some money and you can get the certificate. In addition, we have a professional team to collect the latest information about the AWS-Certified-Developer-Associate Exam Materials, we can ensure you that what you get is the latest version we have. We offer you free update for 365 days after purchasing, and the update version for AWS-Certified-Developer-Associate exam dumps will be sent to your email automatically.

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q43-Q48):

### NEW QUESTION # 43

An application is using a custom library to make HTTP calls directly to AWS service endpoints. The application is experiencing transient errors that are causing processes to stop when each error is first encountered. A request has been made to make the application more resilient by adding error retries and exponential backoff.

How should a developer implement the changes with MINIMAL custom code?

- A. Use the AWS CLI to configure the retry settings in a named profile

- B. Add a Retry-After HTTP header to API requests.
- C. Change the custom library to retry on 5xx errors only
- D. Use an AWS SDK and set retry-specific configurations.

**Answer: A**

#### NEW QUESTION # 44

A developer is using Amazon S3 as the event source that invokes a Lambda function when new objects are created in the bucket. The event source mapping information is stored in the bucket notification configuration. The developer is working with different versions of the Lambda function, and has a constant need to update notification configuration so that Amazon S3 invokes the correct version. What is the MOST efficient and effective way to achieve mapping between the S3 event and Lambda?

- A. Use Lambda environment variables
- B. Use Lambda tags.
- C. Use a Lambda alias
- D. Use a different Lambda trigger

**Answer: D**

#### NEW QUESTION # 45

A Developer has created a new AWS IAM user that has s3:putObject permission to write to a specific Amazon S3 bucket. This S3 bucket uses server-side encryption with AWS KMS managed keys (SSE-KMS) as the default encryption. Using the access key and secret key of the IAM user, the application received an access denied error when calling the PutObject API. How can this issue be resolved?

- A. Update the policy of the IAM user to allow the kms:GenerateDataKey action.
- B. Update the ACL of the S3 bucket to allow the IAM user to upload objects.
- C. Update the bucket policy of the S3 bucket to allow the IAM user to upload objects.
- D. Update the policy of the IAM user to allow the s3:Encrypt action.

**Answer: A**

Explanation:

Explanation/Reference: <https://aws.amazon.com/premiumsupport/knowledge-center/s3-access-denied-error-kms/>

#### NEW QUESTION # 46

A company receives food orders from multiple partners. The company has a microservices application that uses Amazon API Gateway APIs with AWS Lambda integration. Each partner sends orders by calling a customized API that is exposed through API Gateway. The API call invokes a shared Lambda function to process the orders.

Partners need to be notified after the Lambda function processes the orders. Each partner must receive updates for only the partner's own orders. The company wants to add new partners in the future with the fewest code changes possible.

Which solution will meet these requirements in the MOST scalable way?

- A. Create an Amazon Simple Notification Service (Amazon SNS) topic. Configure the Lambda function to publish messages with specific attributes to the SNS topic. Subscribe each partner to the SNS topic. Apply the appropriate filter policy to the topic subscriptions.
- B. Create one Amazon Simple Notification Service (Amazon SNS) topic. Subscribe all partners to the SNS topic.
- C. Create a different Lambda function for each partner. Configure the Lambda function to notify each partner's service endpoint directly.
- D. Create a different Amazon Simple Notification Service (Amazon SNS) topic for each partner. Configure the Lambda function to publish messages for each partner to the partner's SNS topic.

**Answer: A**

#### NEW QUESTION # 47

A user is enabling a static website hosting on an S3 bucket. Which of the below mentioned parameters cannot be configured by the

user?

- A. Conditional redirection on object name
- B. Error document
- **C. Conditional error on object name**
- D. Index document

**Answer: C**

Explanation:

To host a static website, the user needs to configure an Amazon S3 bucket for website hosting and then upload the website contents to the bucket. The user can configure the index, error document as well as configure the conditional routing of on object name.
