CompTIA Tech+ Certification Exam Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which of the following is the most important consideration when opening a file on an OS GUI?

- A. Default permissions
- **B. File extension**
- C. Backup policy
- D. Data compression

Answer: B

Explanation:

The most important consideration when opening a file on an Operating System Graphical User Interface (OS GUI) is the file extension. A file extension identifies the type of file and determines which software application can open it. In the official CompTIA ITF+ Student Guide, it is stated that:

"The last part of the file name represents an extension, which describes what type of file it is and is used by Windows to associate the file with an application."

"Files are usually opened by double-clicking them. You may want to open a file in a software product other than the default, however. When you right-click a file, the shortcut menu displays a list of suitable choices, or you can choose Open With and browse for a different application. You can also use the Default Programs applet to configure file associations."

"Do not change a file's extension if it is shown. If you delete or change the extension, the file will not be associated with the correct program for opening it." This means the OS uses the file extension to decide which application to use to open a file. Changing or deleting the extension can result in the file not opening properly because it no longer matches the program expected to open it.

NEW QUESTION # 51

Which of the following is most likely the fastest residential internet option?

- A. Satellite
- B. DSL
- C. Cable
- **D. Fiber optic**

Answer: D

Explanation:

Fiber optic internet provides the fastest residential internet speeds due to its use of light for data transmission. The CompTIA ITF+ FC0-U71 Official Study Guide explains:

"Fiber-optic cabling provides very high-speed data transfer using light signals, with much greater bandwidth and lower latency compared to DSL, cable, or satellite."

"DSL and cable are slower and often shared among users, while satellite suffers from high latency." Reference:

NEW QUESTION # 52

Which of the following is a touch screen used for? (Choose two.)

- A. Processing
- B. Networking
- C. Logging
- D. Storage
- E. Output
- F. Input

Answer: E,F

Explanation:

A touch screen functions as both an input device (accepting user touch commands) and an output device (displaying images and information).

It does not perform storage, networking, processing, or logging.

NEW QUESTION # 53

Which of the following describes a printer?

- A. Processing
- B. Storage
- C. Input
- D. Output

Answer: D

Explanation:

A printer is an output device because it receives digital data from a computer and converts it into a printed physical format (such as paper).

"Output devices display or reproduce information from the computer. Examples include monitors, speakers, and printers." - CompTIA ITF+ Fundamentals Correct answer: B

NEW QUESTION # 54

A user moves to a new desk that is located next to the kitchen. Now, the user can no longer log in to the wireless network. Which of the following is causing this issue?

- A. Access control
- B. Older standards
- C. Interference factors
- D. Speed considerations

Answer: C

Explanation:

Wireless interference is often caused by environmental factors such as proximity to kitchens, which may contain microwaves and other electronic devices operating on the same 2.4 GHz frequency used by many Wi-Fi networks. The CompTIA ITF+ FC0-U71 Official Study Guide explains:

"Wireless signals are subject to interference from physical objects, walls, appliances, and other electronic devices operating on the same frequency."

"Microwave ovens and cordless phones are common sources of interference for Wi-Fi networks." In this case, the user's proximity to the kitchen is causing interference, not access control or standards issues.
