## 優秀的NSE5\_FNC\_AD-7.6證照考試和資格考試中的領先提供商和快速下載NSE5\_FNC\_AD-7.6: Fortinet NSE 5 - FortiNAC-F 7.6 Administrator

選擇參加Fortinet NSE5\_FNC\_AD-7.6 認證考試是一個明智的選擇，因為有了Fortinet NSE5\_FNC\_AD-7.6認證證書後，你的工資和職位都會有所提升，生活水準就會相應的提供。但是通過Fortinet NSE5\_FNC\_AD-7.6 認證考試不是很容易的，需要花很多時間和精力掌握好相關專業知識。Testpdf是一個制訂Fortinet NSE5\_FNC\_AD-7.6 認證考試培訓方案的專業IT培訓網站。你可以先在我們的網站上免費下載部分關於Fortinet NSE5\_FNC\_AD-7.6 認證考試的練習題和答案作為免費嘗試，以便你可以檢驗我們的可靠性。一般，試用Testpdf的產品後，你會對我們的產品很有信心的。

## 最新的 Fortinet Certification NSE5\_FNC\_AD-7.6 免費考試真題 (Q60-Q65):

### 問題 #60

While troubleshooting a network connectivity issue, an administrator determines that a device was being automatically provisioned to an incorrect VLAN.

Where would the administrator look to identify when and why FortiNAC-F made the network access change?

- A. The Admin Auditing view
- B. The Security Event view
- C. The Port Changes view
- D. The Reports view

答案: C

解題說明:

The Port Changes view records provisioning actions performed by FortiNAC-F, including VLAN changes, along with the associated reason and timestamp. This allows the administrator to determine when the network access change occurred and what

triggered it.

### 問題 #61

Refer to the exhibit. What would FortiNAC-F generate if only one of the security filters is satisfied?

Frequency	Vendor	Type	Sub Type	Threat ID	Description	Severity	Prefer Destination Address	Number of Custom Fields
1	Fortinet		virus				No	1
1							No	1

- A. A normal alarm
- B. A security alarm
- C. A security event
- **D. A normal event**

答案： D

解題說明：

In FortiNAC-F, Security Triggers are used to identify specific security-related activities based on incoming data such as Syslog messages or SNMP traps from external security devices (like a FortiGate or an IDS). These triggers act as a filtering mechanism to determine if an incoming notification should be escalated from a standard system event to a Security Event.

According to the FortiNAC-F Administrator Guide and relevant training materials for versions 7.2 and 7.4, the Filter Match setting is the critical logic gate for this process. As seen in the exhibit, the "Filter Match" configuration is set to "All". This means that for the Security Trigger named

"Infected File Detected" to "fire" and generate a Security Event or a subsequent Security Alarm, every single filter listed in the Security Filters table must be satisfied simultaneously by the incoming data.

In the provided exhibit, there are two filters: one looking for the Vendor "Fortinet" and another looking for the Sub Type "virus". If only one of these filters is satisfied (for example, a message from Fortinet that does not contain the "virus" subtype), the logic for the Security Trigger is not met. Consequently, FortiNAC-F does not escalate the notification. Instead, it processes the incoming data as a Normal Event, which is recorded in the Event Log but does not trigger the automated security response workflows associated with security alarms.

"The Filter Match option defines the logic used when multiple filters are defined. If 'All' is selected, then all filter criteria must be met in order for the trigger to fire and a Security Event to be generated. If the criteria are not met, the incoming data is processed as a normal event. If 'Any' is selected, the trigger fires if at least one of the filters matches."

### 問題 #62

An administrator wants FortiNAC-F to pass firewall tags to FortiGate to leverage dynamic address groups used in firewall policies. On FortiNAC-F, what determines the values that are passed?

- A. RADIUS group attribute
- B. Device profiling rule
- **C. Security rule**
- D. Model configuration

答案： C

解題說明：

The values of firewall tags sent from FortiNAC-F to FortiGate are defined within the security rule.

The security rule determines the action applied to a host or user, including which tags are assigned and passed to FortiGate for use in dynamic address groups and associated firewall policies.

### 問題 #63

When configuring FortiNAC-F to manage FortiGate VPN users, an endpoint compliance policy must be created for the integration. Why is the endpoint compliance policy necessary for this type of integration?

- A. To designate the required agent type
- B. To validate the VPN user credentials
- C. To confirm the installed endpoint certificate
- D. To validate the VPN client being used

答案： A

解題說明：

The integration of FortiNAC-F with FortiGate VPN requires a specific policy workflow to bridge the gap between initial user authentication and full network access. When a user connects to the VPN, the FortiGate typically provides the User ID and IP address, but FortiNAC-F requires a MAC address to uniquely identify and manage the endpoint's record.

According to the FortiGate VPN Integration Guide, the Endpoint Compliance Policy is a mandatory component of this setup because it is used to designate the required agent type.

Because a VPN connection is Layer 3, FortiNAC cannot "see" the MAC address through traditional SNMP or L2 polling. The compliance policy instructs the system to present a Captive Portal to the remote user, requiring them to download and run either the Persistent or Dissolvable Agent. The agent then reports the device's MAC address back to FortiNAC, allowing the system to correlate the VPN session with a host record.

Once the agent is running and the MAC is known, FortiNAC-F can evaluate the device's security posture (if scanning is configured) and send the necessary FSSO tags back to the FortiGate to lift the initial network restrictions. Without the compliance policy to enforce the agent requirement, the connection would remain in an isolated "IP-only" state with no unique hardware identity.

"The Endpoint Compliance Policy is necessary to control the agent requirement for VPN users.

Create a default VPN Endpoint Compliance Policy to distribute an agent via captive portal for isolated machines. This policy allows the administrator to designate the required agent type (Persistent or Dissolvable) that will be used to collect the hardware (MAC) address and perform health scans on the remote endpoint."

### 問題 #64

In an isolation VLAN which three services does FortiNAC supply? (Choose three.)

- A. DNS
- B. Web
- C. DHCP
- D. ISMTP
- E. NTP

答案： A,B,C
