Test JN0-232 Practice - JN0-232 Certification Exam Infor

The software of JN0-232 guide torrent boosts varied self-learning and self-assessment functions to check the results of the learning. The software can help the learners find the weak links and deal with them. Our JN0-232 exam questions boost timing function and the function to stimulate the exam. Our product sets the timer to stimulate the exam to adjust the speed and keep alert. Our JN0-232 test torrents have simplified the complicated notions and add the instances, the stimulation and the diagrams to explain any hard-to-explain contents. So it is worthy for you to buy our JN0-232 exam questions.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q60-Q65):

NEW QUESTION # 60
You are modifying the NAT rule order and you notice that a new NAT rule has been added to the bottom of the list.
In this situation, which command would you use to reorder NAT rules?

- A. insert
- B. top
- C. run
- D. up

Answer: B

Explanation:
In Junos OS, NAT rules are evaluated into top-down order. When a new rule is added, it is placed at the bottom of the rule set by default.
* To move a rule to the top of the rule set, the command is:
* set security nat source rule-set <name> rule <rule-name> top
* Option A (top):Correct. Moves the specified rule to the top of the list.
* Option B (run):Used to execute operational commands, not rule reordering.
* Option C (up):Not valid for reordering NAT rules.
* Option D (insert):Not a supported NAT reordering command in Junos.
Correct Command:top
Reference:Juniper Networks -NAT Rule Evaluation Order and Rule Reordering, Junos OS Security Fundamentals.

NEW QUESTION # 61
What are two ways that an SRX Series device identifies content? (Choose two.)

- A. It identifies and inspects the file extension of each file.
- B. It uses ALGs.
- C. It identifies file types in HTTP, FTP, and e-mail protocols.
- D. It uses AppID.

Answer: C,D

Explanation:
SRX Series devices provide content security features that rely on advanced identification mechanisms. File identification is not based merely on file extensions (which can be easily spoofed), but instead on deep inspection techniques:
* AppID (Application Identification):AppID is part of the AppSecure suite, allowing the device to classify applications and content regardless of port or protocol. This enables the SRX to detect applications and their related content for enforcement.
* Protocol-based file type identification:The SRX can recognize and identify file types embedded within HTTP, FTP, and e-mail (SMTP, IMAP, POP3) protocols. This provides accurate content inspection and filtering, independent of file naming conventions.
* Why not the others?
* File extensions (Option A) are not reliable for content security, so SRX does not use them.
* ALGs (Option D) are used for protocol handling, such as SIP or FTP control channels, not for content identification.
Reference:Juniper Networks -Content Security and AppSecure Overview, Junos OS Security Fundamentals, Official Course Guide.

NEW QUESTION # 62
You want to enable NextGen Web Filtering in SRX Series devices.
In this scenario, which two actions will accomplish this task? (Choose two.)

- A. Generate a CA-signed certificate.
- B. Configure an SSL initiation profile.
- C. Generate a self-signed certificate.
- D. Configure an SSL proxy profile.

Answer: C,D

Explanation:

NextGen Web Filtering (NGWF) requires SSL proxy functionality to inspect HTTPS traffic. To enable NGWF:
* Option B:You can generate aself-signed certificatefor SSL proxy functionality (or import a CA-signed certificate, but the course emphasizes self-signed for lab/demo purposes).
* Option D:You must configure anSSL proxy profileso that HTTPS traffic can be decrypted and inspected.
* Option A:A CA-signed certificate may be used in production but is not strictly required to enable NGWF.
* Option C:SSL initiation profiles are used for outbound SSL inspection initiated by the SRX, not for NGWF traffic interception.
Correct Actions:Generate a self-signed certificate, Configure an SSL proxy profile Reference:Juniper Networks -NextGen Web Filtering Configuration with SSL Proxy, Junos OS Security Fundamentals.

NEW QUESTION # 63
Click the Exhibit button.

Which type of policy is shown in the exhibit?

- A. global policy
- B. intra-zone policy
- C. default policy
- D. inter-zone policy

Answer: B

Explanation:
From the exhibit configuration:
[edit security policies from-zone Trust to-zone Trust]
policy allow-all {
match {
source-address any;
destination-address any;
application any;
}
then {
permit;
}
}
* Thefrom-zoneandto-zoneare both set toTrust # Trust.
* This means the policy is governing trafficwithin the same zone.
* Policies within the same zone are calledintra-zone policies.
Analysis of options:
* Global policy (A):Applied universally across zones, not zone-specific. Not the case here.
* Inter-zone policy (B):Applies between twodifferentzones (e.g., Trust # Untrust). Not the case here since both zones are Trust.
* Intra-zone policy (C):Correct. Applies to traffic within the same zone (Trust # Trust).
* Default policy (D):The implicit deny-all policy that applies when no policy matches. Not shown in this exhibit.
Correct Policy Type:Intra-zone policy
Reference:Juniper Networks -Security Policy Types (Inter-zone, Intra-zone, and Global), Junos OS Security Fundamentals.

NEW QUESTION # 64
You have created a series of security policies permitting access to a variety of services. You now want to create a policy that blocks access to all other services for all user groups.
What should you create in this scenario?

- A. Juniper ATP policy
- B. IDP policy
- C. integrated user firewall policy
- D. global security policy

Answer: D

Explanation:
To enforce acatch-all blocking policyafter other specific policies, the correct solution is aglobal security policy (Option A).
* Global policiescan apply universally across zones, and an administrator can configure a final "deny all" rule to block any unmatched

traffic.

* ATP policy (Option B):Protects against advanced threats, not used for catch-all rule enforcement.
* IDP policy (Option C):Focuses on intrusion detection and prevention signatures, not general traffic blocking.
* Integrated user firewall policy (Option D):Applies policies based on user identity, but it does not provide a universal block across all services.

Correct Solution:Global security policy

Reference:Juniper Networks -Global Security Policies, Junos OS Security Fundamentals.

NEW QUESTION # 65

......

While JN0-232 exam preparing for the Security, Associate (JNCIA-SEC) (JN0-232) exam, candidates have to pay extra money when Juniper introduces new changes. With TopExamCollection you can save money in this scenario as up to 365 days of free updates are available. You can also download a free demo to understand everything about TopExamCollection JN0-232 Exam Material before buying.
