NEW QUESTION # 86

Which two statements correctly describe Mist claim codes and activation codes? (Choose two.)

- A. Claim codes may be used to claim multiple APs at once.
- B. Activation codes may be used to claim multiple APs at once.
- C. An activation code is printed on a sticker on the AP.
- D. Claim codes may be used to claim only one AP.

Answer: B,D

Explanation:

Claim Codes: Claim codes are unique to each AP and can be used to claim only one AP at a time. This ensures each device is correctly registered and managed individually within the Mist system.

Activation Codes: Activation codes can be used to claim multiple APs at once, facilitating bulk onboarding and simplifying the setup process for large deployments.

NEW QUESTION # 88

What are two ways that Marvis Minis validates network configurations? (Choose two.)

- A. Marvis Minis uses supervised machine learning.
- B. Marvis Minis requires additional hardware for validation.
- C. Marvis Minis uses unsupervised machine learning.
- D. Marvis Minis validates configurations automatically.

Answer: A,D

Explanation:

Marvis Minis validates network configurations automatically and uses supervised machine learning. As stated in the Juniper Mist AI documentation, "Marvis Minis runs validations automatically at regular intervals and can be triggered manually by administrators. Minis use network digital twin technology and supervised machine learning to simulate and validate real-world user connectivity events." The system automatically creates patterns, triggers tests, and correlates real user and simulated network behaviors with the learned models. The validation covers critical network services-such as DHCP, DNS, ARP, and application reachability-and does so across various scopes (site, AP, VLAN, and switch). There is no requirement for additional hardware, as the digital twin reuses existing network infrastructure and existing APs.

"AI VALIDATED indicates that Marvis has confirmed and resolved a network issue autonomously using AI- driven automation and telemetry correlation." This means Marvis performed the full troubleshooting cycle-identifying the anomaly, validating its cause, and confirming resolution-based on continuous monitoring and real-time network analytics.

Other statuses include:

- * UNRESOLVED:Issue is ongoing and needs attention.
- * RESOLVED:Marked manually by an administrator after resolution.

- D. Mount the AP above the ceiling, the LED orientation does not matter.

Answer: A,B

Explanation:

Line of Sight: For optimal accuracy and stability of location-based services, each access point (AP) should have an unobstructed line of sight to at least two other APs. This ensures robust triangulation and accurate location tracking.

Ceiling Mounting: Mounting APs on the ceiling with the LED facing the floor is recommended.

This position provides the best coverage and performance for both Wi-Fi and BLE signals, essential for reliable location services.
