

New DA0-001 Real Test - Test DA0-001 Vce Free

P.S. Free & New DA0-001 dumps are available on Google Drive shared by Exam-Killer: <https://drive.google.com/open?id=1tm7gJTRO0d0OWAmJ-E7eRSBWYr9rgwwR>

The CompTIA Data+ Certification Exam (DA0-001) Desktop-based practice Exam is ideal for applicants who don't have access to the internet all the time. You can use this CompTIA Data+ Certification Exam (DA0-001) simulation software without an active internet connection. This DA0-001 software runs only on Windows computers. Both practice tests of Exam-Killer i.e. web-based and desktop are customizable, mimic CompTIA DA0-001 real exam scenarios, provide results instantly, and help to overcome mistakes.

CompTIA DA0-001 exam covers a range of topics related to data management, data analysis, and database technologies. It includes topics such as data storage, data security, data analysis techniques, database design, and database management. DA0-001 exam is designed to test the candidate's understanding of these topics and their ability to apply this knowledge in real-world scenarios.

CompTIA DA0-001, also known as the CompTIA Data+ Certification, is a vendor-neutral certification exam that is designed to test the knowledge and skills of individuals working in the field of data management. CompTIA Data+ Certification Exam certification validates the ability of professionals to collect, analyze, and interpret large sets of data and make informed decisions based on the analysis. DA0-001 Exam covers a wide range of topics including data storage, data quality, data visualization, data governance, and data security. It is an ideal certification for individuals who are interested in pursuing a career in data analysis or data management.

Types of DA0-001 Exam Practice Test Questions

What is more, we have free demos are freebies for your information. In case you are tentative about their quality, we give these demos form which you could get the brief outline and questions closely related with the DA0-001 practice materials. Only by practising them on a regular base, you will see clear progress happened on you. Besides, rather than waiting for the gain of our DA0-001 practice materials, you can download them immediately after paying for it, so just begin your journey toward success now.

What are the difficulties of preparing CompTIA DA0-001 Certification

There are many difficulties in preparing CompTIA DA0-001 Certification.

The first difficulty is the lack of time and money to study, it is necessary to read a lot of books and get familiar with the whole process of CompTIA DA0-001 Certification.

Second, the number of questions and answers for each question, there are more than one answer options, it makes you confused about which one is correct.

Third, there are many other problems such as insufficient time to take a certain test or obtain a certain result, so that you have to review CompTIA DA0-001 Certification again. **CompTIA DA0-001 exam dumps** are the only way to pass your exam in your first attempt.

CompTIA Data+ Certification Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which of the following is the most appropriate to consider when creating a schema of a central group broken into detailed subcategories?

- A. Snowflake
- **B. Hierarchical**
- C. Relational
- D. Star

Answer: B

Explanation:

When designing a database schema that represents a central entity with multiple levels of related subcategories, it's crucial to choose a structure that efficiently models these relationships.

Option A: Relational

* Rationale: A relational database organizes data into tables with rows and columns, using keys to establish relationships between tables. While flexible, the relational model doesn't inherently represent hierarchical relationships, making it less ideal for schemas requiring parent-child data representation.

Option B: Hierarchical

* Rationale: The hierarchical database model structures data in a tree-like format, with a single root (central group) and multiple levels of nested subcategories (parent-child relationships). This model is well-suited for scenarios where data is naturally hierarchical, such as organizational charts or file systems.

Reference: The CompTIA Data+ Certification Exam Objectives discuss different database structures, including hierarchical models, emphasizing their applicability in representing data with parent-child relationships.

partners.comptia.org

Option C: Snowflake

Rationale: The snowflake schema is a type of data warehouse schema that normalizes data into multiple related tables, resembling a snowflake shape. It's designed to optimize complex queries in analytical systems but can introduce complexity due to its extensive normalization, making it less suitable for straightforward hierarchical data representation.

Option D: Star

Rationale: The star schema is another data warehouse schema that consists of a central fact table connected to dimension tables. While it simplifies query performance in analytical contexts, it doesn't inherently model hierarchical relationships within the data.

NEW QUESTION # 19

A development company is constructing a new Init in its apartment complex. The complex has the following floor plans:

Using the average cost per square foot of the original floor plans, which of the following should be the price of the Rose Init?

- **A. \$702,500**
- B. \$705,200
- C. \$690,000
- D. \$640,900

Answer: A

Explanation:

The correct answer is D. \$702,500.

To find the price of the Rose unit, we need to use the average cost per square foot of the original floor plans. The average cost per square foot is calculated by dividing the price by the square footage of each unit type. Using the data from the table, we can do the following:

Jasmine: $\$345,000 / 1,000 = \345 per square foot

Orchid: $\$525,000 / 2,000 = \262.5 per square foot

Azalea: $\$375,000 / 1,500 = \250 per square foot

Tulip: $\$450,000 / 1,800 = \250 per square foot

The average cost per square foot of the original floor plans is the mean of these four values, which is $(\$345 + \$262.5 + \$250 +$

$\$250) / 4 = \276.875 per square foot.

To find the price of the Rose unit, we need to multiply the average cost per square foot by the square footage of the Rose unit. The Rose unit has a square footage of 2,535, according to the table. Therefore, the price of the Rose unit is $\$276.875 \times 2,535 = \$702,421.875$.

Rounding to the nearest whole number, we get \$702,500 as the price of the Rose unit.

NEW QUESTION # 20

Chris is building a database to store prices for items on a restaurant menu.

What data type is most appropriate for this field?

- A. Alphanumeric.
- B. Date.
- C. Numeric.
- D. Tags.

Answer: C

Explanation:

Prices are numbers stored in dollars and cents; as such, the data type needs to be capable of storing numbers.

NEW QUESTION # 21

An analyst wants to determine whether a relationship between an individual's age and voting preferences exists. Which of the following is the best statistical method for the analyst to use?

- A. P-value
- B. Z-score
- C. F-test
- D. Chi-squared

Answer: D

Explanation:

The Chi-squared test is used to analyze relationships between two categorical variables. In this case, age groups and voting preferences are both categorical variables, making chi-squared the most appropriate test.

NEW QUESTION # 22

A data analyst needs to present the results of an online marketing campaign to the marketing manager. The manager wants to see the most important KPIs and measure the return on marketing investment. Which of the following should the data analyst use to BEST communicate this information to the manager?

- A. A real-time monitor that allows the manager to view performance the day the campaign was launched
- B. A self-service dashboard that allows the manager to look at the company's annual budget performance
- C. A summary with statistics, conclusions, and recommendations from the data analyst
- D. A spreadsheet of the raw data from all marketing campaigns and channels

Answer: C

NEW QUESTION # 23
