If you are not sure whether you can strictly request yourself, our ED-Con-101 Exam Training can help you. Help is to arrange time for you and provide you with perfect service. What are the advantages of our ED-Con-101 test guide? I hope you can take a moment to find out.

Salesforce Certified Education Cloud Consultant Sample Questions (Q185-Q190):

NEW QUESTION # 185

The Financial Aid department of a college uses Student Success Hub. Students need the ability to schedule an appointment with any financial aid advisor.

Which object should the consultant configure in Student Success Hub to meet this requirement?

- A. Public Groups
- **B. Advising Pools**
- C. EDA Relationships

Answer: B

Explanation:

The consultant should configure the Advising Pools object in Student Success Hub to meet the requirement of allowing students to schedule an appointment with any financial aid advisor for the Financial Aid department that uses Student Success Hub. The Advising Pools object is an object in Student Success Hub that allows users to create groups of advisors who share a common availability, location, or service. The Advising Pools object can help the Financial Aid department meet the requirement of allowing students to schedule an appointment with any financial aid advisor by creating an Advising Pool record for financial aid advisors and associating it with a Service record for financial aid advising. The consultant can also configure other settings such as availability, location, or capacity for the Advising Pool record. Public Groups, EDA Relationships, or Program Plans are not objects that the consultant should configure in Student Success Hub to meet the requirement of allowing students to schedule an appointment with any financial aid advisor for the Financial Aid department that uses Student Success Hub. NEW QUESTION # 186

A university is implementing a student community and rolling it out to 20,000 students. The IT manager is concerned about the large increase in users accessing the system at any one time.

Which step should the consultant recommend?

- A. Use a third-party testing automation tool.
- **B. Develop a Performance Testing Strategy.**
- C. Log a case with Salesforce Support to increase limits.

Answer: B

Explanation:

The step that the consultant should recommend to the IT manager who is concerned about the large increase in users accessing the student community at any one time is B. Develop a Performance Testing Strategy¹. This is because a performance testing strategy can help the IT manager to plan, execute, and analyze tests that measure the system's performance, scalability, reliability, and availability under various user loads and scenarios. A performance testing strategy can also help the IT manager to identify and resolve any performance issues or bottlenecks before the student community goes live, and to ensure that the system meets the expected service level agreements and user satisfaction².

A. Use a third-party testing automation tool and C. Log a case with Salesforce Support to increase limits are not valid steps for this scenario. Using a third-party testing automation tool may be a part of the performance testing strategy, but it is not a step by itself. The IT manager needs to define the objectives, scope, approach, tools, and metrics of the performance testing strategy before choosing and using a testing automation tool². Logging a case with Salesforce Support to increase limits may be a possible action that the IT manager can take after conducting the performance testing and analyzing the results, but it is not a step that the consultant should recommend before the testing. The IT manager needs to determine the current and expected system capacity, throughput, response time, and resource utilization before requesting any limit increases from Salesforce Support³.

NEW QUESTION # 187

A consultant has been working with a university to build a new student services solution using Salesforce. The consultant is preparing for User Acceptance Testing.

Which item should be excluded from the testing scope?

- A. Large data volumes
- **B. User experience in production**
- C. Data load simulation
- D. Average versus peak performance

Answer: B

Explanation:

User experience in production should be excluded from the testing scope for User Acceptance Testing. User Acceptance Testing is a phase of testing that involves end users validating the functionality and usability of the solution in a sandbox environment that mimics the production environment. User Acceptance Testing should not include testing user experience in production, because this can affect live data and operations, and introduce errors or risks. Large data volumes, data load simulation, and average versus peak performance should be included in the testing scope for User Acceptance Testing, because they can help evaluate the performance and scalability of the solution under different scenarios and conditions. NEW QUESTION # 188

A consultant is setting up Student Success Hub for a university. A Contact record has already been created for a student.

Which two steps should a consultant take to set up a student in Student Success Hub?

Choose 2 answers

- A. Create a User record.
- **B. Create an Administrative Account record.**
- **C. Create a Student Case record.**
- D. Create a Household Account record.

Answer: B,C

Explanation:

The consultant should create a Student Case record and an Administrative Account record to set up a student in Student Success Hub. Student Case is an object that represents a student's request for assistance or support from an advisor or a counselor. Student Case can be used to track various information about a student's issue, such as status, priority, category, or resolution. The consultant should create a Student Case record for each student who needs assistance or support from Student Success Hub. Administrative Account is an account model that allows users to store information about individuals who are related to an educational institution, such as students, faculty, staff, or alumni. Administrative Account can be used to track various information about an individual, such as name, email, phone, or address. The consultant should create an Administrative Account record for each student who is enrolled in the educational institution. Creating a User record or a Household Account record are not steps to set up a student in Student Success Hub. Reference:

NEW QUESTION # 189

An Admissions office is using Education Cloud to manage its student application review process. The office needs to make sure students cannot edit applications after the submission deadline.

Which two features could the consultant use to meet this requirement?

- A. Standard Decision Matrix and custom trigger
- B. OmniStudio FlexCard and sharing rule
- **C. OmniStudio FlexCard and validation rule**

Answer: C

Explanation:

Using OmniStudio FlexCard:

OmniStudio FlexCard can be used to create a dynamic user interface that displays the application data in a structured format. This can include conditional logic to show or hide fields based on the submission status of the application.

Applying Validation Rule:

A validation rule can be used to enforce that applications cannot be edited after the submission deadline. This ensures data integrity by preventing changes to the application record once the deadline has passed.

Steps to Implement:

Create a FlexCard:

Navigate to OmniStudio > FlexCards.

Create a new FlexCard that displays application details and includes logic to disable editing past the deadline.

Set Up Validation Rule:

Go to Setup > Object Manager > Application Object.

Create a validation rule to check if the current date is past the submission deadline and prevent edits.

Example validation rule: AND(ISCHANGED([Application].Status), [Application].Status = 'Submitted', TODAY() > [Application].Submission_Deadline__c) Testing:

Test the FlexCard and validation rule to ensure that students cannot edit their applications after the submission deadline.

Ensure the user interface and validation rule work seamlessly together to provide a smooth user experience.
