If you prefer to have your practice online, then you can choose us. NCP-CI-AWS PDF version is printable and you can print them into hard one and take some notes on them. In addition, NCP-CI-AWS exam dumps have free demo for you to have a try, so that you can have a deeper understanding of what you are going to buy. You can receive your download link and password within ten minutes for NCP-CI-AWS Exam Dumps. We have online and offline chat service stuff for NCP-CI-AWS exam materials, and if you have any questions, you can have a conversation with us, and we will give you reply as soon as we can.

Nutanix NCP-CI-AWS Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Prepare the AWS cloud environment: This exam segment evaluates your ability to set up the AWS cloud environment, initiate NC2 service subscription, establish implementation criteria, and recognize networking prerequisites.
Topic 2	<ul style="list-style-type: none">• Managing an NC2 on AWS Environment: This exam component tests your understanding of node and cluster management tasks, along with your ability to oversee cluster and cloud resource health.

Topic 3	<ul style="list-style-type: none"> Deploying an NC2 on AWS Environment: This portion assesses your knowledge of cloud cluster deployment, cloud provider network configuration, and your skills in addressing cluster deployment challenges.
Topic 4	<ul style="list-style-type: none"> Configuring an NC2 on AWS Environment: This section examines your proficiency in setting up cloud networking and security measures, as well as addressing connectivity issues.

Test NCP-CI-AWS Online | Pass-Sure Nutanix NCP-CI-AWS: Nutanix Certified Professional - Cloud Integration - AWS

The Nutanix NCP-CI-AWS certification exam is a valuable asset for beginners and seasonal professionals. If you want to improve your career prospects then NCP-CI-AWS certification is a step in the right direction. Whether you're just starting your career or looking to advance your career, the NCP-CI-AWS Certification Exam is the right choice. With the NCP-CI-AWS certification you can gain a range of career benefits which include credibility, marketability, validation of skills, and access to new job opportunities.

Nutanix Certified Professional - Cloud Integration - AWS Sample Questions (Q102-Q107):

NEW QUESTION # 102

How many Amazon Elastic Block Store(EBS) volumes are attached to each node within an AWS NC2 cluster upon creation.

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

* Upon creation, each node within an AWS NC2 cluster has 3 Amazon Elastic Block Store (EBS) volumes attached.

* These volumes are used for different purposes, such as operating system storage, Nutanix services, and user data storage.

* The number of EBS volumes is designed to ensure adequate storage performance and capacity for the NC2 cluster's operations and workload demands.

Refer to the Nutanix documentation on NC2 cluster setup and AWS EBS volume configurations to confirm the details on the number and purpose of EBS volumes attached to each node.

NEW QUESTION # 103

An administrator has deployed an NC2 cluster in AWS.

The following configuration decisions were made:

Created a new VPC from the NC2 console as part of the deployment

Selected the Public option for prism access policy

Host type selected was i3en,metal

The administrator now has a goal of provision public internet access to a user VM (UVM), web-1, on the Nutanix cluster. The admin can access Prism Element via the public DNS of the Auto-created load balancer.

The administrator tries to create another network load balancer for the web server access. After creating the load balancer and registering web-1's IP address as a target, the administrator finds that the health check for the VM target is failing and the DNS returns as NOT Found message in the browser.

Why is the issue happening?

- A. The administrator needs to provision an application load balancer instead of a network load balancer to allow Internet traffic to access the UVM subnet.
- B. The administrator has not modified the inbound rules under the UVM security group to allow the network load balancer to access the UVM subnet.
- C. The load balancer is still in a Provisioning state.

- **D. The administrator has not assigned a public IP to web-1.**

Answer: D

Explanation:

- * For a VM to be accessible over the internet through a load balancer, the VM itself must have a public IP address.
 - * In this case, the health check for the VM target is failing and the DNS returns a "NOT Found" message because web-1 does not have a public IP assigned.
 - * Without a public IP, the load balancer cannot route traffic to web-1 from the internet.
 - * Assigning a public IP to web-1 ensures that the VM can be accessed via the load balancer, resolving the connectivity issue.
- Refer to the AWS documentation on network load balancers and public IP assignments, and Nutanix documentation on VM network configurations.

NEW QUESTION # 104

An administrator has noticed the company's NC2 free trial expired 60 days ago.

What should the administrator do to continue using all of the NC2 features on existing clusters?

- A. Contact the AWS cloud vendor.
- B. Nothing. The clusters will have full feature support.
- **C. Switch to a paid subscription plan.**
- D. Contact Nutanix support to redeploy the cluster.

Answer: C

Explanation:

After the NC2 free trial expires, to continue using all features of NC2 on existing clusters, the administrator needs to switch to a paid subscription plan.

A paid subscription ensures uninterrupted access to the full range of features and support for NC2 clusters.

Without switching to a paid plan, the features might be limited, and support may not be available, impacting the cluster's operations and management.

Reference:

Refer to the Nutanix billing and subscription documentation for details on switching from a trial to a paid plan and the benefits associated with paid subscriptions.

NEW QUESTION # 105

An administrator is tasked with adding an AWS account to the NC2 console. A requirement is to configure an AWS IAM user with the appropriate permissions.

Which permission must be assigned to the user?

- A. IAMReadOnlyAccess
- B. IAMFullAccess
- **C. AmazonEC2FullAccess**
- D. AmazonEC2ReadOnlyAccess

Answer: C

Explanation:

To add an AWS account to the NC2 console, an AWS IAM user needs to be configured with the appropriate permissions to manage the EC2 resources. The required permission for the IAM user includes full access to manage EC2 instances, volumes, and related resources.

* AmazonEC2FullAccess:

* This permission grants full access to all EC2 resources, including the ability to create, modify, and delete instances, volumes, security groups, and more.

* Essential for NC2 operations to manage the lifecycle of EC2 instances and associated components within the AWS environment.

* Why Not Other Permissions:

* IAMFullAccess: Grants full access to IAM resources but not specifically needed for EC2 operations.

* IAMReadOnlyAccess: Only provides read access to IAM resources, insufficient for managing EC2 instances.

* AmazonEC2ReadOnlyAccess: Provides read-only access to EC2 resources, insufficient for creating or modifying instances and other resources.

NEW QUESTION # 106

The administrator is able to log into the organization's NC2 portal but is unable to see the newly-deployed cluster. What is the most common reason why this would happen?

- A. The administrator was not granted correct permission to the NC2 portal.
- **B. The administrator is logged into the incorrect workspace.**
- C. The administrator was not granted correct permissions to this cluster.
- D. The administrator is logged into an incorrect account.

Answer: B

Explanation:

The Nutanix NC2 portal uses a hierarchical structure consisting of Customers, Organizations, and Workspaces to manage resources. A common point of confusion for administrators is that clusters are localized to specific Workspaces. If an administrator logs into the portal and finds their cluster "missing," the most likely cause is that they are currently viewing a different workspace than the one where the cluster was provisioned. The NC2 console requires users to select the correct context to view their resources. Checking the workspace selector in the portal interface usually resolves this visibility issue, as the account and overall portal permissions are already verified by the successful login.

NEW QUESTION # 107

.....

Business Applications NCP-CI-AWS braindumps as your NCP-CI-AWS exam prep material, we guarantee your success in the first attempt. If you do not pass the Nutanix Certified Professional - Cloud Integration - AWS NCP-CI-AWS certification exam on your first attempt we will give you a full refund of your purchasing fee. If you purchase Nutanix Certified Professional: Business Applications NCP-CI-AWS Braindumps, you can enjoy the upgrade the exam question material service for free in one year.
