

Huawei H35-211_V2.5 Exam Practice Material in Three Diverse Versions

What's more, part of that PrepPDF H35-211_V2.5 dumps now are free: <https://drive.google.com/open?id=1yczEtS6yEgt0NQeCNpJilVJM-WDgl49R>

Contending for the success fruit of H35-211_V2.5 practice exam, many customers have been figuring out the effective ways to pass it. Due to the shortage of useful practice materials or being scanty for them, we listed these traits of our H35-211_V2.5 practice materials. Actually, some practice materials are shooting the breeze about their effectiveness, but our H35-211_V2.5 practice materials are real high quality H35-211_V2.5 practice materials with passing rate up to 98 to 100 percent.

Huawei H35-211_V2.5 exam is a comprehensive, 90-minute exam that consists of 60 multiple-choice questions. The topics covered in the exam are divided into four main categories: Network Access Technologies, Access Network Security, Access Network Planning and Design, and Access Network Maintenance and Troubleshooting. H35-211_V2.5 Exam is designed to test the knowledge and skills of professionals in all areas of network access technology.

On PrepPDF website you can free download part of the exam questions and answers about Huawei Certification H35-211_V2.5 Exam to quiz our reliability. PrepPDF's products can 100% put you onto a success away, then the pinnacle of IT is a step closer to you.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Certification Exam is an essential certification for professionals who want to work with Huawei's network access solutions. HCIP-Access V2.5 certification demonstrates the candidate's ability to work with Huawei's access network solutions and their understanding of the latest access network technologies. HCIP-Access V2.5 certification also validates the candidate's knowledge of network security and their ability to design secure access networks.

Huawei HCIP-Access V2.5 Sample Questions (Q36-Q41):

NEW QUESTION # 36

(Radio) To improve link reliability, the LT device uses two upstream ports 0/19/0 and 0/20/0 to configure a timedelay protection group. Which of the following commands is optional?

- A. huawei(config)#protect-group 0 protect-target sth-nni port workmode timedelay
- B. huawei(protect-group-0)#protect-group enable
- C. huawei(config)#interface giu 0/19huawei(config-if-giu-0/19)#offline-tx-off-time 0 500
- D. huawei(protect-group-0)#protect-group member port 0/19/0 role work

Answer: C

Explanation:

For Huawei uplink protection (STH-NNI port protection) with workmode timedelay, the mandatory steps are:

Create/define the protection group with the protect-target and workmode timedelay; Add member ports with roles (work/protect); Enable the protection group.

Interface-level timers like offline-tx-off-time under the physical interface are not required for standard timedelay protection operation and are therefore optional.

References: HCIP-Access V2.5 Study Guide - Uplink Protection on OLT (STH-NNI, Timedelay Mode); Huawei OLT Interface and Protection Configuration Guide - Port Protection Group (Timedelay) Procedure.

NEW QUESTION # 37

After anti-DoS attack is configured, the system periodically checks all the user ports on the board. If the system detects attacks for multiple consecutive times, the system adds the corresponding port to the blacklist and waits for a random period before a new round of detection to determine whether to remove the port from the blacklist.

- A. TRUE
- B. FALSE

Answer: A

NEW QUESTION # 38

The ports in an OLT upstream protection group must be in the same protection group, and the same port cannot belong to different protection groups.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

For OLT uplink (NNI) protection groups (timedelay/weight, etc.), Huawei requires that each physical port belongs to one protection group only to avoid conflicting switchover control. A member port cannot be part of multiple protection groups simultaneously.

References: HCIP-Access V2.5 Study Guide - OLT Uplink (NNI) Port Protection Configuration Rules and Constraints.

NEW QUESTION # 39

(Single choice) The following statement about defense MAC Spoofing is wrong

- A. Turning off the Anti-MAC Spoofing function can only take out the fixed table items, which does not affect the user's service application, but the service forwarding surface will be interrupted.
- B. MAC Anti-Mac Spoofing features are mutually exclusive with WMAC, SC, PPPOE SMAC features at the VLA level
- C. After the anti-MAC Spoofing function is enabled, the system automatically implements the dynamic binding of the AC address to the service flow
- D. After enabling the Anti-MAC Spoofing function, for IPoE users using fixed IP, the user needs to be statically configured

Answer: A

NEW QUESTION # 40

In the NGN system, the () adopts the packet technology to provide a unified integrated transmission platform with high reliability, QoS guarantee, and large capacity.

- A. Service management layer
- **B. Core switching layer**
- C. Network control layer
- D. Edge access layer

Answer: B

Explanation:

In NGN architectures, services (voice, video, data) converge over a packet-based backbone. The core switching layer provides the unified transport using IP/MPLS and related QoS mechanisms, delivering high reliability and large-capacity switching for all upper-layer services. The control and management layers orchestrate services, while the edge/access layer aggregates users-but the packet-based integrated transmission platform itself is the role of the core.

References: HCIP-Access V2.5 study content (NGN overview, layered architecture, and packet-based core transport responsibilities).
