# Fast and Effective Preparation With 3V0-21.23 VMware vSphere 8.x Advanced Design Exam Questions

BONUS!!! Download part of Test4Sure 3V0-21.23 dumps for free: https://drive.google.com/open?id=1cMAiKcTCjOZCGQ6sR67PFjmCEIaT6l02

For the complete VMware vSphere 8.x Advanced Design exam preparation and success, the Test4Sure 3V0-21.23 exam practice test questions are the best choice. With the VMware 3V0-21.23 Exam Questions, you will get everything that you need to learn, prepare and succeed in the VMware vSphere 8.x Advanced Design certification exam. You must add VMware 3V0-21.23 Exam Questions in your preparation and should not ignore them.

VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	• Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.
Topic 2	• VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.
Topic 3	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."

3V0-21.23 Valid Exam Experience, Real 3V0-21.23 Dumps Free

Our brand has marched into the international market and many overseas clients purchase our 3V0-21.23 valid study guide online. As the saying goes, Rome is not build in a day. The achievements we get hinge on the constant improvement on the quality of our 3V0-21.23 latest study question and the belief we hold that we should provide the best service for the clients. The great efforts we devote to the 3V0-21.23 Valid Study Guide and the experiences we accumulate for decades are incalculable. All of these lead to our success of 3V0-21.23 learning file and high prestige.

VMware vSphere 8.x Advanced Design Sample Questions (Q66-Q71):

NEW QUESTION # 66
An architect is designing a solution based on the following information:
- Each ESXi host has a single physical NIC with two 10 Gbps ports.
- There is a performance-based service-level agreement (SLA) that guarantees 15 Gbps bandwidth for production virtual machines at all times.
- There is no budget to purchase additional hardware.
- The hardware replacement SLA is based on a delivery agreement of two business days.
Which recommendation for the configuration of vSphere High Availability (HA) should the architect include in the design?

- A. Configure vSphere HA Configure two existing data stores for heartbeat Consider an OEM with NIC failure conditions in their Proactive HA plugin
- B. Configure vSphere HA Configure % based admission control Configure two isolation addresses Consider an OEM with NIC failure conditions in their Proactive HA plugin
- C. Configure vSphere HA Set das.IgnoreRedundantNetWarning to true Consider an OEM with NIC failure conditions in their Proactive HA plugin
- D. Configure Proactive HA Automation Level: Automated Remediation: Maintenance mode for all failures Consider an OEM with NIC failure conditions in their Proactive HA plugin

Answer: D

NEW QUESTION # 67
An architect is designing a new vSphere environment with the following resources:
- 600 vCPU
- 5,760 GB RAM
Average resource usage is:
- 60 vCPU
- 1,152 GB RAM
The design must meet the following requirements:
- The environment has the ability to burst by 25%.
- Each host can schedule 36 vCPUs and has 512 GB RAM.
- Management overhead is 20%.
What is the minimum number of hosts required to meet the design requirements?

- A. Two
- B. Four
- C. Five
- D. Three

Answer: B

Explanation:
Take for consideration "Management overhead is 20%."
CPU: $(60+60*0,25+60*0,2)/36 = \sim 2,4$ (round up to 3)
RAM: $(1152+1152*0,25+1152*0,2)/512 = \sim 3,26$ (round up to 4)

NEW QUESTION # 68
Which two vSphere cluster-related design details would an architect document in a physical design? (Choose two.)

- A. The solution will set the isolation.tools.diskshrink,disable advanced setting to true.
- B. The solution will set the das.isolationaddress advanced setting to 192.168.100.2.
- C. The solution will deploy a dedicated VMware Management Cluster into the primary site.
- D. The solution will set the das.usedefaultisolationaddress advanced setting to true.
- E. The solution will configure vSphere High Availability (HA).

Answer: B,E

Explanation:

The solution will set the das.isolationaddress advanced setting to 192.168.100.2.
The das.isolationaddress setting is used to specify an address for use in VMware HA (High Availability) to detect isolation. This setting ensures that the cluster can determine if a host is isolated from the network. The architect would document this setting as part of the cluster's network configuration, particularly to handle the isolation detection for the HA configuration.
The solution will configure vSphere High Availability (HA).
vSphere HA provides high availability for virtual machines by monitoring the health of hosts in the cluster and automatically restarting VMs on other hosts in the event of a host failure. Configuring HA is a key part of designing a resilient vSphere cluster, and this would be documented as a critical part of the physical design to ensure the availability of workloads.

NEW QUESTION # 69
A company has the requirement to ensure that business-critical applications have the necessary network bandwidth to function optimally and maintain a consistent quality of service (QoS).
Which statement would be included in the conceptual design to support this requirement?

- A. The network infrastructure must ensure secure communications and efficiently use available bandwidth.
- B. The distributed switch will use a minimum of 25 Gbps Ethernet.
- C. A distributed switch will be created and Network I/O Control will be enabled.
- D. Network resource pool named "bca-pool-02" is given a reservation quota of 5 Gbit/sec.

Answer: C

Explanation:
This statement supports the requirement for ensuring that business-critical applications have the necessary network bandwidth and maintain consistent quality of service (QoS). By creating a distributed switch and enabling Network I/O Control, you can prioritize network traffic and ensure that the necessary bandwidth is allocated to critical applications, improving their performance and quality of service.

NEW QUESTION # 70
What does a network requirement specify?

- A. The expected number of concurrent users accessing the system.
- B. The desired response time for system interactions.
- C. The network bandwidth and connectivity needs.
- D. The type and size of data storage devices required.

Answer: C

NEW QUESTION # 71
......

As far as the prices of 3V0-21.23 exam dumps are concerned, we ensure you that our VMware vSphere 8.x Advanced Design (3V0-21.23) exam questions prices are entirely affordable for everyone. The real and updated 3V0-21.23 exam dumps are being offered at discounted prices. You can grab this opportunity and download the top-notch and real VMware vSphere 8.x Advanced Design (3V0-21.23) exam questions at discounted prices. Best wishes for the final VMware 3V0-21.23 certification exam!!!
