We own a dedicated team of experts in standby, who make the necessary changes in the material, as and when required.

NCLEX-RN (National Council Licensure Examination for Registered Nurses) is a standardized exam that all nurses in the United States must pass to obtain their nursing license. NCLEX-RN exam is developed and administered by the National Council of State Boards of Nursing (NCSBN) and is designed to test the knowledge and skills necessary for safe and effective nursing practice.

NCLEX-RN exam covers a wide range of nursing topics, including patient care, pharmacology, nursing procedures, health promotion, and disease prevention. It is a comprehensive and rigorous exam that assesses not only a nurse's knowledge, but also their critical thinking, problem-solving, and decision-making abilities. Passing the NCLEX-RN is a significant milestone in a nurse's career, as it demonstrates their competence and readiness to provide safe and effective patient care. NCLEX-RN exam is recognized by all 50 US states and the District of Columbia, as well as several US territories and Canadian provinces, making it a critical step in the nursing licensure process.

The National Council Licensure Examination(NCLEX-RN) is an essential examination for registered nurses in the United States. It is the licensing examination for nurses and is used to assess their competence in providing patient care. The NCLEX-RN is administered by the National Council of State Boards of Nursing (NCSBN) and is required for licensure to practice as a registered nurse in the United States.

## **NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q186-Q191):**

### **NEW QUESTION # 186**

A group of nursing students at a local preschool day care center are going to screen each child's fine and gross motor, language, and social skills. The students will use which one of the most widely used screening tests?

- A. Goodenough Draw-a-Person Screening Test
- B. Caldwell Home Inventory
- C. Revised Prescreening Developmental Questionnaire
- **D. Denver Development Screening Test**

**Answer: D**

Explanation:

Explanation

(A) The Revised Prescreening Developmental Questionnaire is more age appropriate and offers simplified parent scoring and easier comparison. It is used by parents instead of professionals. (B) The Goodenough Draw-a-Person test is used to assess intellectual development. (C) The Denver Developmental Screening Test is one of the most widely used screening tests. It offers a concise, easy-to-administer, systematic approach to assessing the preschool child. It is widely used because of its reliability and validity. (D) The Caldwell Home Inventory is used to assess the home environment in areas of social, emotional, and cognitive supports.

### **NEW QUESTION # 187**

An 80-year-old widow is living with her son and daughter- in-law. The home health nurse has been making weekly visits to draw blood for a prothrombin time test. The client is taking 5 mg of coumadin per day. She appears more debilitated, and bruises are noted on her face. Elder abuse is suspected. Which of the following are signs of persons who are at risk for abusing an elderly person?

- A. A lifelong friend of the client who is often confused
- B. A friend of the family who wants to help but is minimally competent
- **C. A family member who is having marital problems and is regularly abusing alcohol**
- D. A person with adequate communication and coping skills who is employed by the family

**Answer: C**

Explanation:

Explanation/Reference:

Explanation:

(A) This answer is correct. Two risk factors are identified in this answer. (B) This answer is incorrect.

Persons at risk tend to lack communication skills and effective coping patterns. (C) This answer is incorrect. Persons at risk are usually family members or those reluctant to provide care. (D) This answer is incorrect. This individual has a vested interest in providing care.

### **NEW QUESTION # 188**

A 40-year-old client has lived for 8 years with an abusive spouse. She married her husband in her senior year of high school after becoming pregnant. Shortly after the baby was born, he began to physically abuse her. She has attempted to leave him several times, but she has always returned. She is unable to support herself financially, and her husband threatens to kill her if she leaves him. This

time, her husband has beaten her so badly she cannot stop the bleeding from the gash above her eye. She admits her husband caused her injury. In assessing a person after experiencing spousal abuse, which need has the highest priority?

- A. Assess drug and alcohol use.
- B. Assess the history of physical abuse.
- C. Assess the level of anxiety, coping responses, and support systems.
- **D. Assess suicide potential.**

**Answer: D**

Explanation:

Section: Questions Set E

Explanation:

(A) Assessing the level of anxiety, coping responses, and support systems is very important, but not of highest priority at this time. (B) A history of physical abuse is an important part of assessment. The nurses must also always ask if there is abuse of the children. (C) Although all of these answers are very important in assessment, the highest priority is assessment of suicide potential, because this could cause the greatest harm to the client. Feeling there is no other way out, abused spouses may consider suicide. (D) The spouse may be self-medicating herself with alcohol or drugs to escape an awful situation. The abuser may also be abusing drugs or alcohol. If this is so, the nurse should encourage the spouse to seek counseling and not to return to the home.

#### **NEW QUESTION # 189**

A 52-year-old female client is admitted to the hospital in acute renal failure. She has been on hemodialysis for the past 2 years. Stat arterial blood gases are drawn on the client yielding the following results: pH 7.30, PCO<sub>2</sub> 51 mm Hg, HCO<sub>3</sub>, 18 mEq/L, PaO<sub>2</sub>, 84 mm Hg. The nurse would interpret these results as:

- **A. Combined respiratory and metabolic acidosis**
- B. Partially compensated metabolic alkalosis
- C. Respiratory acidosis
- D. Compensated metabolic alkalosis

**Answer: A**

Explanation:

Explanation

(A) Compensated metabolic alkalosis would be reflected by the following: pH within normal limit (7.35-7.45), PCO<sub>2</sub> > 45 mm Hg, HCO<sub>3</sub> > 26 mEq/L. (B) Respiratory acidosis would be reflected by the following: pH < 7.35, PCO<sub>2</sub> > 45 mm Hg, HCO<sub>3</sub> within normal limits (22-26 mEq/L). (C) Partially compensated metabolic alkalosis would be reflected by the following: pH > 7.45, PCO<sub>2</sub> > 45 mm Hg, HCO<sub>3</sub> > 26 mEq/L. (D) Combined respiratory and metabolic acidosis would be reflected by the following: pH < 7.35, PCO<sub>2</sub> > 45 mm Hg, HCO<sub>3</sub> < 22 mEq/L.

#### **NEW QUESTION # 190**

In acute episodes of mania, lithium is effective in 1-2 weeks, but it may take up to 4 weeks, or even a few months, to treat symptoms fully. Sometimes an antipsychotic agent is prescribed during the first few days or weeks of an acute episode to manage severe behavioral excitement and acute psychotic symptoms. In addition to the lithium, which one of the following medications might the physician prescribe?

- A. Sertraline (Zoloft)
- B. Diazepam (Valium)
- C. Alprazolam (Xanax)
- **D. Haloperidol (Haldol)**

**Answer: D**

Explanation:

(A) Diazepam is an antianxiety medication and is not designed to reduce psychotic symptoms. (B) Haloperidol is an antipsychotic medication and may be used until the lithium takes effect. (C) Sertraline is an antidepressant and is used primarily to reduce symptoms of depression. (D) Alprazolam is an antianxiety medication and is not designed to reduce psychotic symptoms.
