The software version is one of the three versions of our D-PWF-OE-00 actual exam, which is designed by the experts from our

company. The functions of the software version are very special. For example, the software version can simulate the real exam environment. If you buy our D-PWF-OE-00 study questions, you can enjoy the similar real exam environment. In addition, the software version of our study materials is not limited to the number of the computer. So do not hesitate and buy our D-PWF-OE-00 Preparation exam, you will benefit a lot from it and pass the D-PWF-OE-00 exam for sure.

EMC Dell PowerFlex Operate Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which PowerFlex model includes integrated compute and storage in a single appliance?

- A. PowerFlex Appliance
- B. PowerFlex Manager
- C. PowerFlex Rack
- D. PowerFlex R

Answer: A

Explanation:

PowerFlex Appliance is the model that offers a flexible, semi-customizable solution that includes both compute and storage resources within a single managed server node (Hyper-Converged Infrastructure).

* PowerFlex Appliance: This offering allows customers to start small and scale. It provides the full PowerFlex software stack pre-installed on qualified hardware (like Dell PowerEdge R650/R750 nodes) that contributes both processing power (Compute) and disk capacity (Storage) to the cluster.

* Differentiation:

* PowerFlex Rack (C) is a fully engineered, rack-scale system including integrated networking (Cisco/Dell switches) and is sold as a complete rack, not just "a single appliance."

* PowerFlex Manager (D) is the management software, not the hardware model.

NEW QUESTION # 40

Which characteristics define a Fault Set in PowerFlex? (Choose two).

- A. Ensures data availability during node failure
- B. Contains metadata for storage pools
- C. Requires a minimum of 3 nodes
- D. Is limited to a single Protection Domain

Answer: A,D

Explanation:

* Is limited to a single Protection Domain (Option D): A Fault Set is a logical subdivision within a Protection Domain. You cannot span a Fault Set across multiple Protection Domains.

* Ensures data availability (Option B): The purpose of a Fault Set is to simulate "Rack Awareness." PowerFlex ensures that copies of data (mirrors) are never placed in the same Fault Set. If Fault Set 1 (Rack 1) fails completely, the system guarantees that the secondary copies of that data exist in Fault Set 2 or 3, keeping the data available.

Note on C: While a cluster using Fault Sets requires 3+ nodes total, the definition of the Fault Set itself is about availability (B) and its hierarchy (D).

NEW QUESTION # 41

What is the primary function of storage data targets in PowerFlex?

- A. Enable deduplication and compression
- B. Manage metadata for nodes
- C. Organize drives for storage pools
- D. Provide access to external storage resources

Answer: C

Explanation:

In PowerFlex terminology, the Storage Data Server (SDS) acts as the "Target" for I/O operations.

* Organize drives for storage pools (Option B): The SDS takes ownership of the local physical drives (NVMe/SSD/HDD) installed in the server. It aggregates these drives and contributes them to the Storage Pool. It handles the reading and writing of data blocks to this physical media.

Incorrect Options: Metadata is managed by the MDM (A). Access to external resources (C) is not the function of the SDS (which provides internal storage). Deduplication (D) is a specific feature, not the primary function of the component.

NEW QUESTION # 42

What is the purpose of integrating CloudLink with PowerFlex?

- A. To configure VLAN tagging for secure communication
- B. To manage metadata for storage pools
- C. To enable secure key management for encryption
- D. To provide real-time monitoring for security events

Answer: C

Explanation:

Dell CloudLink is the security partner for PowerFlex. Its specific role is Key Management for Data at Rest Encryption (D@RE). When PowerFlex uses software-based encryption or Self-Encrypting Drives (SEDs), it needs a secure external entity to hold the "keys to the castle." CloudLink generates, stores, and serves these keys to the PowerFlex nodes upon boot. If a drive is stolen, it cannot be read because the thief does not have access to the CloudLink key manager to unlock the data.

NEW QUESTION # 43

What are the benefits of using Resource Groups in PowerFlex? (Choose two).

- A. Simplifies storage resource management
- B. Allows shared access to storage resources
- C. Enables the creation of virtual machine snapshots
- D. Ensures fault isolation across nodes

Answer: A,B

Explanation:

This question likely refers to PowerFlex Manager (PFxM) concepts, where "Resource Groups" are used to organize hardware.

* Simplifies storage resource management (Option A): Resource Groups allow administrators to logically group disparate hardware (Nodes, Switches) into a single entity. This simplifies operations like upgrades or configuration changes, as you can apply a "Service Template" to the whole group at once.

* Allows shared access (Option D): In a multi-tenant environment, Resource Groups allow you to define which administrators or users have access to specific sets of hardware resources (Role-Based Access Control).

Note: "Fault Isolation" (B) is handled by Protection Domains, not Resource Groups.
