2026 Latest PracticeVCE GH-100 PDF Dumps and GH-100 Exam Engine Free Share: <https://drive.google.com/open?id=1k50UlmUhOvoqkBVnroOFVGLAVUyGEXU>

If you search reliable exam collection materials on the internet and find us, actually you have found the best products for your GH-100 certification exams. We are famous for the high pass rate of our GH-100 exam materials, that's why many old customers trust us and choose us directly before they have GH-100 Exams to attend. Before purchasing we can provide free PDF demo for your downloading so that you can know our product quality deeper and you can purchase GH-100 study guide clearly not only replying on your imagination.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI• CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.
Topic 2	<ul style="list-style-type: none">• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
Topic 3	<ul style="list-style-type: none">• Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.
Topic 4	<ul style="list-style-type: none">• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.

GH-100 Valid Test Practice, GH-100 Reliable Test Review

With our high efficient of GH-100 learning materials you may only need to spend half of your time that you will need if you didn't use our products successfully passing a professional qualification exam. In this way, you will have more time to travel, go to parties and even prepare for another exam. The benefits of GH-100 training torrent for you are far from being measured by money. We have a first-rate team of experts, advanced learning concepts and a complete learning model. The time saved and the guaranteed success for you with our GH-100 learning materials is the greatest return to us.

Microsoft GitHub Administration Sample Questions (Q28-Q33):

NEW QUESTION # 28

What do you need to successfully generate a support bundle on a GitHub Enterprise Server?

- A. A GitHub App with read:org permissions
- **B. Administrator SSH access to the appliance**
- C. A custom GitHub Action in the root repo
- D. Approval from GitHub Support

Answer: B

Explanation:

You must have administrator-level SSH access to the GitHub Enterprise Server appliance so you can run the `ghe-support-bundle` command over SSH and capture the bundle locally.

NEW QUESTION # 29

Your enterprise has multiple organizations, and you want to ensure consistent security policies across all teams. Which feature should you use?

- A. Assigning admin permissions to all team members.
- B. Organization-specific teams with custom policies.
- **C. Enterprise-level teams with inherited enterprise policies.**
- D. Outside collaborators for all repositories.

Answer: C

Explanation:

By using enterprise-level teams with inherited enterprise policies, you can group members across all your organizations and enforce the same security settings globally - ensuring every team abides by the enterprise's mandatory policies.

NEW QUESTION # 30

What is the effect of enforcing a policy that restricts GitHub Actions to only those created by the enterprise?

- **A. Only actions created within the enterprise are allowed**
- B. Marketplace actions are allowed only with SSO enabled
- C. Actions can only be triggered by organization members
- D. All public actions are allowed

Answer: A

Explanation:

When you enforce the "Allow enterprise actions and reusable workflows" policy, GitHub will block all workflows from using actions or reusable workflows that aren't defined in a repository within your enterprise - so only actions created inside your enterprise are allowed.

NEW QUESTION # 31

What is the key benefit of using a GitHub security advisory within a repository?

- **A. It allows maintainers to privately disclose, discuss, and publish vulnerabilities.**
- B. It flags all forks of the repository as vulnerable.
- C. It prevents users from cloning the repository until issues are resolved.
