This ServiceNow CIS-Discovery Pdf Format is printable to read real questions manually. We update our pdf questions collection regularly to match the updates of the ServiceNow CIS-Discovery real exam.

ServiceNow CIS-Discovery : Certified Implementation Specialist - Discovery exam comprises 60 multiple-choice questions, which must be completed within 90 minutes. The passing score is 70%, and the exam is proctored. CIS-Discovery exam is divided into three distinct sections: Discovery Capabilities, ServiceNow Platform Management, and Discovery Implementation.

The CIS-Discovery Exam is designed to test the candidate's knowledge and skills in ServiceNow Discovery, which is a critical component of ITOM. CIS-Discovery exam covers a wide range of topics, including the basics of ServiceNow Discovery, how to configure and manage Discovery, and how to use Discovery to automate the identification and tracking of IT assets. CIS-Discovery Exam is also designed to test the candidate's ability to troubleshoot issues that may arise during the Discovery process.

The CIS-Discovery certification exam is designed to test IT professionals' skills and knowledge in implementing and configuring ServiceNow Discovery to discover and manage IT assets in a networked environment. CIS-Discovery exam assesses the candidates' abilities to identify and configure the required components of ServiceNow Discovery, including the MID Server, probes, sensors, and patterns. Additionally, the exam also tests the candidates' understanding of the discovery process, data collection, and data quality management.

Response:

- A. No, only one port per port probe can be configured
- B. Yes

Answer: B

NEW QUESTION # 40

Which method is used by Discovery to determine if a Host IP is active or alive?

- A. Port Scan
- B. Classification
- C. Ping
- D. Traceroute

Answer: B

NEW QUESTION # 41

Which of the below choices are kinds of variables used in discovery patterns? (Choose three.)

- A. Global
- B. Prefix
- C. CI attributes
- D. Fixed
- E. Temporary

Answer: A,C,E

Explanation:

Variables are used in discovery patterns to store and manipulate data that is collected or calculated during the discovery process. There are three kinds of variables used in discovery patterns12:

* CI attributes: These are variables that correspond to the attributes of the configuration item (CI) type that the pattern is discovering. For example, name, serial_number, manufacturer, etc. CI attributes are used to populate the CI record in the CMDB with the information gathered by the pattern.

* Temporary: These are variables that are created and used within the pattern, but are not stored in the CMDB. For example, $result, $output, $user_var, etc. Temporary variables are used to store and manipulate data such as the output of a command, the value of a parameter, or the result of a calculation.

* Global: These are variables that are defined in the global scope and can be accessed by any pattern. For example, $mid, $target, $ip_address, etc. Global variables are used to store and access data that is common to all patterns, such as the MID Server, the target device, or the IP address.

NEW QUESTION # 42

Active discovery errors with help links are displayed as part of the:

Response:

- A. Discovery Schedule
- B. IP Address Failure Report
- C. Discovery Dashboard
- D. MID Server Dashboard

Answer: C

NEW QUESTION # 43

Which of the choices below best represent key capabilities of a ServiceNow ITOM Enterprise solution?
(Choose two.)

- A. Manage Hybrid Clouds
- B. Proactively Eliminate Service Outages
- C. Create an Engaging User Experience
- D. Build New Apps Fast

Answer: A,B

Explanation:
Based on the web search results from the search_web tool, the following choices best represent key capabilities of a ServiceNow ITOM Enterprise solution:
* Manage Hybrid Clouds: ServiceNow ITOM enables organizations to gain visibility into their IT environment, on-premises to cloud, and see the impact of their applications on business services12. It also helps to plan, track, and secure cloud implementation through best-practice governance1. Four apps comprise Cloud Accelerate to help prepare for cloud migration, streamline provisioning requests, and manage cloud resources1.
* Proactively Eliminate Service Outages: ServiceNow ITOM helps to predict issues, reduce user impact, and automate resolutions with predictive AIOps and automation13. It analyzes telemetry and log data using AI to reduce noise, expedite mapping and predict issues1. It also delivers proactive digital operations with real-time log data to solve problems quickly1.
The other choices are not specific to ServiceNow ITOM Enterprise solution, but rather general features of the ServiceNow platform. The ServiceNow platform allows users to create an engaging user experience with intuitive interfaces and workflows. It also enables users to build new apps fast with low-code development tools and pre-built components.
