The Deep-Security-Professional vce braindumps of our DumpsReview contain questions and correct answers and detailed answer explanations and analysis, which apply to any level of candidates. Our IT experts has studied Trend real exam for long time and created professional study guide. So you will pass the test with high rate If you practice the Deep-Security-Professional Dumps latest seriously and skillfully.

There are many merits of our product on many aspects and we can guarantee the quality of our Trend Micro Certified Professional for Deep Security Deep-Security-Professional practice engine. Firstly, our experienced expert team compile them elaborately based on the real exam. Secondly, both the language and the content of our Trend Deep-Security-Professional Study Materials are simple.

Latest Deep-Security-Professional Test Cost | Deep-Security-Professional Study Demo

Our products boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our Deep-Security-Professional study materials. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam. Our products also boost multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the Deep-Security-Professional Study Materials efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the Trend Micro Certified Professional for Deep Security study materials.

Trend Micro Certified Professional for Deep Security Sample Questions (Q27-Q32):

NEW QUESTION # 27
What is the purpose of the Deep Security Relay?

- A. Deep Security Relays are responsible for retrieving security and software updates and distributing them to Deep Security Manager, Agents and Virtual Appliances.

- B. Deep Security Relays distribute load to the Deep Security Manager nodes in a high-availability implementation.
- C. Deep Security Relays maintain the caches of policies applied to Deep Security Agents on protected computers to improve performance.
- D. Deep Security Relays forward policy details to Deep Security Agents and Virtual Appliances immediately after changes to the policy are applied.

Answer: A

Explanation:
Deep Security Relays download security and software updates from Trend Micro's servers (or a local update source) and distribute those updates to Agents, Virtual Appliances, and Managers. This reduces bandwidth and centralizes update management.
From the official documentation:
"Relays are responsible for retrieving security and software updates and distributing them to Deep Security Manager, Agents, and Virtual Appliances." References:
Trend Micro Deep Security Help: What are Relays?
Deep Security Administrator's Guide: Relay Overview

NEW QUESTION # 28
Which of the following VMware components is not required to enable agentless protection using Deep Security.

- A. VMware vCenter
- B. VMware vRealize
- C. VMware NSX
- D. VMware ESXi

Answer: B

Explanation:
For agentless protection (such as with VMware NSX integration), vCenter, ESXi, and NSX are required, as they provide the virtualization platform, centralized management, and security services integration, respectively. VMware vRealize is a cloud automation and management suite and is not required for Deep Security's agentless protection.
From the official documentation:
"Agentless protection requires VMware NSX, ESXi hypervisors, and vCenter Server. VMware vRealize is not required for Deep Security agentless deployment." Option C is correct.
Options A, B, D are required components for agentless integration.

NEW QUESTION # 29
Which of the following statements is FALSE regarding Firewall rules using the Bypass action?

- A. Firewall rules using the Bypass action allow incoming traffic to skip both Firewall and Intrusion Prevention analysis.
- B. Firewall rules using the Bypass action do not generate log events.
- C. Applying a Firewall rule using the Bypass action to traffic in one direction automatically applies the same action to traffic in the other direction.
- D. Firewall rules using the Bypass action can be optimized, allowing traffic to flow as effi-ciently as if a Deep Security Agent was not there.

Answer: C

Explanation:
The Bypass action is directional; it does not automatically apply to both directions. If you wish to bypass both directions, you must create separate rules for each. Options B, C, and D are true-bypass skips firewall and IPS analysis, does not log events, and optimizes traffic flow.
Reference:
Trend Micro Deep Security Administrator's Guide, Firewall Bypass Action Section

The "Protection Source when in Combined Mode" settings are configured for a virtual machine as in the exhibit. You would like to enable Application Control on this virtual machine, but there is no corresponding setting displayed. Why?

- A. In the example displayed in the exhibit, no activation code was entered for Application Control. Since the Protection Module is not licensed, the corresponding settings are not displayed.
- B. In the example displayed in the exhibit, the Application Control Protection Module has not yet been enabled. Once it is enabled for this virtual machine, the corresponding settings are displayed.
- C. These settings are used when both a host-based agent and agentless protection are available for the virtual machine. Since Application Control is not supported in agentless installations, there is no need for the setting.
- D. In the example displayed in the exhibit, the VMware Guest Introspection Service has not yet been installed. This service is required to enable Application Control in agentless installations.

Answer: C

Explanation:
The "Protection Source when in Combined Mode" configuration appears only for features supported in both agent-based and agentless (VMware NSX) modes.
Application Control is not available in agentless installations-it is only supported with host-based (agent) deployment. Therefore, there is no setting for Application Control in this combined mode view, as agentless protection cannot provide this module.
Options A and C are not correct-licensing and module enablement are not the reason for the absence here; it is due to module capability in agentless mode.
Option D is incorrect-VMware Guest Introspection is not relevant to Application Control's availability.

Trend Micro Deep Security 20 LTS Administrator's Guide: Application Control Module Trend Micro Deep Security Help: Supported Features in Agentless Mode

Which of the following statements is correct regarding the policy settings displayed in the exihibit?
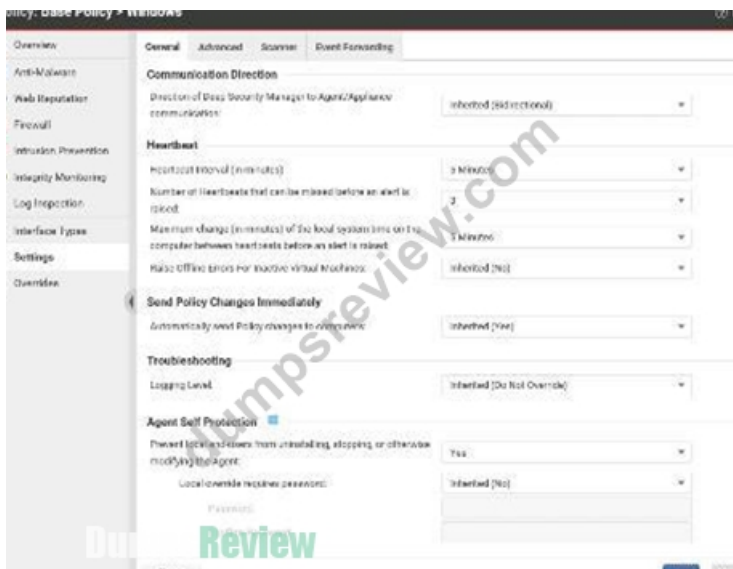

- A. The Heartbeat interval value displayed in this policy is inherited from the parent policy
- B. Deep Security Manager will refresh the policy details on the Deep Security Agents using this policy every 5 minutes.
- C. Deep Security Agents using the displayed policy will send event details to Deep Security Manager every 5 minutes.
- D. All Deep Security Agents will send event details to Deep Security Manager every 5 minutes.

Answer: C

Explanation:
The Heartbeat interval is explicitly set to "5 Minutes" (not inherited, as the drop-down does not show
"Inherited" for this field).
Only agents assigned to this specific policy will send heartbeat (event, status, and update information) to Deep Security Manager
every 5 minutes.
Option C is incorrect because only agents using this policy will follow this interval, not all agents.
Option D is incorrect; the heartbeat governs communication initiated by the agent, not a policy push by the manager.
Option A is incorrect; it is not inherited.
