

Admirable AZ-305 Exam Questions: Designing Microsoft Azure Infrastructure Solutions bring you reliable Guide Materials

What's more, part of that TestkingPass AZ-305 dumps now are free: <https://drive.google.com/open?id=1QxUx0zy375VYMzvsfi6NWQ0ecSXlh8WA>

Achieving success in the Microsoft AZ-305 certification exam opens doors to lucrative job opportunities and career advancements. The Designing Microsoft Azure Infrastructure Solutions (AZ-305) credential is highly valuable in today's industry. However, many candidates face the frustration of exam failure and wasted time and resources by relying on outdated Microsoft AZ-305 Practice Questions. To save both time and money, it is crucial to prepare with the most up-to-date and reliable AZ-305 exam questions.

For your satisfaction, TestkingPass provides you the facility of free AZ-305 brain dumps demo. You can easily download them from our website and examine their quality and usefulness. Compare them with AZ-305 brain dumps and others available with you. You will find these amazing AZ-305 test dumps highly compatible with your needs as well as quite in line with the Real AZ-305 Exam Questions. TestkingPass AZ-305 exam dumps promise you an outstanding exam success with an assurance of 100% money refund, if its dumps fail to help you pass the exam with flying colors.

AZ-305 Reliable Test Test - AZ-305 Knowledge Points

We provide the free demos before the clients decide to buy our AZ-305 study materials. The clients can visit our company's website to have a look at the demos freely. Through looking at the demos the clients can understand part of the contents of our AZ-305 study materials, the form of the questions and answers and our software, then confirm the value of our AZ-305 Study Materials. If the clients are satisfied with our AZ-305 study materials they can purchase them immediately. They can avoid spending unnecessary money and choose the most useful and efficient AZ-305 study materials.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q267-Q272):

NEW QUESTION # 267

You have the Free edition of a hybrid Azure Active Directory (Azure AD) tenant. The tenant uses password hash synchronization. You need to recommend a solution to meet the following requirements:

Prevent Active Directory domain user accounts from being locked out as the result of brute force attacks targeting Azure AD user accounts.

Block legacy authentication attempts to Azure AD integrated apps.

Minimize costs.

What should you recommend for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To protect against brute force attacks:

- Azure AD Password Protection
- Conditional access policies
- Pass-through authentication
- Smart lockout

To block legacy authentication attempts:

- Azure AD Application Proxy
- Azure AD Password Protection
- Conditional access policies
- Enable Security defaults

Answer:

Explanation:

Explanation

Graphical user interface, text, application Description automatically generated

To protect against brute force attacks:

- Azure AD Password Protection
- Conditional access policies
- Pass-through authentication
- Smart lockout

To block legacy authentication attempts:

- Azure AD Application Proxy
- Azure AD Password Protection
- Conditional access policies
- Enable Security defaults

Box 1: Smart lockout

Smart lockout helps lock out bad actors that try to guess your users' passwords or use brute-force methods to get in. Smart lockout can recognize sign-ins that come from valid users and treat them differently than ones of attackers and other unknown sources. Attackers get locked out, while your users continue to access their accounts and be productive.

Box 2: Conditional access policies

If your environment is ready to block legacy authentication to improve your tenant's protection, you can accomplish this goal with Conditional Access.

How can you prevent apps using legacy authentication from accessing your tenant's resources? The recommendation is to just block them with a Conditional Access policy. If necessary, you allow only certain users and specific network locations to use apps that are based on legacy authentication.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-smart-lockout>

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/block-legacy-authentication>

NEW QUESTION # 268

You need to implement the Azure RBAC role assignment. The solution must meet the authentication and authorization requirements. How many assignment should you configure for the Network Contributor role for Role1? To answer, select appropriate in the answer area.

NOTE:

Answer:

Explanation:

Explanation:

NEW QUESTION # 269

You plan to develop a new app that will store business critical data. The app must meet the following requirements:

- * Prevent new data from being modified for one year.
- * Maximize data resiliency.
- * Minimize read latency.

What storage solution should you recommend for the app? To answer, select the appropriate options in the answer area. NOTE:

Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 270

You need to configure an Azure policy to ensure that the Azure SQL databases have TDE enabled. The solution must meet the security and compliance requirements.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Scenario: All Azure SQL databases in the production environment must have Transparent Data Encryption (TDE) enabled.

Step 1: Create an Azure policy definition that uses the deployIfNotExists identity.

The first step is to define the roles that deployIfNotExists and modify needs in the policy definition to successfully deploy the content of your included template.

Step 2: Create an Azure policy assignment

When creating an assignment using the portal, Azure Policy both generates the managed identity and grants it the roles defined in roleDefinitionIds.

Step 3: Invoke a remediation task

Resources that are non-compliant to a deployIfNotExists or modify policy can be put into a compliant state through Remediation.

Remediation is accomplished by instructing Azure Policy to run the deployIfNotExists effect or the modify operations of the assigned policy on your existing resources and subscriptions, whether that assignment is to a management group, a subscription, a resource group, or an individual resource.

During evaluation, the policy assignment with deployIfNotExists or modify effects determines if there are non-compliant resources or subscriptions. When non-compliant resources or subscriptions are found, the details are provided on the Remediation page.

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/how-to/remediate-resources>

NEW QUESTION # 271

You have an Azure subscription named Sub1 that is linked to an Azure AD tenant named contoso.com.

You plan to implement two ASP.NET Core apps named App1 and App2 that will be deployed to 100 virtual machines in Sub1.

Users will sign in to App1 and App2 by using their contoso.com credentials.

App1 requires read permissions to access the calendar of the signed-in user. App2 requires write permissions to access the calendar of the signed-in user.

You need to recommend an authentication and authorization solution for the apps. The solution must meet the following requirements:

- * Use the principle of least privilege.
- * Minimize administrative effort

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
