CMT Association CMT Level 1 Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59
_____ give companies the option to buy them back before maturity.

- A. Treasury bills
- B. Putable bonds
- C. Convertible bonds
- D. Callable bonds

Answer: D

Explanation:
Detailed Explanation:
Callable bonds contain a provision allowing the issuer (company) to "call" (redeem/buy back) the bond from the investor prior to the maturity date, usually when interest rates drop.

NEW QUESTION # 60
Which of the following factors would increase the predictive power of the candlestick dark cloud cover pattern?

- A. The second candle does not penetrate deeply into the first candle
- B. Heavy volume at the opening of the second day indicates a buying climax
- C. The dark cloud cover occurs in the middle of a trading range
- D. During a downtrend, a white real body with shaven head and bottom is followed by a black body also with a shaven head and bottom

Answer: B

Explanation:
Detailed Explanation:
Dark Cloud Cover is a bearish reversal. If the second day opens on heavy volume (a gap up open), it suggests a "buying climax" or a trap where the last buyers rushed in, only to have the price collapse and close lower.
This increases the bearish probability.

NEW QUESTION # 61
Which of the following is the best suited to decide whether a stock is underperforming a market or not?

- A. Divergence studies
- B. Moving averages313233
- C. Relative strength index
- D. Relative strength

Answer: D

Explanation:
Detailed Explanation:373839
Comparative Relative Strength (a ratio line of Stock divided by Index) is the specific tool designed to show performance relative to a benchmark. RSI (Relative Strength Index) is a momentum oscil40lator and does not compare the stock to an external market.4142

NEW QUESTION # 62
The concept that best helps quantify the risk of a trading system is the:

- A. Length of average winning trade
- B. Maximum favorable excursions
- C. Maximum cumulative drawdown
- D. Longest flat time

Answer: C

Explanation:
Detailed Explanation:
Maximum Cumulative Drawdown measures the largest peak-to-trough decline in account equity. It is the standard metric for assessing the "pain" or risk of ruin associated with a specific trading strategy.

NEW QUESTION # 63
Which of the following is an INCORRECT interpretation of the put-call ratio?

- A. When call volume exceeds put volume, this has bullish future implications for the market
- B. When options traders are bullish, call volume exceeds put volume
- C. A very high ratio indicates an oversold market
- D. A low ratio is considered a warning of an overbought market

Answer: A

Explanation:
Detailed Explanation:
The Put-Call Ratio is a contrarian indicator.
* High Calls (Low Ratio) = Crowd is Bullish.
* Contrarian Implication = Bearish.
Therefore, statement D ("has bullish future implications") is the INCORRECT interpretation. Extreme call buying usually warns of a top24.

NEW QUESTION # 64
