Then, the difficult questions of the SPLK-2002 Study Materials will have vivid explanations. So you will have a better understanding after you carefully see the explanations.

## Splunk Enterprise Certified Architect Sample Questions (Q185-Q190):

### NEW QUESTION # 185

(If the `maxDataSize` attribute is set to `auto_high_volume` in `indexes.conf` on a 64-bit operating system, what is the maximum hot bucket size?)

- A. 750 MB
- **B. 10 GB**
- C. 4 GB
- D. 1 GB

**Answer: B**

Explanation:

According to the `indexes.conf` reference in Splunk Enterprise, the parameter `maxDataSize` controls the maximum size (in GB or MB) of a single hot bucket before Splunk rolls it to a warm bucket. When the value is set to `auto_high_volume` on a 64-bit system,

Splunk automatically sets the maximum hot bucket size to 10 GB.

The "auto" settings allow Splunk to choose optimized values based on the system architecture:

\* auto: Default hot bucket size of 750 MB (32-bit) or 10 GB (64-bit).

\* auto\_high\_volume: Specifically tuned for high-ingest indexes; on 64-bit systems, this equals 10 GB per hot bucket.

\* auto\_low\_volume: Uses smaller bucket sizes for lightweight indexes.

The purpose of larger hot bucket sizes on 64-bit systems is to improve indexing performance and reduce the overhead of frequent bucket rolling during heavy data ingestion. The documentation explicitly warns that these sizes differ on 32-bit systems due to memory addressing limitations.

Thus, for high-throughput environments running 64-bit operating systems, auto\_high\_volume = 10 GB is the correct and Splunk-documented configuration.

### NEW QUESTION # 186

Which Splunk internal index contains license-related events?

- A. \_audit
- B. \_introspection
- C. \_license
- D. **\_internal**

**Answer: D**

### NEW QUESTION # 187

Consider a use case involving firewall data. There is no Splunk-supported Technical Add-On, but the vendor has built one. What are the items that must be evaluated before installing the add-on? (Select all that apply.)

- A. **Validate if this Technical Add-On enables event data for a data model.**
- B. Verify if Technical Add-On needs to be installed onto both a search head or indexer.
- C. **Identify number of scheduled or real-time searches.**
- D. Identify the maximum number of forwarders Technical Add-On can support.

**Answer: A,C**

Explanation:

A Technical Add-On (TA) is a Splunk app that contains configurations for data collection, parsing, and enrichment. It can also enable event data for a data model, which is useful for creating dashboards and reports.

Therefore, before installing a TA, it is important to identify the number of scheduled or real-time searches that will use the data model, and to validate if the TA enables event data for a data model. The number of forwarders that the TA can support is not relevant, as the TA is installed on the indexer or search head, not on the forwarder. The installation location of the TA depends on the type of data and the use case, so it is not a fixed requirement

### NEW QUESTION # 188

Which of the following should be included in a deployment plan?

- A. **Current and future topology diagrams of the IT environment.**
- B. **Business continuity and disaster recovery plans.**
- C. A comprehensive list of stakeholders, either direct or indirect.
- D. **Current logging details and data source inventory.**

**Answer: A,B,D**

Explanation:

Explanation

A deployment plan should include business continuity and disaster recovery plans, current logging details and data source inventory,

and current and future topology diagrams of the IT environment. These elements are essential for planning, designing, and implementing a Splunk deployment that meets the business and technical requirements. A comprehensive list of stakeholders, either direct or indirect, is not part of the deployment plan, but rather part of the project charter. For more information, see Deployment planning in the Splunk documentation.

#### NEW QUESTION # 189

Which of the following should be done when installing Enterprise Security on a Search Head Cluster? (Select all that apply.)

- **A. Install Enterprise Security on the deployer.**
- B. Copy the Enterprise Security configurations to the deployer.
- **C. Use the deployer to deploy Enterprise Security to the cluster members.**
- D. Install Enterprise Security on a staging instance.

**Answer: A,C**
