

100% Pass Quiz 2026 Microsoft Marvelous Exam AZ-204 Bootcamp

What's more, part of that Test4Cram AZ-204 dumps now are free: https://drive.google.com/open?id=1kvCHUVd5UfKGEYuzDP_LS7QDVh-9j743

With the rise of internet and the advent of knowledge age, mastering knowledge about computer is of great importance. This AZ-204 exam is your excellent chance to master more useful knowledge of it. Up to now, No one has questioned the quality of our AZ-204 training materials, for their passing rate has reached up to 98 to 100 percent. Our Microsoft Azure study dumps are priced reasonably so we made a balance between delivering satisfaction to customers and doing our own jobs. So in this critical moment, our AZ-204 real materials will make you satisfied. Our AZ-204 exam materials can provide integrated functions. You can learn a great deal of knowledge and get the certificate of the exam at one order like win-win outcome at one try.

Microsoft AZ-204 Exam consists of multiple-choice questions, together with hands-on, practical tasks carried out in a virtual lab setting. Candidates have the option of completing the exam online, from the comfort of their workstation. Alternatively, Microsoft also offers the option to attend training sessions to help prepare for the exam. The official courses cover all of the exam's objectives and offer hands-on experience by using Microsoft Azure environment via labs that replicate real-world scenarios.

Free PDF Accurate Microsoft - AZ-204 - Exam Developing Solutions for Microsoft Azure Bootcamp

If you are considering to get help from the exam braindumps for you to pass the exam, you need to get a reliable and authentic valid AZ-204 study material, which will help you to pass exams with an ease. But, this is also a must have updated AZ-204 exam questions to save you from the tedious task of collecting resources from multiple sources. And at the same time, the AZ-204 learning guide must stand the test of the market and can make the customers understood by all over the world. And these are exactly the advantages of our AZ-204 practice engine has. Just come and have a try!

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q138-Q143):

NEW QUESTION # 138

You are developing a solution to store documents in Azure Blob storage. Customers upload documents to multiple containers. Documents consist of PDF, CSV, Microsoft Office format, and plain text files.

The solution must process millions of documents across hundreds of containers. The solution must meet the following requirements:

- * Document must be categorized by a customer identifier as they are uploaded to the storage account.
- * Allow filtering by the customer identifier.
- * Allow searching of information contained within a document.
- * Minimize costs.

You created and configure a standard general-purpose v2 storage account to support the solution.

You need to implement the solution.

NOTE: Each correct selection is worth one point.

Answer Area

Requirement

Search and filter by customer identifier.

Search information inside documents.

Solution

- Azure Cognitive Search
- Azure Blob index tags
- Azure Blob inventory policy
- Azure Blob metadata

Microsoft

Answer:

Explanation:

Answer Area

Requirement

Search and filter by customer identifier.

Search information inside documents.

Solution

- Azure Cognitive Search
- Azure Blob index tags
- Azure Blob inventory policy
- Azure Blob metadata

Microsoft

Explanation

Azure Blob Index tags:

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-index-how-to?tabs=azure-portal> Azure Cognitive Search:
Search inside documents

NEW QUESTION # 139

You are developing an ASP.NET Core app that includes feature flags which are managed by Azure App Configuration. You create an Azure App Configuration store named AppFeatureFlagStore that contains a feature flag named Export.

You need to update the app to meet the following requirements:

- * Use the Export feature in the app without requiring a restart of the app.
- * Validate users before users are allowed access to secure resources.
- * Permit users to access secure resources.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```

public void Configure(IApplicationBuilder app, IWebHostEnvironment env)
{
    if (env.IsDevelopment())
    {
        app.UseDeveloperExceptionPage();
    }
    else
    {
        app.UseExceptionHandler("/Error");
    }
}

```

Microsoft

```

app. UseAuthentication ();
app. UseStaticFiles ();
app. UseSession ();
app. UseCookiePolicy ();

app. UseAuthorization ();
app. UseHttpsRedirection ();
app. UseSession ();
app. UseCookiePolicy ();

app. UseAzureAppConfiguration ();
app. UseRequestLocalization ();
app. UseCors ();
app. UseStaticFiles ();

app.UseEndpoint(endpoints =>
{
    endpoints.MapRazorPages();
});

```

Answer:

Explanation:

Answer Area

```
public void Configure(IApplicationBuilder app, IWebHostEnvironment env)
{
    if (env.IsDevelopment())
    {
        app.UseDeveloperExceptionPage();
    }
    else
    {
        app.UseExceptionHandler("/Error");
    }
}

app. [dropdown] ();
    UseAuthentication
    UseStaticFiles
    UseSession
    UseCookiePolicy

app. [dropdown] ();
    UseAuthorization
    UseHttpsRedirection
    UseSession
    UseCookiePolicy

app. [dropdown] ();
    UseAzureAppConfiguration
    UseRequestLocalization
    UseCors
    UseStaticFiles

app.UseEndpoint(endpoints =>
{
    endpoints.MapRazorPages();
});
}
```

Explanation

```

}
app. UseAuthentication ();
app. UseStaticFiles ();
app. UseSession ();
app. UseCookiePolicy ();
app. UseAuthorization ();
app. UseHttpsRedirection ();
app. UseSession ();
app. UseCookiePolicy ();
app. UseAzureAppConfiguration ();
app. UseRequestLocalization ();
app. UseCors ();
app. UseStaticFiles ();
app.UseEndpoint(endpoints =>
{
    endpoints.MapRazorPages();
});
}

```

Box 1: UseAuthentication

Need to validate users before users are allowed access to secure resources.

UseAuthentication adds the AuthenticationMiddleware to the specified IApplicationBuilder, which enables authentication capabilities.

Box 2: UseAuthorization

Need to permit users to access secure resources.

UseAuthorization adds the AuthorizationMiddleware to the specified IApplicationBuilder, which enables authorization capabilities.

Box 3: UseStaticFiles

Need to use the Export feature in the app without requiring a restart of the app.

UseStaticFiles enables static file serving for the current request path Reference:

<https://docs.microsoft.com/en-us/dotnet/api/microsoft.aspnetcore.builder.iapplicationbuilder?view=aspnetcore-5>.

NEW QUESTION # 140

You are developing a serverless Java application on Azure. You create a new Azure Key Vault to work with secrets from a new Azure Functions application.

The application must meet the following requirements:

Reference the Azure Key Vault without requiring any changes to the Java code.

Dynamically add and remove instances of the Azure Functions host based on the number of incoming application events.

Ensure that instances are perpetually warm to avoid any cold starts.

Connect to a VNet.

Authentication to the Azure Key Vault instance must be removed if the Azure Function application is deleted.

You need to grant the Azure Functions application access to the Azure Key Vault.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Create a user-assigned managed identity for the application.

Create the Azure Functions app with a Premium plan type.

Create an access policy in Azure Key Vault for the application identity.

Create an SSL certification in Azure Key Vault for the application identity.

Create the Azure Functions app with an App Service plan type.

Create the Azure Functions app with a Consumption plan type.

Create a system-assigned managed identity for the application.

Answer Area

Answer:

Explanation:

The screenshot shows the 'Answer Area' with the Microsoft logo. A red dashed box highlights the following sequence of actions:

- Create the Azure Functions app with a Consumption plan type.
- Create a user-assigned managed identity for the application.
- Create an access policy in Azure Key Vault for the application identity.

The other actions listed in the 'Actions' section are not highlighted.

Explanation:

Create the Azure Functions app with a Consumption plan type.

Create a user-assigned managed identity for the application.

Create an access policy in Azure Key Vault for the application identity.

Step 1: Create the Azure Functions app with a Consumption plan type.

Use the Consumption plan for serverless.

Step 2: Create a system-assigned managed identity for the application.

Create a system-assigned managed identity for your application.

Key Vault references currently only support system-assigned managed identities. User-assigned identities cannot be used.

Step 3: Create an access policy in Key Vault for the application identity.

Create an access policy in Key Vault for the application identity you created earlier. Enable the "Get" secret permission on this policy. Do not configure the "authorized application" or applicationId settings, as this is not compatible with a managed identity.

<https://docs.microsoft.com/en-us/azure/app-service/app-service-key-vault-references>

NEW QUESTION # 141

You are developing an Azure solution to collect inventory data from thousands of stores located around the world. Each store location will send the inventory data hourly to an Azure Blob storage account for processing.

The solution must meet the following requirements:

- * Begin processing when data is saved to Azure Blob storage.
- * Filter data based on store location information.
- * Trigger an Azure Logic App to process the data for output to Azure Cosmos DB.
- * Enable high availability and geographic distribution.
- * Allow 24-hours for retries.
- * Implement an exponential back off data processing.

You need to configure the solution.

What should you implement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Technologies	Answer Area	Object	Technology
<input type="checkbox"/> Azure Event Hub	<input type="checkbox"/>	Event Source	<input type="text" value="Technology"/>
<input type="checkbox"/> Azure Event Grid	<input type="checkbox"/>	Event Receiver	<input type="text" value="Technology"/>
<input type="checkbox"/> Azure Service Bus	<input type="checkbox"/>	Event Handler	<input type="text" value="Technology"/>
<input type="checkbox"/> Azure Blob Storage	<input type="checkbox"/>		
<input type="checkbox"/> Azure App Service	<input type="checkbox"/>		
<input type="checkbox"/> Azure Logic App	<input type="checkbox"/>		

Answer:

Explanation:

Explanation:

Box 1: Azure Event Grid

Blob storage events are pushed using Azure Event Grid to subscribers such as Azure Functions, Azure Logic Apps, or even to your own http listener. Event Grid provides reliable event delivery to your applications through rich retry policies and dead-lettering.

Box 2: Azure Logic App

Event Grid uses event subscriptions to route event messages to subscribers. This image illustrates the relationship between event publishers, event subscriptions, and event handlers.

Box 3: Azure Service Bus

The Event Grid service doesn't store events. Instead, events are stored in the Event Handlers, including ServiceBus, EventHubs, Storage Queue, WebHook endpoint, or many other supported Azure Services.

Reference:

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-event-overview>

<https://docs.microsoft.com/en-us/java/api/overview/azure/messaging-eventgrid-readme>

NEW QUESTION # 142

You are creating a CLI script that creates an Azure web app related services in Azure App Service. The web app uses the following

variables:

Variable name	Value
\$gitrepo	https://github.com/Contos/webapp
&webappname	Webapp1103

You need to automatically deploy code from GitHub to the newly created web app.

How should you complete the script? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
az group create --location westeurope --name myResourceGroup
```

```
az webapp create --name $webappname --resource-group myResourceGroup --sku FREE
```

- az webapp create
- az appservice plan create
- az webapp deployment
- az group delete

```
az webapp create --name $webappname --resource-group myResourceGroup
```

- az webapp create
- az appservice plan create
- az webapp deployment
- az group delete

```
git clone $gitrepo --branch master --manual-integration  
git clone $gitrepo  
--plan $webappname
```

```
source config --name $webappname
```

- az webapp create
- az appservice plan create
- az webapp deployment
- az group delete

```
--resource-group myResourceGroup
```

```
--repo-url $gitrepo --branch master --manual-integration  
git clone $gitrepo  
--plan $webappname
```

Answer:

Explanation:

```
az group create --location westeurope --name myResourceGroup
```

```
az webapp create --name $webappname --resource-group myResourceGroup --sku FREE
```

- az webapp create
- az appservice plan create
- az webapp deployment
- az group delete

```
az webapp create --name $webappname --resource-group myResourceGroup
```

- az webapp create
- az appservice plan create
- az webapp deployment
- az group delete

```
--repo-url $gitrepo --branch master --manual-integration  
git clone $gitrepo  
--plan $webappname
```

```
source config --name $webappname
```

- az webapp create
- az appservice plan create
- az webapp deployment
- az group delete

```
--resource-group myResourceGroup
```

```
--repo-url $gitrepo --branch master --manual-integration  
git clone $gitrepo  
--plan $webappname
```
