

New AZ-700 Test Book, AZ-700 Test Brainsdumps

DOWNLOAD the newest PremiumVCEDump AZ-700 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1nxSVIbNSE_Y_KTy8g23FL87zJOtxrwTM

We provide the free demos before the clients decide to buy our AZ-700 study materials. The clients can visit our company's website to have a look at the demos freely. Through looking at the demos the clients can understand part of the contents of our AZ-700 study materials, the form of the questions and answers and our software, then confirm the value of our AZ-700 Study Materials. If the clients are satisfied with our AZ-700 study materials they can purchase them immediately. They can avoid spending unnecessary money and choose the most useful and efficient AZ-700 study materials.

To prepare for the Microsoft AZ-700 Exam, you will need to have a strong understanding of Microsoft Azure Networking Solutions. You should have experience in designing and implementing networking solutions in Microsoft Azure, as well as a strong understanding of network security, monitoring, and optimization. You should also be familiar with virtual network peering, ExpressRoute, and Azure VPN Gateway.

Microsoft AZ-700 Test Brainsdumps | Test AZ-700 Practice

Our AZ-700 exam cram has been revised for lots of times to ensure all candidates can easily understand all knowledge parts. In the meantime, the learning process is recorded clearly in the system, which helps you adjust your learning plan. On the one hand, our company has benefited a lot from renovation. Customers are more likely to choose our products. On the other hand, the money we have invested is meaningful, which helps to renovate new learning style of the AZ-700 Exam. So, why not buy our AZ-700 test guide?

Microsoft AZ-700 Exam is an important certification exam for IT professionals who specialize in Azure networking solutions. It is a challenging exam that requires candidates to have hands-on experience with Azure technologies and a good understanding of networking concepts. Designing and Implementing Microsoft Azure Networking Solutions certification is a valuable asset for IT professionals who want to advance their career in Azure networking solutions.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q105-Q110):

NEW QUESTION # 105

You have an Azure Front Door instance named FD1 that is protected by using Azure Web Application Firewall (WAF). FD1 uses a frontend host named app1.contoso.com to provide access to Azure web apps hosted in the East US Azure region and the West US Azure region.

You need to configure FD1 to block requests to app1.contoso.com from all countries other than the United States.

What should you include in the WAF policy?

- A. a frontend host association
- B. a custom rule that uses a rate limit rule
- C. a custom rule that uses a match rule
- D. a managed rule set

Answer: C

NEW QUESTION # 106

Hotspot Question

You have an Azure subscription that contains an Azure Firewall policy named FWPolicy1.

You need to configure FWPolicy1 to meet the following requirements:

- Allow traffic based on the FQDN of the destination.
- Allow TCP traffic based on the source.

Which types of rules should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Allow traffic based on the FQDN of the destination:

Application only
Network only
Network or DNAT only
Application or DNAT only
Network or application only
Network, application, or DNAT

Allow TCP traffic based on the source:

Application only
Network only
Network or DNAT only
Application or DNAT only
Network or application only
Network, application, or DNAT

Answer:

Explanation:

Answer Area

Allow traffic based on the FQDN of the destination:

Application only
Network only
Network or DNAT only
Application or DNAT only
Network or application only
Network, application, or DNAT

Allow TCP traffic based on the source:

Application only
Network only
Network or DNAT only
Application or DNAT only
Network or application only
Network, application, or DNAT

NEW QUESTION # 107

You have an Azure subscription that contains a virtual network named VNet1. VNet1 contains the resources shown in the following table.

Name	Type	Description
AG1	Azure Application Gateway	Will automatically scale up to three instances
VMSS1	Virtual machine scale set	Consists of four virtual machines that run an app named App1

You need to publish App1 by using AG1 and a URL of https://app1.contoso.com. The solution must meet the following requirements:

- * TLS connections must terminate on AG1.
- * Minimize the number of targets in the backend pool of AG1.
- * Minimize the number of deployed copies of the SSL certificate of App1.

How many locations should you import to the certificate, and how many targets should you add to the backend pool of AG1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Certificates: 1 2 3 4 5

Backend pool targets: 1 2 3 4

Answer:

Explanation:

Answer Area

Certificates: 1 0

- 1
- 2
- 3
- 4
- 5

Backend pool targets: 1

- 1
- 2
- 3
- 4

NEW QUESTION # 108

You have an on-premises network that includes the sites shown in the following table.

Site	Site Address	Firewall private IP	Firewall public IP address
Paris	172.16.0.0/24	172.16.0.1	131.107.50.60
Amsterdam	172.16.1.0/24	172.16.1.1	131.107.70.80
Berlin	172.16.2.0/24	172.16.2.1	131.107.90.100

Each site is connected to the Internet by a firewall. All sites are connected to an SD-WAN. Each site is configured to propagate routes by using BGP.

You have an Azure subscription that includes a virtual network named Vnet1 that contains a Virtual Network Gateway named Gateway 1.

You create a local network gateway with the configuration shown in the gateway exhibit (Click the Gateway tab.)

Home > Local network gateways >

Create local network gateway

Validation passed

Basics Advanced Review + create

Summary

Name	LocalNetworkGateway1
Subscription	Subscription1
Resource group	RG1
Region	East US
Endpoint	IP address
IP address	131.107.50.60
Address Space(s)	172.16.0.0/16

You create a Site-to-Site (S2S) connection with the configuration shown in connection exhibit. (Click the Connection tab)

Create local network gateway ...

Validation passed

Basics Advanced **Review + create**

Summary

Name	LocalNetworkGateway1
Subscription	Subscription1
Resource group	RG1
Region	East US
Endpoint	
IP address	131.107.50.60
Address Space(s)	172.16.0.0/16

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
Users in the Berlin site can connect to resources in Vnet1 via VPN1.	<input type="radio"/>	<input type="radio"/>
To create a direct Site-to-Site connection to the Berlin site an additional Local Network Gateway is required.	<input type="radio"/>	<input type="radio"/>
To enable users in the Paris site to connect to Vnet1, the IP address of LocalNetworkGateway1 must be changed to 172.16.0.1.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
Users in the Berlin site can connect to resources in Vnet1 via VPN1.	<input checked="" type="radio"/>	<input type="radio"/>
To create a direct Site-to-Site connection to the Berlin site an additional Local Network Gateway is required.	<input type="radio"/>	<input checked="" type="radio"/>
To enable users in the Paris site to connect to Vnet1, the IP address of LocalNetworkGateway1 must be changed to 172.16.0.1.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Answer Area

Statements

Microsoft

Users in the Berlin site can connect to resources in Vnet1 via VPN. Yes No

To create a direct Site-to-Site connection to the Berlin site an additional Local Network Gateway is required. Yes No

To enable users in the Paris site to connect to Vnet1, the IP address of LocalNetworkGateway1 must be changed to 172.16.0.1. Yes No

NEW QUESTION # 109

Case Study 2 - Contoso, Ltd

Overview

Contoso, Ltd. is a consulting company that has a main office in San Francisco and a branch office in Dallas.

Contoso recently purchased an Azure subscription and is performing its first pilot project in Azure.

Existing Environment:

Azure Network Infrastructure

Contoso has an Azure Active Directory (Azure AD) tenant named contoso.com. The Azure subscription contains the virtual networks shown in the following table.

Name	Resource group	IP address space	Location	Peered with
Vnet1	RG1	10.1.0.0/16	West US	Vnet2, Vnet3
Vnet2	RG1	172.16.0.0/16	Central US	Vnet1, Vnet3, Vnet4
Vnet3	RG2	192.168.0.0/16	Central US	Vnet1, Vnet2
Vnet4	RG2	10.10.0.0/16	West US	Vnet2
Vnet5	RG3	10.20.0.0/16	East US	None

Vnet1 contains a virtual network gateway named GW1.

Azure Virtual Machines

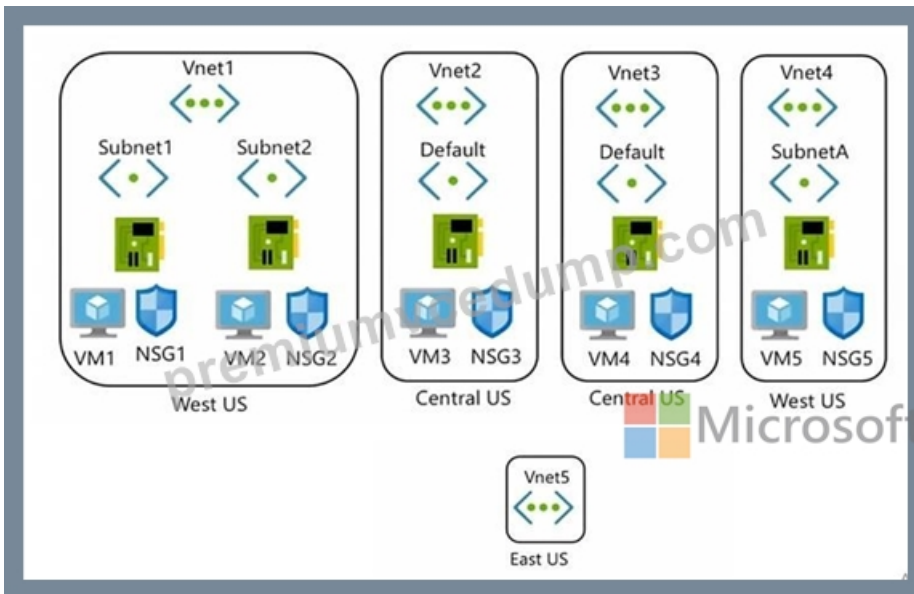

The Azure subscription contains virtual machines that run Windows Server 2019 as shown in the following table.

Name	Location	Connected to	Network security group (NSG)
VM1	West US	Vnet1/Subnet1	NSG1
VM2	West US	Vnet1/Subnet2	NSG2
VM3	Central US	Vnet2/Default	NSG3
VM4	Central US	Vnet3/Default	NSG4
VM5	West US	Vnet4/SubnetA	NSG5

The NSGs are associated to the network interfaces on the virtual machines. Each NSG has one custom security rule that allows RDP connections from the internet. The firewall on each virtual machine allows ICMP traffic.

An application security group named ASG1 is associated to the network interface of VM1.

Azure Network Infrastructure Diagram

Azure Private DNS Zones

The Azure subscription contains the Azure private DNS zones shown in the following table.

Name	Location
zone1.contoso.com	Central US
zone2.contoso.com	West US

Zone1.contoso.com has the virtual network links shown in the following table.

Name	Virtual Network	Auto registration
Link1	Vnet2	No
Link2	Vnet3	Yes

Other Azure Resources

The Azure subscription contains additional resources as shown in the following table.

Name	Type	Location
DB1	Azure SQL Database	West US
storage1	Azure Storage account	West US
Registry1	Azure Container Registry	Central US
KeyVault1	Azure Key Vault	Central US

Requirements:

Virtual Network Requirements

Contoso has the following virtual networks requirements:

- Create a virtual network named Vnet6 in West US that will contain the following resources and configurations:

Two container groups that connect to Vnet6

Three virtual machines that connect to Vnet6

Allow VPN connections to be established to Vnet6

Allow the resources in Vnet6 to access KeyVault1, DB1, and Vnet1 over the Microsoft backbone network

- The virtual machines in Vnet4 and Vnet5 must be able to communicate over the Microsoft backbone network.

- A virtual machine named VM-Analyze will be deployed to Subnet1. VM-Analyze must inspect the outbound network traffic from Subnet2 to the internet.

Network Security Requirements

Contoso has the following network security requirements:

- Configure Azure Active Directory (Azure AD) authentication for Point- to-Site (P2S) VPN users.

- Enable NSG flow logs for NSG3 and NSG4.

- Create an NSG named NSG10 that will be associated to Vnet1/Subnet1 and will have the custom inbound security rules shown in the following table.

Priority	Port	Protocol	Source	Destination	Action
500	3389	TCP	10.1.0.0/16	Any	Deny
1000	Any	ICMP	10.10.0.0/16	VirtualNetwork	Deny

- Create an NSG named NSG11 that will be associated to Vnet1/Subnet2 and will have the custom outbound security rules shown in the following table.

Priority	Port	Protocol	Source	Destination	Action
200	3389	TCP	10.1.0.0/16	VirtualNetwork	Deny

Hotspot Question

You are implementing the Virtual network requirements for Vnet6.

What is the minimum number of subnets and service endpoints you should create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area Microsoft

Subnets:

Service endpoints:
