C-BCSBS-2502試験の準備方法 | 高品質なC-BCSBS-2502模擬解説集試験 | 信頼的なSAP Certified Associate - Positioning SAP Business Suite復習解答例

私たちの会社It-Passportsは、10年以上にわたり、C-BCSBS-2502テスト準備の開発と改善に重点を置いてきました。そのため、C-BCSBS-2502試験の同様のコンテンツ資料のステレオタイプを勇敢に打ち破りつつ、C-BCSBS-2502試験ガイドに試験の真の内容を追加しています。ですから、私たちは、おざなりな態度よりも助けを提供するという強い態度を持っています。最短時間でC-BCSBS-2502試験に合格するのに役立ちます。

SAP Certified Associate - Positioning SAP Business Suite 認定 C-BCSBS-2502 試験問題 (Q23-Q28):

質問 #23

Which SAP solutions provide real-time business intelligence and reporting? There are 2 correct answers to this question.

- A. SAP Transportation Management
- B. SAP Fieldglass
- C. SAP BusinessObjects
- D. SAP Predictive Analytics

正解: C、D

質問 #24

An organization wants to streamline HR processes, ensure compliance with global regulations, and improve workforce planning. Which SAP solutions should they implement? There are 3 correct answers to this question.

- A. SAP Workforce Analytics
- B. SAP SuccessFactors Compensation
- C. SAP Transportation Management
- D. SAP Fieldglass
- E. SAP SuccessFactors Employee Central

正解: A、B、E

質問 #25

What are some scenarios that SAP Business Data Cloud supports?

Note: There are 3 correct answers to this question.

- A. Training large language models
- B. Advanced data modeling and data warehousing
- C. Machine learning and artificial intelligence
- D. Out-of-the-box reporting
- E. Risk management reporting

正解: B、C、D

解説:

The question asks for scenarios supported by SAP Business Data Cloud, a Software-as-a-Service (SaaS) solution that integrates data management, analytics, and AI capabilities to meet the needs of modern organizations. According to official SAP documentation, SAP Business Data Cloud supports a range of scenarios, including machine learning and artificial intelligence, advanced data modeling and data warehousing, and out-of-the-box reporting. These align with Options C, D, and E, making them the correct answers.

Explanation of Correct Answers:

Option C: Machine learning and artificial intelligence

This is correct because SAP Business Data Cloud explicitly supports machine learning (ML) and artificial intelligence (AI) scenarios, particularly through its integration with SAP Databricks. This component provides data scientists with tools to develop and deploy AI/ML models using harmonized SAP and third-party data.

The Describing SAP Business Data Cloud lesson on learning.sap.com states:

"SAP Business Data Cloud can handle many use-cases including: Support the development of AI and machine learning models. ... SAP Databricks - to provide the data scientist with artificial intelligence (AI) / machine learning (ML) development tools."

learning.sap.com Additionally, the documentation highlights:

"What makes SAP Business Data Cloud so powerful, is that it offers the tools and technologies to meet all data and analytics requirements of a modern and agile organization. It uses the latest technology to support scenarios such as: ... Machine learning and artificial intelligence." learning.sap.com This confirms that SAP Business Data Cloud supports AI/ML scenarios, such as predictive analytics, anomaly detection, and advanced automation, by leveraging SAP Databricks and SAP Business Technology Platform (BTP) for scalable model development and deployment.

Option D: Advanced data modeling and data warehousing

This is correct because SAP Business Data Cloud provides robust capabilities for advanced data modeling and data warehousing, primarily through SAP Datasphere, which serves as the foundational data management layer. The documentation states:

"SAP Business Data Cloud provides data warehousing features including a manual data integration and data modeling approach, AI and machine learning based extensions of data models as well as innovative out-of-the-box reporting capabilities side-by-side." learning.sap.com Furthermore, SAP Datasphere enables the creation of semantic data models and data products, supporting both manual and AI-extended modeling for analytics and warehousing needs:

"At the heart of SAP Business Data Cloud is SAP Datasphere, which provides the foundational structures that define the data model on top of the data products. This includes predelivered SAP Business Data Cloud Intelligent Applications and Data Product scenarios but also scenarios with custom data models that can be manually extended with machine learning or AI." learning.sap.com This establishes advanced data modeling and data warehousing as a core scenario, enabling organizations to build and manage complex data architectures for analytics and reporting.

Option E: Out-of-the-box reporting

This is correct because SAP Business Data Cloud offers innovative out-of-the-box reporting through SAP Business Data Cloud Intelligent Applications, which provide prebuilt dashboards and insights with minimal configuration. The documentation notes: "A key highlight of SAP Business Data Cloud is its out-of-the-box reporting capability, featuring SAP Business Data Cloud Intelligent Applications, which create business insights with a single click, empowering informed decision-making." learning.sap.com These Intelligent Applications automate the creation of artifacts, data provisioning, and dashboards, primarily using SAP Analytics Cloud for visualization:

"SAP Analytics Cloud stories are used to provide the required dashboard in out-of-the-box reporting scenarios with SAP Business Data Cloud Intelligent Applications. With its advanced visualization and planning functions, SAP Analytics Cloud serves the business user as a central tool for exploring the requested business insights or executing planning functions." learning.sap.com This confirms that out-of-the-box reporting is a supported scenario, streamlining analytics for business users.

Explanation of Incorrect Answers:

Option A: Training large language models

This is incorrect because SAP Business Data Cloud documentation does not explicitly list training large language models (LLMs) as a supported scenario. While SAP Business Data Cloud supports AI and ML through SAP Databricks and SAP BTP, the focus is on general ML models (e.g., predictive analytics, classification, forecasting) rather than specifically training LLMs, which require specialized infrastructure and massive datasets typically beyond the scope of SAP Business Data Cloud. The documentation mentions:

"SAP Business Data Cloud can handle many use-cases including: Support the development of AI and machine learning models," learning.sap.com However, there is no reference to LLMs specifically. While SAP Business AI integrates with generative AI (e.g., Joule and partnerships with Cohere), these are focused on embedding AI capabilities into processes, not training LLMs from scratch. Training LLMs is more aligned with hyperscaler platforms or specialized AI frameworks, not a primary scenario for SAP Business Data Cloud. pages.community.sap.com Option B: Risk management reporting

This is incorrect because, although SAP Business Data Cloud supports reporting and analytics that could theoretically include risk management use cases, risk management reporting is not explicitly listed as a distinct scenario in the documentation. The supported scenarios focus on broader categories like out-of-the-box reporting, AI/ML, and data modeling/warehousing. For example, the documentation highlights:

"It uses the latest technology to support scenarios such as: Out-of-the-box reporting, Machine learning and artificial intelligence.

Advanced data modeling and data warehousing, Powerful planning and reporting,

Intelligent data management." learning.sap.com

Risk management reporting could be achieved through custom dashboards or Intelligent Applications, but it is not a predefined scenario. In contrast, SAP Business AI supports risk management in specific contexts (e.g., fraud detection in finance), but this is not a core scenario of SAP Business Data Cloud. sap.com Summary:

SAP Business Data Cloud supports machine learning and artificial intelligence (via SAP Databricks), advanced data modeling and data warehousing (via SAP Datasphere), and out-of-the-box reporting (via SAP Analytics Cloud and Intelligent Applications), corresponding to Options C, D, and E. Option A (training large language models) is not a supported scenario, as the platform focuses on general AI/ML rather than LLM training.

Option B (risk management reporting) is not explicitly listed, as it falls under broader reporting capabilities rather than a distinct scenario. These answers align with SAP's focus on delivering a unified data and analytics platform for modern enterprises.

質問 # 26

What is a key advantage of SAP Business Data Cloud Intelligent Applications?

- A. They remove the requirement for formal data governance and compliance policies.
- B. They primarily focus on raw data collection with minimal integrated analysis capabilities.
- C. They provide pre-configured dashboards with AI-driven insights for faster decision-making.

正解: C

解説:

The question asks for a key advantage of SAP Business Data Cloud Intelligent Applications, which are prebuilt, AI-powered applications within SAP Business Data Cloud designed to deliver actionable insights and automate business processes. According to official SAP documentation and the provided search results, the primary advantage is that these applications provide pre-configured dashboards with AI-driven insights for faster decision-making, enabling business users to access ready-to-use analytics with minimal setup. This makes Option A the correct answer.

Explanation of Correct answer:

Option A: They provide pre-configured dashboards with AI-driven insights for faster decision-making.

This is correct because SAP Business Data Cloud Intelligent Applications are designed to deliver pre-configured, SAP-managed dashboards and analytics that leverage AI to provide actionable insights, significantly reducing the time-to-value for business users. These applications combine data from SAP DataSphere and visualization capabilities from SAP Analytics Cloud, infused with AI-driven features like predictive analytics and simulations, to enable agile and informed decision-making. The Describing the Key Capabilities and Benefits of SAP Business Data Cloud lesson on learning.sap.com states:

"New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre-configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions. The intelligent applications enable agile decision-making, predictive analysis, and simulations, leading to better business outcomes." learning.sap.com Additionally, the Intelligent Applications in Business Data Cloud page on www.sap.com elaborates:

"Surface actionable insights and recommendations for analytics and planning with intelligent applications connected directly to your business data. ... These intelligent applications are adaptive, AI-powered applications that learn from your data, understand business context, and act on your behalf to transform business outcomes." sap.com For example, applications like Working Capital Insights or People Intelligence provide prebuilt dashboards that integrate operational and financial data, offering AI-driven recommendations for areas like cash flow optimization or workforce planning. The installation of these applications automates the creation of underlying data models, replication flows, and SAP Analytics Cloud stories, requiring only a few clicks to deploy, as noted in the Managing and Leveraging SAP Business Data Cloud Intelligent Applications lesson:

"From a business user perspective, the result of an installed Intelligent Application is a ready-to-use dashboard. The Intelligent Application is presented to the business user as an SAP Analytics Cloud story which is connected to one or more underlying SAP DataSphere models. The story and all of these connected models are automatically created during the installation of an Intelligent Application." learning.sap.com This pre-configured, AI-driven approach ensures faster decision-making by eliminating the need for extensive manual configuration, making Option A the key advantage.

Explanation of Incorrect Answers:

Option B: They remove the requirement for formal data governance and compliance policies.

This is incorrect because SAP Business Data Cloud Intelligent Applications do not eliminate the need for formal data governance and compliance policies. In fact, these applications rely on robust governance to ensure data quality, security, and compliance, which are critical for trusted AI and analytics outcomes. The SAP Business Data Cloud overview on www.sap.com emphasizes:

"SAP Business Data Cloud delivers fully managed capabilities for business data fabric, ... ensuring data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." sap.com Furthermore, data products within SAP Business Data Cloud include metadata and governance policies to maintain trust and compliance:

"In SAP BDC, data products are curated, reusable, and business-ready data assets designed to deliver immediate value. They encapsulate not just raw data, but also metadata, business context, and governance policies, making them trusted, actionable tools for analysis, planning, and decision-making." learning.sap.com This indicates that governance and compliance are integral to the platform, not removed, making Option B incorrect.

Option C: They primarily focus on raw data collection with minimal integrated analysis capabilities.

This is incorrect because SAP Business Data Cloud Intelligent Applications are designed to provide advanced analytics and AI-driven insights, not just raw data collection. They integrate data from SAP and non-SAP sources, enrich it with business semantics, and deliver sophisticated analysis through prebuilt dashboards and AI capabilities, as opposed to focusing on raw data. The SAP Business Data Cloud features page on www.sap.com states:

"Deliver transformational insights for advanced analytics and planning with prebuilt applications and data products across all lines of business. ... Make faster, smarter decisions with prebuilt analytical apps across your enterprise for Core Enterprise Analytics, People Analytics, and more." sap.com The SAP Sapphire Innovation Guide 2025 further highlights:

"Intelligent applications within SAP Business Data Cloud deliver transformational insights across the entire SAP Business Suite, integrating analytics, AI, and simulations into transactional workflows." sap.com This focus on integrated analytics and AI-driven insights directly contradicts Option C, which misrepresents the applications as having minimal analysis capabilities.

Summary:

The key advantage of SAP Business Data Cloud Intelligent Applications is that they provide pre-configured dashboards with AI-driven insights for faster decision-making, as stated in Option A. These applications leverage SAP Analytics Cloud and SAP DataSphere to deliver ready-to-use, context-aware analytics, enabling rapid deployment and agile decision-making. Option B is incorrect because governance and compliance remain essential, and Option C is incorrect because the applications prioritize advanced analytics over raw data collection. This aligns with SAP's strategy to streamline data-to-decision processes within SAP Business Suite, as supported by the provided search results and official documentation.

質問 #27

For installed base customers, what can RISE with SAP journeys include? Please choose the correct answer.

- A. Leveraging RISE with SAP methodology to drive complex core principles
- B. Starting fresh with a greenfield ERP implementation on private cloud
- C. Moving directly to public cloud without any intermediate steps
- D. A hybrid two-tier approach

正解: D

質問 #28

.....

SAP事実が語るよりも説得力があることは明らかです。したがって、当社がコンパイルしたC-BCSBS-2502テストトレントを味わうために、このWebサイトで無料デモを用意しました。弊社It-PassportsがまとめたC-BCSBS-2502試験トレントは、試験に備えるための最高のC-BCSBS-2502試験トレントであると私たちが確信している理由を理解するでしょう。無料のデモはいつでも好きなときにダウンロードできます。いつでも試してみてください。C-BCSBS-2502のSAP Certified Associate - Positioning SAP Business Suite試験の資料は決してあなたを失望させません。
