100% Pass 2026 Efficient SY0-701: CompTIA Security+ Certification Exam New Practice Materials

The pass rate is 98.95% for the SY0-701 training materials, and most candidates can pass the exam just one time. We ensure you that you will refund your money if you fail to pass the exam. In addition, we offer you free update for one year, and the update version for the SY0-701 exam dumps will be sent to your email automatically, so that you can know the latest information about the SY0-701 Exam Dumps. We provide you with the online chat service, and in the process of learning, if you have any questions about the SY0-701 exam dumps, you can consult us.

CompTIA Security+ Certification Exam Sample Questions (Q514-Q519):

NEW QUESTION # 514

Which of the following best describes a social engineering attack that uses a targeted electronic messaging campaign aimed at a Chief Executive Officer?

- A. Impersonation
- B. Spear phishing
- **C. Whaling**
- D. Identity fraud

Answer: C

Explanation:

Whaling is a type of social engineering attack specifically targeting high-profile individuals such as CEOs or other executives. It is a form of spear phishing that focuses on these high-value targets with highly personalized and convincing messages.

NEW QUESTION # 515

Which of the following involves an attempt to take advantage of database misconfigurations?

- A. Memory injection
- B. Buffer overflow
- **C. SQL injection**
- D. VM escape

Answer: C

Explanation:

Explanation

SQL injection is a type of attack that exploits a database misconfiguration or a flaw in the application code that interacts with the database. An attacker can inject malicious SQL statements into the user input fields or the URL parameters that are sent to the database server. These statements can then execute unauthorized commands, such as reading, modifying, deleting, or creating data, or even taking over the database server. SQL injection can compromise the confidentiality, integrity, and availability of the data and the system. References: CompTIA Security+ Study Guide: Exam SY0-701, 9th Edition, page 215 1

NEW QUESTION # 516

Which of the following best describe the benefits of a microservices architecture when compared to a monolithic architecture? (Choose two.)

- A. Reduced cost of ownership of the system
- B. Increased compartmentalization of the system
- C. Easier debugging of the system
- D. Improved scalability of the system
- E. Reduced complexity of the system
- F. Stronger authentication of the system

Answer: B,D

NEW QUESTION # 517

A company is adding a clause to its AUP that states employees are not allowed to modify the operating system on mobile devices. Which of the following vulnerabilities is the organization addressing?

- A. Cross-site scripting
- B. Buffer overflow
- C. Side loading
- D. Jailbreaking

Answer: D

Explanation:

Jailbreaking is the process of removing the restrictions imposed by the manufacturer or carrier on a mobile device, such as an iPhone or iPad. Jailbreaking allows users to install unauthorized applications, modify system settings, and access root privileges. However, jailbreaking also exposes the device to potential security risks, such as malware, spyware, unauthorized access, data loss, and voided warranty. Therefore, an organization may prohibit employees from jailbreaking their mobile devices to prevent these vulnerabilities and protect the corporate data and network. NEW QUESTION # 518

Which of the following can be best used to discover a company 's publicly available breach information?

- A. OSINT
- B. CVSS
- C. CVE
- D. SIEM

Answer: A

Explanation:

OSINT (Open Source Intelligence) involves collecting publicly available information, including data breaches, leaked credentials, and other exposed company data found online or on the dark web. OSINT tools can discover if a company's information has been compromised publicly.

SIEM (Security Information and Event Management) monitors internal logs and events but does not collect external breach info.

CVE (Common Vulnerabilities and Exposures) is a database of known software vulnerabilities, not breach data. CVSS (Common Vulnerability Scoring System) rates vulnerabilities ' severity.

OSINT is a key technique in the Threats and Vulnerabilities domain for external threat intelligence gathering
