

Pass Guaranteed 1z0-071 - Oracle Database SQL Newest Dumps Download

2026 Latest TestSimulate 1z0-071 PDF Dumps and 1z0-071 Exam Engine Free Share: https://drive.google.com/open?id=1z41brwH3kSp_IdT2mc5667xQSAXQ3Y

Firstly, our company always feedbacks our candidates with highly-qualified 1z0-071 study guide and technical excellence and continuously developing the most professional 1z0-071 exam materials. Secondly, our 1z0-071 training materials persist in creating a modern service oriented system and strive for providing more preferential activities for your convenience. Last but not least, we have free demos for your reference, as in the following, you can download which 1z0-071 Exam Braindumps demo you like and make a choice.

Oracle 1z1-071 exam covers a broad range of topics, including SQL, data manipulation, data control language, data definition language, and basic database concepts. Candidates are expected to have a good understanding of SQL and be able to perform basic database operations. 1z0-071 Exam also tests the candidate's ability to use SQL to retrieve and manipulate data from Oracle databases.

Oracle 1z0-071 certification is highly valued in the IT industry, and passing the exam can open up many job opportunities for professionals. Oracle Database SQL certification serves as proof of one's SQL skills and knowledge, making them a valuable asset to organizations that rely heavily on databases. Many companies require their employees to hold this certification to ensure that they have the necessary skills to work with complex databases.

1z0-071 Dumps - Oracle Database SQL Exam Questions [2026]

Our 1z0-071 practice test is designed to accelerate your professional knowledge and improve your ability to solve the difficulty of 1z0-071 real questions. Well preparation of certification exam is the first step of passing 1z0-071 Exam Tests and can save you lots time and money. Our latest 1z0-071 dumps torrent contains the valid questions and answers which updated constantly.

Oracle 1z0-071 (Oracle Database SQL) certification exam is an excellent choice for IT professionals who want to improve their skills in SQL programming and database management. Oracle Database SQL certification exam covers a range of topics related to SQL programming and database management and is suitable for both experienced professionals and entry-level candidates. Passing 1z0-071 Exam can help candidates gain credibility and stand out in a competitive job market.

Oracle Database SQL Sample Questions (Q160-Q165):

NEW QUESTION # 160

Which two statements are true regarding a SAVEPOINT?

- A. Rolling back to a SAVEPOINT can undo a TRUNCATE statement.
- B. Only one SAVEPOINT may be issued in a transaction.
- C. Rolling back to a SAVEPOINT can undo a CREATE INDEX statement.
- D. A SAVEPOINT does not issue a COMMIT
- E. Rolling back to a SAVEPOINT can undo a DELETE statement

Answer: D,E

Explanation:

Regarding the use of SAVEPOINT in transactions:

* C. A SAVEPOINT does not issue a COMMIT: A SAVEPOINT in Oracle SQL is used to mark a point within a transaction. It does not commit the transaction; rather, it allows partial rollbacks to the point of the SAVEPOINT without affecting other uncommitted changes outside it.

* E. Rolling back to a SAVEPOINT can undo a DELETE statement: SAVEPOINT allows you to rollback DML changes like INSERT, UPDATE, and DELETE that occur after the SAVEPOINT was established, but before a COMMIT.

Incorrect options:

* A: CREATE INDEX is a DDL statement, and like most DDL statements, it implicitly commits the transaction, making it impossible to rollback using a SAVEPOINT.

* B: Multiple SAVEPOINTS can be defined within a single transaction, each with unique or reused names.

* D: TRUNCATE is a DDL statement that also implicitly commits the transaction; hence it cannot be rolled back to a SAVEPOINT.

NEW QUESTION # 161

Examine the structure of the EMPLOYEES table.

Name	Null?	Type
EMPLOYEE_ID	NOT NULL	NUMBER
FIRST_NAME		VARCHAR2
LAST_NAME	NOT NULL	VARCHAR2
EMAIL	NOT NULL	VARCHAR2
PHONE_NUMBER		VARCHAR2
HIRE_DATE	NOT NULL	DATE
JOB_ID	NOT NULL	VARCHAR2
SALARY		NUMBER
COMMISSION_PCT		NUMBER
MANAGER_ID		NUMBER
DEPARTMENT_ID		NUMBER

You must display the details of employees who have manager with MANAGER_ID 100, who were hired in the past 6 months and who have salaries greater than 10000.

Which query would retrieve the required result?

- A. (SELECT last_name, hire_date, salary FROM employees WHERE salary > 10000 UNION ALL SELECT last_name, hire_date, salary FROM employees WHERE manager_id = (SELECT employee_id FROM employees WHERE employee_id = 100)) UNION SELECT last_name, hire_date, salary FROM employees WHERE hire_date > SYSDATE - 180;
- B. SELECT last_name, hire_date, salary FROM employees WHERE manager_id = (SELECT employee_id FROM employees WHERE employee_id = '100') UNION SELECT last_name, hire_date, salary FROM employees WHERE hire_date > SYSDATE - 180 INTERSECT SELECT last_name, hire_date, salary FROM employees WHERE salary > 10000;
- C. SELECT last_name, hire_date, salary FROM employees WHERE manager_id = (SELECT employee_id FROM employees WHERE employee_id = 100) UNION ALL (SELECT last_name, hire_date, salary FROM employees WHERE hire_date > SYSDATE - 180 INTERSECT SELECT last_name, hire_date, salary FROM employees WHERE salary > 10000);

- D. SELECT last_name, hire_date, salary
FROM employees
WHERE salary > 10000
UNION ALL
SELECT last_name, hire_date, salary
FROM employees
WHERE manager_ID = (SELECT employee_id FROM employees WHERE employee_id = 100) INTERSECT SELECT
last_name, hire_date, salary FROM employees WHERE hire_date > SYSDATE- 180;

Answer: B

NEW QUESTION # 162

Which two statements will return the names of the three employees with the lowest salaries?

- A. SELECT last_name, salary
FROM employees
WHERE ROWNUM <=3
ORDER BY salary
- B. SELECT last_name, salary
FROM employees
FETCH FIRST 3 ROWS ONLY
ORDER BY salary;
- C. SELECT last name, salary
FROM employees
ORDER BY salary
FETCE FIRST 3 RONS ONLY;
- D. SELECT last_name, salary
FBOM employees
WEERE
ORDER BY SELECT
ROINUM <= 3
salary FROM
employees);
- E. SELECT last_name, salary
FROM
(SELECT' FROM employees ORDER BY salary)
WHERE ROWNUM <=3

Answer: B,E

Explanation:

A: This statement is correct. It orders the employees by salary and fetches the first 3 rows.

B: This statement has a typo with "FETCE" and "RONS" which should be "FETCH" and "ROWS". Hence, it will not execute successfully.

C: This statement will not execute successfully due to syntactical errors and incorrect use of the ORDER BY clause.

D: This statement is correct. It uses a subquery to order employees by salary and then limits the results to the first 3 using the ROWNUM pseudo-column.

E: This statement will not execute successfully because ROWNUM is evaluated before the ORDER BY clause, so it would return the first 3 rows based on the table's natural order, not the lowest salaries.

The behavior of ROWNUM and the FETCH FIRST syntax are explained in the Oracle Database SQL Language Reference 12c.

NEW QUESTION # 163

Which task can be performed by using a single Data Manipulation Language (DML) statement?

- A. removing all data only from a single column on which a primary key constraint is defined
- B. adding a column constraint while inserting a row into a table
- C. removing all data from a single column on which a unique constraint is defined
- D. adding a column with a default value while inserting a row into a table

Answer: C

NEW QUESTION # 164

Which three statements are true reading subqueries?

- A. The subquery and main query must retrieve data from the same table.
- B. A subquery can have more than one main query.
- C. A Main query can have many subqueries.
- D. Only one column or expression can be compared between the subquery and main query.
- E. The subquery and main query can retrieve data from different tables.
- F. Multiple columns or expressions can be compared between the subquery and main query.

Answer: C,E,F
