## WGU Financial Management VBC1 Sample Questions (Q16-Q21):

### NEW QUESTION # 16

What are opportunity costs in the context of inventory management?

- A. Costs of not investing capital tied up in inventory elsewhere
- B. Costs incurred from the physical space used to store inventory
- C. Costs related to the insurance of inventory against loss or damage
- D. Costs for the labor involved in managing inventory levels

**Answer: A**

Explanation:

Opportunity cost represents the return a firm forgoes by investing resources in one use instead of the next best alternative. In inventory management, capital tied up in inventory cannot be used for other value-generating activities such as investing in new projects, paying down debt, or returning cash to shareholders. Financial management emphasizes opportunity cost as a key component of inventory carrying costs, along with storage, insurance, and obsolescence. Ignoring opportunity costs can lead to excessive inventory levels and reduced firm value. Option B correctly identifies this fundamental concept.

#### NEW QUESTION # 17

In the statement of cash flows, what is the most commonly used method by financial analysts to calculate cash flows from operations (CFO)?

- A. The balance sheet method
- **B. The indirect method**
- C. The direct method
- D. The asset disposal method

**Answer: B**

Explanation:

The indirect method is the most commonly used approach to calculate cash flows from operations (CFO). Under this method, analysts begin with net income and adjust for non-cash expenses (such as depreciation and amortization) and changes in working capital accounts (current assets and current liabilities). This method highlights the reconciliation between accrual-based net income and actual cash generated by operations. Financial analysts favor the indirect method because it provides insight into how accounting profits translate into cash flows and helps identify earnings quality issues. Although the direct method shows actual cash inflows and outflows from operations, it is less commonly used due to higher data requirements. The indirect method is widely accepted under accounting standards and dominates published financial statements, making it the standard tool in financial statement analysis and valuation work.

#### NEW QUESTION # 18

What is the main responsibility of the Financial Industry Regulatory Authority (FINRA)?

- A. Insuring investor deposits
- B. Regulating the Federal Reserve
- **C. Regulating brokerage firms and exchange markets**
- D. Overseeing the issuance of currency

**Answer: C**

Explanation:

The Financial Industry Regulatory Authority (FINRA) is a self-regulatory organization responsible for overseeing brokerage firms and registered securities representatives in the United States. Its primary mission is to protect investors and ensure market integrity by enforcing rules governing ethical conduct, disclosure, trading practices, and licensing. FINRA operates under the oversight of the Securities and Exchange Commission (SEC), creating a regulatory structure that combines federal authority with industry expertise. Unlike the FDIC, FINRA does not insure deposits, and unlike the Federal Reserve, it does not manage monetary policy or issue currency. Financial management texts emphasize FINRA's role in supervising broker-dealers, administering qualification exams, and resolving disputes through arbitration and mediation. Option A correctly identifies FINRA's core responsibility.

#### NEW QUESTION # 19

To answer this question, refer to the cash flow worksheet and the internal rate of return (IRR) calculations.

The hospital is only interested in accepting projects with an IRR that exceeds 11%. Assuming the hospital has sufficient capital for both projects and is willing to invest for up to 10 years, which project(s) would the hospital accept?

- A. Neither Project A nor Project B
- **B. Both Project A and Project B**
- C. Project B
- D. Project A

**Answer: B**

Explanation:

The internal rate of return (IRR) represents the discount rate at which a project's net present value (NPV) equals zero. Financial management theory states that a project should be accepted if its IRR exceeds the firm's required rate of return (or hurdle rate), assuming conventional cash flows and no capital rationing.

In this scenario, the hospital has a minimum required return of 11% and sufficient capital to undertake all acceptable projects. Based on the provided IRR calculations, both Project A and Project B have IRRs exceeding 11%, making them financially acceptable under the IRR decision rule. Because there is no capital constraint and the investment horizon is sufficient, the hospital should accept both projects.

Financial management texts caution that IRR can sometimes produce misleading rankings when projects differ significantly in scale or timing. However, when evaluating independent projects with acceptable IRRs, the correct decision is to accept all projects that meet or exceed the required return. Option B correctly reflects this principle.

#### NEW QUESTION # 20

Use Whole Pine Inc.'s financial statements for 20X3 below to answer the following question.

What is Whole Pine Inc.'s total asset turnover for 20X3?

□

- A. 1.25
- B. 2.50
- C. 0.50
- D. 2.33

**Answer: A**

Explanation:

Total asset turnover measures how efficiently a firm uses its assets to generate revenue. It is calculated as  $\text{Sales} \div \text{Total Assets}$ . For Whole Pine Inc., sales for 20X3 are \$10,000 and total assets are \$8,000.

Dividing \$10,000 by \$8,000 yields a total asset turnover of 1.25. This means the company generates

\$1.25 in sales for every \$1.00 invested in assets. From a financial management perspective, this ratio is a key indicator of operating efficiency and is commonly compared across firms within the same industry or across time. A higher turnover suggests more efficient use of assets, while a lower turnover may indicate underutilized capacity or inefficient asset deployment. Asset turnover is also a component of the DuPont analysis, linking operational efficiency to return on equity. Option B correctly reflects both the calculation and interpretation consistent with standard financial analysis practice.
