DA0-002최고덤프문제 - DA0-002시험내용

IT업계 취업 준비생이라면 국제적으로도 승인받는 IT인증자격증 정도는 몇개 취득해야 하지 않을까 싶습니다. CompTIA인증 DA0-002시험을 통과하여 인기 자격증을 취득하시면 취업경쟁률이 제고되어 취업이 쉬워집니다. Itcertkr의CompTIA인증 DA0-002덤프는 많은 시험본 분들에 의해 검증된 최신 최고의 덤프공부자료입니다.망설이지 마시고Itcertkr제품으로 한번 가보세요.

최신 CompTIA Data+ DA0-002 무료샘플문제 (Q118-Q123):

질문 # 118

A data analyst needs to provide a weekly sales report for the Chief Financial Officer. Which of the following delivery methods is the most appropriate?

- A. A spreadsheet with raw data
- B. A detailed text document
- C. A high-level email
- D. A granular daily report in a dashboard

정답: C

설명:

This question pertains to the Visualization and Reporting domain, focusing on report delivery methods for a specific audience. The Chief Financial Officer (CFO) needs a weekly sales report, suggesting a concise, executive-level summary.

* A granular daily report in a dashboard (Option A): Daily granularity is too frequent for a weekly report, and a dashboard might be too interactive for a CFO's needs.

* A detailed text document (Option B): A detailed document is too lengthy for a CFO, who typically needs a summary.

* A spreadsheet with raw data (Option C): Raw data requires further analysis, which isn't appropriate for an executive-level report.

* A high-level email (Option D): A high-level email provides a concise summary of weekly sales, tailored for an executive like a CFO, making it the most appropriate delivery method.

The DA0-002 Visualization and Reporting domain emphasizes "translating business requirements to form the appropriate visualization," and a high-level email is best for delivering a weekly summary to a CFO.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 4.0 Visualization and Reporting.

질문 # 119

The sales department wants to include the composition of total sales amounts across all three sales channels in a report. Given the following sample sales table:

Sales channel

Month

Sales (million \$)

Digital

January

135

Store

February

145

Online

March

165

Store

April

200

Store

May

125

Online

June

155

Digital

July

120

Online

August

145

Digital

September

160

Which of the following visualizations is the most appropriate?

- A. Pie chart
- B. Pivot table
- C. Box plot
- D. KPI card

정답: A

설명:

This question pertains to the Visualization and Reporting domain, focusing on selecting the appropriate visualization for a specific requirement. The task is to show the composition of total sales across three channels, which involves showing proportions.

* Pivot table (Option A): A pivot table summarizes data but isn't a visualization; it's more for data exploration.

* Pie chart (Option B): A pie chart shows the proportion of total sales for each channel (Digital, Store, Online), which is ideal for displaying composition.

* KPI card (Option C): A KPI card displays a single metric, not suitable for showing composition across multiple channels.

* Box plot (Option D): A box plot shows data distribution (e.g., quartiles), not proportions.

The DA0-002 Visualization and Reporting domain emphasizes "translating business requirements to form the appropriate visualization," and a pie chart is best for showing the composition of totals.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 4.0 Visualization and Reporting.

질문 # 120

A data analyst creates a report, and some of the fields are empty. Which of the following conditions should the analyst add to a query to provide a list of all the records with empty fields?

- A. WHERE [ColumnName] = NULL
- B. WHERE [ColumnName] IS NULL
- C. WHERE [ColumnName] IS NOT NULL
- D. WHERE [ColumnName] = 'NULL'

정답: B

설명:

This question falls under the Data Analysis domain, focusing on SQL queries to identify data issues. The task is to find records with empty fields, which in SQL means NULL values.

* WHERE [ColumnName] = NULL (Option A): In SQL, NULL cannot be compared using "="; this syntax is incorrect.

* WHERE [ColumnName] IS NULL (Option B): This is the correct SQL syntax to identify NULL values, which represent empty fields.

* WHERE [ColumnName] IS NOT NULL (Option C): This finds non-empty fields, the opposite of the requirement.

* WHERE [ColumnName] = 'NULL' (Option D): This checks for the string "NULL," not a true NULL value, which is incorrect.

The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods using SQL queries," such as identifying NULL values with IS NULL.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

질문 # 121

A data analyst wants to use the following tables to find all the customers who have not placed an order:

Customers table

ID

Name

Address

Products table

ID

Name

Customer_ID

Which of the following SQL statements is the best way to accomplish this task?

- A. SELECT * FROM CUSTOMERS AS C INNER JOIN PRODUCTS AS P ON C.ID = C.ID WHERE COUNT(P.) = 0
- B. SELECT * FROM PRODUCTS AS P LEFT JOIN CUSTOMERS AS C ON P.Customer_ID = C.ID WHERE

P.Customer_ID IS NOT NULL

- C. SELECT * FROM PRODUCTS AS P INNER JOIN CUSTOMERS AS C ON P.Customer_ID = C.ID WHERE (SELECT COUNT(P.) = 0)
- D. SELECT * FROM CUSTOMERS AS C LEFT JOIN PRODUCTS AS P ON C.ID = P.Customer_ID WHERE P.Customer_ID IS NULL

정답: D

설명:

This question pertains to the Data Analysis domain, focusing on SQL queries to analyze data relationships.

The task is to find customers who have not placed an order, meaning customers in the Customers table without a matching Customer_ID in the Products table.

* Option A: SELECT * FROM CUSTOMERS AS C LEFT JOIN PRODUCTS AS P ON C.ID = P.

Customer_ID WHERE P.Customer_ID IS NULL A LEFT JOIN includes all customers, even those without orders (where Products columns are NULL). Filtering with WHERE P.Customer_ID IS NULL selects only customers without a match in Products, correctly identifying those who haven't ordered.

* Option B: SELECT * FROM CUSTOMERS AS C INNER JOIN PRODUCTS AS P ON C.ID = C.

ID WHERE COUNT(P.*) = 0 An INNER JOIN only includes matching records, so it won't return customers without orders. The join condition C.ID = C.ID is also incorrect, and COUNT requires a GROUP BY, making this invalid.

* Option C: SELECT * FROM PRODUCTS AS P INNER JOIN CUSTOMERS AS C ON P.

Customer_ID = C.ID WHERE (SELECT COUNT(P.*) = 0) An INNER JOIN excludes customers without orders, and the subquery syntax is incorrect (COUNT needs a GROUP BY or to be part of a HAVING clause).

* Option D: SELECT * FROM PRODUCTS AS P LEFT JOIN CUSTOMERS AS C ON P.

Customer_ID = C.ID WHERE P.Customer_ID IS NOT NULL This starts with Products and joins Customers, returning only records with orders (opposite of the task), and IS NOT NULL further excludes non-ordering customers.

The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods using SQL queries," and a LEFT JOIN with a NULL check is the standard method for finding non-matching records.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

질문 # 122

A data analyst wants to understand several datasets at the variable level. Which of the following should the analyst consult to find this information?

- A. Data lineage
- B. Data flow diagram
- C. Data versioning
- D. Data dictionary

정답: D

설명:

This question pertains to the Data Concepts and Environments domain, focusing on documentation for understanding datasets. The analyst needs variable-level details (e.g., field definitions), which points to a specific type of documentation.

* Data lineage (Option A): Data lineage tracks data flow and transformations, not variable definitions.

* Data dictionary (Option B): A data dictionary provides detailed information about variables (e.g., name, type, description), which is exactly what the analyst needs.

* Data flow diagram (Option C): A data flow diagram shows data movement, not variable-level details.

* Data versioning (Option D): Data versioning tracks changes to datasets, not variable definitions.

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," and a data dictionary is the primary tool for variable-level information.
