## Training Fire-Inspector-II Kit, Fire-Inspector-II Online Training

There are various individuals who have never shown up for the 67 - Fire Inspector II Exam certification test as of now. They know close to nothing about the 67 - Fire Inspector II Exam exam model and how to attempt the requests. International Code Council Fire-Inspector-II Dumps give an unequivocal thought of the last preliminary of the year model and how a promising rookie ought to attempt the solicitation paper to score well.

## International Code Council 67 - Fire Inspector II Exam Sample Questions (Q41-Q46):

### NEW QUESTION # 41

Exit signs shall have words on the sign in letters \_\_\_ inches in height.

- A. four
- B. six
- C. five
- D. three

**Answer: A**

Explanation:

1.

Exit Sign Letter Height Requirement

According to the International Fire Code (IFC) 2021, Section 1013.5, and the International Building Code (IBC) 2021, Section 1013.5, exit sign letters must be at least 6 inches in height. However, the minimum height requirement for the wording within the sign (e.g., "EXIT") is specifically 4 inches.

The stroke width of these letters must be at least 0.5 inches to ensure visibility.

2. Verification of Other Options

Option A (three inches) - Below the minimum height requirement. Incorrect.

Option C (five inches) - Exceeds the minimum standard but is not the correct minimum required size.

Incorrect.

Option D (six inches) - This applies to the total EXIT sign height, but the actual letter requirement is 4 inches.

Incorrect.

#### **NEW QUESTION # 42**

Pressure tests for organic coating process piping shall be conducted for a minimum of:

- A. 2 hours
- B. 1 hour
- C. 30 minutes
- D. 45 minutes

**Answer: B**

Explanation:

Pressure tests for organic coating process piping are required to ensure system integrity and prevent leaks, which could lead to fire or explosion hazards. The minimum required duration for these pressure tests is 1 hour.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 1504.6.3 (Pressure Testing for Organic Coating Process Piping) IFC 1504.6.3 mandates that all process piping associated with organic coating operations must undergo a pressure test for at least 1 hour. This ensures that the pipes can handle operational pressures without failure.

2. NFPA 33 - Standard for Spray Application Using Flammable or Combustible Materials (2021 Edition) NFPA 33, Section 14.2.6 confirms that process piping must be pressure-tested for no less than 1 hour to verify its safety and reliability.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 30 minutes is insufficient for proper pressure testing.

Option B (Incorrect): 45 minutes is still below the 1-hour minimum requirement.

Option C (Correct): 1 hour is the correct minimum test duration as required by IFC 1504.6.3 and NFPA 33.

Option D (Incorrect): 2 hours is longer than required, but the minimum requirement is 1 hour.

Thus, the correct and verified answer is: C. 1 hour.

#### **NEW QUESTION # 43**

Evidence of a fire inspection report being written and delivered to the person in charge of the property:

- A. must be copied to the building code official.
- B. forms the basis for any legal action.
- C. must be copied to the city manager or mayor's office.
- D. must be retained by the code official for a minimum of three years.

**Answer: B**

Explanation:

Fire Inspection Report as Legal Documentation

A fire inspection report serves as an official record of inspection findings, compliance violations, and corrective actions required. It provides documented evidence that can be used in legal proceedings if enforcement actions are necessary.

2. Legal Basis and ICC Reference

According to the International Fire Code (IFC) and NFPA Standards, a properly documented inspection report ensures that violations are enforceable in court.

The ICC Fire Inspector Study Guide (2021) emphasizes that an inspection report is a critical legal document that supports the fire department or authority having jurisdiction (AHJ) in case of disputes or appeals.

3. Retention of Reports (Why Other Options Are Incorrect)

Option B (must be copied to the building code official) - Not necessarily required unless local jurisdiction mandates coordination between fire and building code officials.

Option C (must be copied to the city manager or mayor's office) - Fire inspection reports are not typically sent to city administration unless they involve significant violations or policy concerns.

Option D (must be retained by the code official for a minimum of three years) - While record retention is required, the period varies by jurisdiction (some require 3 years, others more), making this an incomplete and less universally correct answer.

**NEW QUESTION # 44**

Incineration operations must comply with which of the following requirements?

- A. Fuel-fired incinerators must be preheated for at least 20 minutes before use
- B. Operators must be at least 21 years of age
- **C. Incineration operations must stop if the fire code official determines that the odor is offensive to nearby residents**
- D. Incineration which creates an odor when burning requires a fire permit

**Answer: C**

Explanation:

IFC allows fire code officials to enforce odor control, requiring operations to stop if odors are offensive (D), aligning with public safety. Options A, B, and C are not standard requirements, with age limits (A) not specified, permits (B) not universally required for odors, and preheating time (C) not mandated. This fits the study guide's incineration regulations.

**NEW QUESTION # 45**

Compressed natural gas (CNG) motor vehicle fuel-dispensing equipment may be installed in which of the following locations?

- A. 40 ft. from trolley wires.
- **B. 20 ft. from a railroad track.**
- C. 15 ft. from a public street.
- D. 5 ft. from an undeveloped property line.

**Answer: B**

Explanation:

Compressed Natural Gas (CNG) motor vehicle fuel-dispensing equipment installation requirements are outlined in 2021 International Fire Code (IFC) Section 2208 - Compressed Natural Gas Motor Fuel- Dispensing Facilities.

IFC 2021, Section 2208.3 - Equipment Location and Protection:

Requires that CNG dispensing equipment be installed at least:

10 feet from property lines

20 feet from public streets, highways, sidewalks, or railroads

10 feet from buildings or structures

Why Other Options Are Incorrect?

A: 40 ft. from trolley wires.

The IFC does not specify a 40-ft requirement for trolley wires in relation to CNG fuel-dispensing equipment.

B: 15 ft. from a public street.

Incorrect because IFC 2208.3 states that the minimum required distance from a public street is 20 feet, not 15 feet.

D: 5 ft. from an undeveloped property line.

Incorrect, as the minimum clearance from any property line is 10 feet, not 5 feet.

## NEW QUESTION # 46

.....

Many students did not perform well before they use 67 - Fire Inspector II Exam actual test. They did not like to study, and they disliked the feeling of being watched by the teacher. They even felt a headache when they read a book. There are also some students who studied hard, but their performance was always poor. Basically, these students have problems in their learning methods. Fire-Inspector-II prep torrent provides students with a new set of learning modes which free them from the rigid learning methods.
