## Valid Test Sharing-and-Visibility-Architect Experience | Sharing-and-Visibility-Architect Flexible Learning Mode

If you choose to buy the ITExamDownload's raining plan, we can make ensure you to 100% pass your first time to attend Salesforce Certification Sharing-and-Visibility-Architect Exam. If you fail the exam, we will give a full refund to you.

## Salesforce Certified Sharing and Visibility Architect Sample Questions (Q21-Q26):

### NEW QUESTION # 21

After setting up Customer Community and enable collaboration, the architect realizes that customers are only Chatter posts from other customers in their account.

What should the architect do to allow viewing chatter posts from all customers?

- A. Enable Internal Users Visibility.
- **B. Enable Community User Visibility.**
- C. Set View All for Chatter posts.
- D. Enable Chatter Super User.

**Answer: B**

### NEW QUESTION # 22

Universal Containers would like to control access to records and objects according to the following business requirements: \* Sales users can view all Account records but only edit their own records.

\* Sales managers view all Account records but only edit records of the team

\* Service users can view all Account records that are not marked with a RecordType of Prospect.

Which organization-wide default configuration should a Salesforce architect recommend to fulfill these requirements?

- A. Public Read Write
- **B. Public Read Only**
- C. Public Read/Transfer
- D. Private

**Answer: B**

Explanation:

Explanation

Public Read Only is the best organization-wide default configuration to fulfill the requirements. Public Read Only means that all users can view all records, but only the owners and those above them in the role hierarchy can edit them. This matches the requirements for sales users and sales managers. For service users, a record type-based sharing rule can be created to restrict their access to accounts with a RecordType of Prospect.

Public Read Write, Private, and Public Read/Transfer are not suitable configurations for the requirements.

### NEW QUESTION # 23

Customer complaints for bad interactions with a customer support agent are logged as Cases and assigned to a human resources representative. The agent of the complaint should not see the case, but their manager should.

How is this accomplished?

- A. Criteria based Sharing Rule on Case that shares to the Role Manager and above when a custom field Assigned Agent (subject of the complaint) is not blank.
- **B. Trigger on Case to lookup and share to the manager of an Assigned Agent custom field (the subject of the complaint) using Apex Managed Sharing.**
- C. Case is owned by the subject of the complaint, so their manager in the role hierarchy can access the record. CRED permission are removed on Case so the agent cannot read the case record.

**Answer: B**

Explanation:

This scenario requires highly specific sharing logic where:

\* The case is hidden from the subject of the complaint.

\* The subject's manager has access.

Apex Managed Sharing provides the precision needed to achieve this requirement. The trigger would identify the agent assigned as the subject of the complaint, lookup their manager, and create a manual sharing rule (via the CaseShare object) granting access to the manager.

\* Option A (Correct): Apex Managed Sharing allows for granular sharing logic tailored to specific business requirements.

\* Option B: Criteria-based sharing rules cannot dynamically account for relationships such as "manager of the assigned agent."

\* Option C: Role Hierarchy sharing doesn't meet the requirement to hide cases from the agent while allowing their manager to see them.

\* Case Sharing Architecture

### NEW QUESTION # 24

Universal Containers (UC) is a non-profit organization and has over 20,000,000 members (donors). The company decided to assign those accounts to Donations Reps based on their regions. Donations Reps ended up owning over 50,000 donors each. The donation reps started to see significant degradation of the system performance. What could be the reason for this problem?

- A. The Account (donor) object OWD is Private.

- B. There is an Account ownership data skew problem
- C. Salesforce sharing recalculation kicked off.
- D. The Donations Reps access to the assigned accounts.

**Answer: B**

#### NEW QUESTION # 25

The architect has a requirement to create a criteria-based sharing rule based on the customer Social. up the rule in Contact Sharing, the field is not shown on the list of available field.

What might cause this?

- A. The architect does not have permission to Compliance fields.
- B. fields with validation rules are not available for sharing rules.
- C. The field has been configured for encryption.
- D. The architect's profile does not have field level Security (FLS) for this field.

**Answer: C**

#### NEW QUESTION # 26

.....

As you know that the number of the questions and answers in the real Sharing-and-Visibility-Architect exam is fixed. So accordingly the information should be collected for you. Our Sharing-and-Visibility-Architect study materials have done the right thing for you. However, we will never display all the information in order to make the content appear more. Our Sharing-and-Visibility-Architect learning guide just want to give you the most important information. This is why Sharing-and-Visibility-Architect actual exam allow you to take the exam in the shortest possible time.
