

# C-CPI-2506 Latest Exam Guide & Study C-CPI-2506 Test

What's more, part of that Itcertmaster C-CPI-2506 dumps now are free: <https://drive.google.com/open?id=1O0B1x0n0OmvIKJI35Nn6Bic5VkJHFvI8d>

We offer you free demo for C-CPI-2506 pdf dumps. You can check out the questions quality and usability of our training material before you buy. SAP C-CPI-2506 questions are written to the highest standards of technical accuracy with accurate answers. If you prepare for your exams using Itcertmaster C-CPI-2506 practice torrent, it is easy to succeed for your certification in the first attempt. Besides, we offer the money refund policy, in case of failure, you can ask for full refund.

## SAP C-CPI-2506 Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"><li>• <b>SAP Integration Suite Overview:</b> This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li></ul>                                |
| Topic 2 | <ul style="list-style-type: none"><li>• <b>Implementing Cloud Integration:</b> This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li></ul> |
| Topic 3 | <ul style="list-style-type: none"><li>• <b>Managing APIs:</b> This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li></ul>   |
| Topic 4 | <ul style="list-style-type: none"><li>• <b>SAP Event Mesh:</b> This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li></ul>                                     |

## Study C-CPI-2506 Test | Knowledge C-CPI-2506 Points

With the intense competition in labor market, it has become a trend that a lot of people, including many students, workers and so on, are trying their best to get a C-CPI-2506 certification in a short time. They all long to own the useful certification that they can have an opportunity to change their present state, including get a better job, have a higher salary, and get a higher station in life and so on,

but they also understand that it is not easy for them to get a C-CPI-2506 Certification in a short time. If you are the one of the people who wants to get a certificate, we are willing to help you solve your problem.

## SAP Certified Associate - Integration Developer Sample Questions (Q34-Q39):

### NEW QUESTION # 34

You are creating an API proxy. Which of the following is a valid path prefix?

- A. /sap/opu/odata
- B. /sap/opo/odata
- C. /sap/odu/odata
- D. /soap/opu/odata

**Answer: A**

Explanation:

In SAP systems (e.g., S/4HANA, SAP Gateway), OData services follow a standard URL path: /sap/opu/odata # The valid and official prefix for OData services.

Example: /sap/opu/odata/sap/API\_BUSINESS\_PARTNER

Other options:

/sap/opo/odata and /sap/odu/odata # Typographical variations, not valid.

/soap/opu/odata # Incorrect, since OData is not SOAP-based.

Thus, the valid prefix is /sap/opu/odata.

### NEW QUESTION # 35

Besides in SAP API Management, where can you find policy templates?

- A. In SAP API Business Accelerator Hub ? Explore Business Processes
- B. In SAP API Business Accelerator Hub - Explore Discover Integrations
- C. In SAP API Business Accelerator Hub- Explore Categories ?? APIs
- D. In SAP API Business Accelerator Hub- Explore Products

**Answer: C**

Explanation:

Besides in SAP API Management, you can find policy templates in SAP API Business Accelerator Hub- Explore Categories ?? APIs. Policy templates are reusable sets of policies that can be applied to APIs to define their behavior and security. In SAP API Business Accelerator Hub, you can explore various categories of APIs that are pre-packaged with policy templates. For example, you can find APIs for sales order processing, customer master data management, product catalog management, and so on. Each API category has a set of policy templates that are suitable for its use case. Reference: SAP API Business Accelerator Hub | SAP Help Portal, Explore Categories | SAP Help Portal

### NEW QUESTION # 36

What must you do to find out which entity sets are available in the OData V2.0 interface?

- A. Contact the OData interface manufacturer.
- B. Search in the Global Directory of all available OData interfaces.
- C. Retrieve the service document from the interface.
- D. Retrieve the metadata document from the interface.

**Answer: D**

Explanation:

In SAP Integration Development, particularly when working with OData V2.0 interfaces, the correct way to identify the available entity sets is by retrieving the metadata document from the OData service. The metadata document, accessible via the \$metadata endpoint of the OData service, provides a comprehensive description of the service's data model, including all entity sets, entity types, properties, associations, and navigation properties. This document is formatted in XML (CSDL - Conceptual Schema Definition Language) and is essential for understanding the structure and capabilities of the OData service.

Why Option B is Correct:

\* **Metadata Document Role:** The metadata document is a standard feature of OData V2.0 services, as defined by the OData protocol. It exposes the schema of the service, listing all entity sets and their properties. For example, accessing `https://<service-url>/$metadata` returns an XML document detailing the entity sets, such as Customers, Orders, or other resources exposed by the service.

\* **SAP Reference:** According to SAP documentation, such as the SAP Gateway Developer Guide and OData V2.0 Protocol Specification, the metadata document is the primary source for discovering the structure of an OData service. In SAP Gateway, which is commonly used for OData services in SAP environments, the `$metadata` endpoint is automatically generated when an OData service is created using the Service Builder (transaction SEGW).

\* **Practical Usage:** In SAP Integration Suite or SAP Cloud Integration, developers use the metadata document to configure integration flows (iFlows) that interact with OData services. Tools like SAP Business Application Studio or Eclipse with SAP plugins allow developers to import this metadata to generate client code or configure adapters.

Why Other Options are Incorrect:

\* **A. Retrieve the service document from the interface:** The service document (accessed via the root URL of the OData service, e.g., `https://<service-url>/`) provides a list of entity sets but only includes their names and URLs, not the detailed structure (e.g., properties, types, or relationships). While it's useful for navigating to entity sets, it lacks the comprehensive schema information provided by the metadata document, making it insufficient for fully understanding the entity sets' structure.

\* **C. Search in the Global Directory of all available OData interfaces:** There is no such thing as a

"Global Directory" for OData interfaces in SAP or the broader OData ecosystem. OData services are specific to individual systems or applications, and their discovery is typically done via the service's metadata or service document, not a centralized directory.

\* **D. Contact the OData interface manufacturer:** This option is not practical or standard. OData is a protocol, not a product with a "manufacturer." The metadata document is the standard, self-contained way to explore an OData service, and no external contact is required.

SAP Integration Developer Workflow Example:

\* **Access the OData Service:** In an SAP environment, an Integration Developer identifies the OData service URL (e.g., `https://<host>:<port>/sap/opu/odata/sap/<service_name>`).

\* **Retrieve Metadata:** Append `/ $metadata` to the service URL to download the metadata XML. For example, `https://<host>:<port>/sap/opu/odata/sap/ZCUSTOMER_SRV/$metadata`.

\* **Analyze Entity Sets:** Parse the `<EntitySet>` elements in the metadata XML to identify available entity sets, their properties, and navigation paths.

\* **Use in Integration:** In SAP Cloud Integration, import the metadata into an iFlow's OData adapter to configure operations like querying or updating specific entity sets.

References:

SAP Help Portal: SAP Gateway Developer Guide - "OData Service Metadata" section, which explains the role of the `$metadata` endpoint in exposing entity sets and their schema.

OData V2.0 Specification: Section 2.2.3.7.1, "Metadata Document," which mandates that OData services provide a metadata document describing entity sets and other resources.

SAP Integration Suite Documentation: "OData Adapter" section, which details how metadata is used to configure integration flows for OData services.

SAP Community Blogs: Articles on OData development in SAP Gateway, such as "Building OData Services with SAP Gateway," emphasize using the metadata document for service exploration.

## NEW QUESTION # 37

What are target endpoints of an API? Note: There are 3 correct answers to this question.

- **A. API provider**
- **B. URL of original API**
- C. Resources
- **D. API proxy**
- E. API consumer

**Answer: A,B,D**

Explanation:

The target endpoints of an API are the API provider, the API proxy, and the URL of the original API. The API provider is the system or application that exposes the interface and functionality of the API. The API proxy is the intermediary component that mediates the requests and responses between the API consumer and the API provider. The URL of the original API is the address that identifies the location and resource of the API.
