

Salesforce Analytics-Admn-201 Realistic Valid Test Questions

BTW, DOWNLOAD part of Dumbleader Analytics-Admn-201 dumps from Cloud Storage: https://drive.google.com/open?id=1HBkpA_vcISBEbJFx9SN8hl12i7uO1Dv3

You can learn Analytics-Admn-201 quiz torrent skills and theory at your own pace, and you are not necessary to waste your time on some useless books or materials and you will save more time and energy that you can complete other thing. We also provide every candidate who wants to get certification with free Demo to check our materials. It is time for you to realize the importance of our Analytics-Admn-201 Test Prep, which can help you solve these annoyance and obtain a Analytics-Admn-201 certificate in a more efficient and productive way.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment. |
| Topic 2 | <ul style="list-style-type: none">• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested. |
| Topic 3 | <ul style="list-style-type: none">• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process. |
| Topic 4 | <ul style="list-style-type: none">• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks. |

| | |
|---------|--|
| Topic 5 | <ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed. |
|---------|--|

Analytics-Admn-201 100% Accuracy - Analytics-Admn-201 Exam PDF

The Analytics-Admn-201 study materials from our company are very convenient for all people, including the convenient buying process, the download way and the study process and so on. Upon completion of your payment, you will receive the email from us in several minutes, and then you will have the right to use the Analytics-Admn-201 Study Materials from our company. In addition, there are three different versions for all people to choose. According to your actual situation, you can choose the suitable version from our Analytics-Admn-201 study materials.

Salesforce Certified Tableau Server Administrator Sample Questions (Q46-Q51):

NEW QUESTION # 46

What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics enabled?

- A. Click the Performance link in the toolbar at the top of the view
- B. Type `record_performance=yes&` at the end of the view URL, immediately before the session ID
- C. Delete the session ID in the URL and reload the view
- D. Type `record_performance=yes&` at the end of the view URL, immediately after the session ID

Answer: D

Explanation:

Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view by modifying its URL.

The correct syntax is to append `record_performance=yes&` to the view URL, immediately after the session ID. For example:

* Original

URL: `http://server##/site/my-site/views/workbook/view?:iid=1`

* Modified

URL: `http://server##/site/my-site/views/workbook/view?:iid=1record_performance=yes`

&

After loading the view with this parameter, a performance recording is generated and accessible via the Performance option in the toolbar.

* Option B (Type `record_performance=yes&` at the end of the view URL, immediately after the session ID): Correct. This follows Tableau's documented method for enabling performance recording.

* Option A (Click the Performance link in the toolbar): Incorrect. The Performance link appears only after recording is triggered via the URL; it's not the method to enable it.

* Option C (Type `record_performance=yes&` immediately before the session ID): Incorrect. The parameter must follow the session ID (e.g., `:iid=1`) to function correctly.

* Option D (Delete the session ID in the URL and reload the view): Incorrect. The session ID is required for the view to load properly; removing it breaks the URL.

Reference: Tableau Server Documentation - "Record Performance of a View" (https://help.tableau.com/current/server/en-us/perf_record.htm).

NEW QUESTION # 47

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import
- B. **New users created as a result of importing a group are assigned the site role specified during the import**
- C. You can change the name of a group during import, although this will not change the group's name in Active Directory
- D. Importing a group from Active Directory requires a .csv file that lists user IDs

Answer: B

Explanation:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

* AD Group Import Process:

* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

* Behavior:

* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

* New Users: Added to Tableau with the site role specified during import.

* Config: Requires AD authentication enabled in TSM.

* Option D (New users created are assigned the site role specified during import): Correct.

* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

* New users get Explorer.

* Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).

* Why: Ensures consistent onboarding-new users align with the group's intended access.

* Option A (Existing users' roles change to match import): Incorrect.

* Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.

* Option B (Requires a .csv file): Incorrect.

* Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).

* Option C (Change group name during import): Incorrect.

* Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 48

What is the maximum number of tasks that a single Backgrounder process can execute simultaneously?

- A. Three
- **B. One**
- C. Unlimited (based on server resources)
- D. Two

Answer: B

Explanation:

The Backgrounder process in Tableau Server handles tasks like extract refreshes and subscriptions-let's explore its concurrency:

* Backgrounder Behavior:

* Each instance is single-threaded for task execution-one task at a time per Backgrounder.

* Multiple Backgrounders (e.g., in multi-node setups) increase parallelism, but a single Backgrounder is limited to 1 concurrent task.

* Queue: Additional tasks wait in the queue, prioritized by their priority (1-100).

* Option A (One): Correct.

* Details: A single Backgrounder executes one task (e.g., an extract refresh) until completion before starting the next.

* Config: Add more Backgrounders via TSM (tsm topology set-process -n node1 -pr backgrounder -c 2) for more concurrency.

* Option B (Two): Incorrect.

* Why: Not natively supported-a single Backgrounder doesn't multi-thread tasks.

* Option C (Three): Incorrect.

* Why: Exceeds the single-threaded design.

* Option D (Unlimited): Incorrect.

* Why: Concurrency is fixed at 1 per instance-resources affect queue processing speed, not simultaneous tasks.

Why This Matters: Understanding Backgrounder limits guides scaling-more instances mean more parallel tasks, critical for heavy workloads.

Reference: Tableau Server Documentation - "Backgrounder Process" (<https://help.tableau.com/current/server/en-us/processes.htm#backgrounder>).

NEW QUESTION # 49

What process enables you to access Tableau Services Manager (TSM) over HTTPS?

- A. License Manager
- B. Administration Agent
- C. Coordination Service
- D. **Administration Controller**

Answer: D

Explanation:

TSM is Tableau Server's management layer, accessible via CLI or web UI (port 8850). HTTPS secures this access-let's identify the responsible process:

* TSM Architecture:

- * Administration Controller: Core TSM process, running on the initial node, handling configuration, UI, and CLI commands.
- * HTTPS: Enabled by default on port 8850 with a self-signed certificate (configurable to custom certs).
- * Option B (Administration Controller): Correct.
- * Details: Hosts the TSM web UI (<https://<server>:8850>) and processes CLI requests. It manages the HTTPS listener, serving the interface securely.
- * Why: It's the central hub for TSM operations, including secure access.
- * Option A (License Manager): Incorrect.
- * Why: Validates licenses, not responsible for HTTPS or UI access.
- * Option C (Administration Agent): Incorrect.
- * Why: Runs on additional nodes in multi-node setups to relay commands to the Controller-no direct HTTPS role.
- * Option D (Coordination Service): Incorrect.
- * Why: ZooKeeper manages cluster state, not TSM's web interface or HTTPS.

Why This Matters: Secure TSM access protects server administration-Administration Controller is the linchpin.

Reference: Tableau Server Documentation - 'TSM Overview' (https://help.tableau.com/current/server/en-us/tsm_overview.htm).

NEW QUESTION # 50

You use Tableau Desktop 10.5 and plan to publish a visualization to a Tableau Server that runs version 2020.1. You are assigned the Creator site role, and Publisher permissions for a project. What statement correctly describes what happens when you attempt to publish the visualization?

- A. You will see an error message instructing you that you are unable to publish the workbook to a newer version of Tableau Server
- B. You will see a warning message instructing you that the workbook will be upgraded to a new version
- C. You will successfully publish the visualization without any errors or warnings
- D. **You will see a warning message instructing you that embedded .tde extracts will be upgraded to .hyper**

Answer: D

Explanation:

Tableau Desktop and Tableau Server have versioning considerations when publishing content, particularly regarding compatibility between older Desktop versions (e.g., 10.5) and newer Server versions (e.g., 2020.1).

Let's break this down step-by-step:

- * Version Context: Tableau Desktop 10.5 was released in 2017 and used the .tde (Tableau Data Extract) format for extracts. Tableau Server 2020.1, released in 2020, introduced the .hyper extract format (starting with version 10.5, but fully standardized later). When publishing from an older Desktop version to a newer Server version, Tableau ensures backward compatibility but may upgrade certain components.
- * Publishing Process: With a Creator site role and Publisher permissions, you have the rights to publish workbooks to the specified project. Tableau Server accepts workbooks from older Desktop versions (e.g., 10.5) and upgrades them to the current Server version (2020.1) during publishing. This process is seamless for the workbook

itself, but extracts require special handling.

* Extract Handling: If the workbook contains embedded .tde extracts (stored within the .twb or .twbx file), Tableau Server 2020.1 converts these to .hyper format upon publishing. This conversion is necessary because .hyper replaced .tde as the default extract engine starting in Tableau 10.5 and beyond, offering better performance and scalability. During this process, Tableau Desktop or Server displays a warning to inform the user of the upgrade, as it's a one-way conversion (you can't revert to .tde on the Server).

Now, let's evaluate the options:

* Option A (You will successfully publish without any errors or warnings): Incorrect. While the publishing succeeds, a warning about the .tde to .hyper conversion appears if the workbook contains embedded extracts. Without extracts, no warning occurs, but the question's context implies extracts are likely involved (common in visualizations).

* Option B (Error message: unable to publish to a newer version): Incorrect. Tableau supports publishing from older Desktop versions to newer Server versions. There's no outright error blocking this; compatibility is maintained.

* Option C (Warning: embedded .tde extracts will be upgraded to .hyper): Correct. This is the precise warning displayed when a workbook with .tde extracts is published to a Server version that uses

.hyper. It ensures the user is aware of the format change, which might affect extract refresh schedules or performance expectations.

* Option D (Warning: workbook will be upgraded to a new version): Partially correct but less specific. The workbook is upgraded to 2020.1 compatibility, but the warning focuses on the extract format change (.tde to .hyper), not the workbook version generically. Option C is more accurate.

Why This Matters: The .tde to .hyper shift improves query performance and supports larger datasets, but users need to know about it for planning (e.g., extract refresh schedules might need adjustment). The warning ensures transparency.

Reference: Tableau Server Documentation - "Publish a Workbook" (https://help.tableau.com/current/server/en-us/publish_workbook.htm) and "Hyper Extract FAQ" (https://help.tableau.com/current/server/en-us/hyper_faq.htm).

NEW QUESTION # 51

.....

We are steeley to be the first-rank Analytics-Admn-201 practice materials in this area. On your way to success, we are the strong backups you can depend on. We have confidence that your career will be in the ascendant with the passing certificate of the Analytics-Admn-201 Study Guide as a beginning. With the unbeatable high pass rate as 98% to 100%, no one can do this job better than us to help you pass the Analytics-Admn-201 exam. Just give you a chance to success!
