Citrix Deploy and Manage Citrix ADC 13 with Citrix Gateway Sample Questions (Q108-Q113):

NEW QUESTION # 108

Scenario: While using the GUI, a Citrix Administrator discovers that a Citrix ADC MPX appliance is unresponsive. The administrator needs to force a core dump for analysis and restart the appliance. What can the administrator do to accomplish this?

- A. Turn off the appliance using the power button.
- **B. Use the non-maskable interrupt (NMI) button on the back of the appliance.**
- C. Connect to a USB port to issue a restart command.
- D. Use the reset button on the front of the appliance.

Answer: B

NEW QUESTION # 109

Scenario: A Citrix Administrator manages an environment with multiple websites running through a Citrix ADC MPX 5905. The Citrix ADC meets the environment's needs during every month except December, when web traffic doubles. The administrator needs to handle this increased web traffic with a temporary, cost-effective solution. What should the administrator recommend purchasing to handle this increased traffic?

- **A. Burst pack license**
- B. Universal license
- C. License upgrade from the MPX 5905 to an MPX 5910
- D. Citrix Gateway platform license

Answer: A

NEW QUESTION # 110

A Citrix Administrator needs to validate that users are NOT disabling a Microsoft Windows service after connecting to company resources through the Citrix Gateway. What can the administrator configure in this scenario?

- A. AppFlow policy
- B. SmartControl
- C. SmartAccess
- **D. Post-authentication policy**

Answer: D

NEW QUESTION # 111

Users accessing a published application through a Citrix Gateway virtual server require SSO to a StoreFront server using an external, secure, single URL.

Which type of virtual server can the administrator use to meet this requirement?

- A. Unified Gateway
- **B. Load Balancing**
- C. VPN
- D. Priority Load Balancing

Answer: B

NEW QUESTION # 112

Scenario: A Citrix ADC receives packets that are destined for a service IP address owned by the Citrix ADC. The destination MAC address is NOT owned by the Citrix ADC. Layer 2 Mode is enabled on the Citrix ADC.

What will the Citrix ADC do with the packets in this scenario?

- **A. Bridge the packets.**
- B. Drop the packets.
- C. Route the packets.

- Answer: A**
