

Real VMware 3V0-21.23 Braindumps - Vce 3V0-21.23 Torrent

BTW, DOWNLOAD part of Test4Engine 3V0-21.23 dumps from Cloud Storage: https://drive.google.com/open?id=1N_7w4Stx5EIEp8RFn2wqSSs0BO7wMAuf

You plan to place an order for our VMware 3V0-21.23 test questions answers; you should have a credit card. Mostly we just support credit card. If you just have debit card, you should apply a credit card or you can ask other friend to help you pay for 3V0-21.23 Test Questions Answers.

There are more opportunities for possessing with a certification, and our 3V0-21.23 study tool is the greatest resource to get a leg up on your competition, and stage yourself for promotion. When it comes to our time-tested 3V0-21.23 latest practice dumps, for one thing, we have a professional team contains a lot of experts who have devoted themselves to the research and development of our 3V0-21.23 Exam Guide, thus we feel confident enough under the intensely competitive market. For another thing, conforming to the real exam our 3V0-21.23 study tool has the ability to catch the core knowledge. So our customers can pass the exam with ease.

Vce VMware 3V0-21.23 Torrent, Exam 3V0-21.23 Duration

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, so about how to get the test VMware certification didn't own a set of methods, and cost a lot of time to do something that has no value. With our 3V0-21.23 exam Practice, you will feel much relax for the advantages of high-efficiency and accurate positioning on the content and formats according to the candidates' interests and hobbies. Numerous grateful feedbacks from our loyal customers proved that we are the most popular vendor in this field to offer our 3V0-21.23 Preparation questions.

VMware vSphere 8.x Advanced Design Sample Questions (Q33-Q38):

NEW QUESTION # 33

An architect is designing a new backup solution for a vSphere platform that has been recently upgraded to vSphere 7. The architect wants the backup solution to perform the following:

- Full virtual machine image backup and restore
- Incremental virtual machine image backup and restore
- File level backup and restore within both Windows and Linux virtual machines
- LAN-free backup.

Which functional requirement should the architect include in the design of the new backup solution?

- A. The backup solution must leverage the VMware Consolidated Backup (VCB) framework.
- B. The backup solution must leverage virtual machine snapshots.

- C. The backup solution must leverage VMware vSphere Storage APIs - Data Protection.
- D. The backup solution must leverage VMware vStorage APIs for Data Protection (VADP).

Answer: C

NEW QUESTION # 34

An architect is designing a series of new vSphere environments for an organization. The environments will be deployed in their US-East and US-West region data centers. Each data center may have one or more dedicated vSphere environments. Only the vSphere environments within a data center will be configured with Enhanced Linked Mode.

The Chief Technology Officer (CTO) has authorized the use of VMware vRealize Automation Cloud for automation. The build team creates standardized virtual machine images for various operating systems in Open Virtualization Format (OVF) and publishes the latest version on an as-needed basis to an internal HTTPS-accessible repository.

The architect must design a content library topology that meets the following requirements:

- A localized content library must be available in each data center.
- Each content library must be updated when an image is updated and released by the build team.
- The cloud automation platform must be able to consume the latest approved content library images.
- It must leverage the existing build team processes.

What should the architect recommend to meet the requirements?

- A. Create a local content library for the primary vSphere environment in each data center. Create a subscribed content library for each additional vSphere environment in each data center. Configure the content library to download content automatically.
- B. Work with the build team to automate a JSON-based manifest to the repository when changes occur in the repository. Create a subscribed content library for each vSphere environment. Configure the content library to download content when needed.
- C. Work with the build team to automate a JSON-based manifest to the repository when changes occur in the repository. Create a subscribed content library for each vSphere environment. Configure the content library to download content automatically.
- D. Work with the build team to create a local content library for each vSphere environment. Import the OVF images when new image are published to the repository.

Answer: C

NEW QUESTION # 35

An architect is designing a new vSphere solution. The following information has been gathered during the design workshops with the customer:

The solution will be deployed into two availability zones (AZs)

The solution will be configured as a single stretched cluster with shared storage across the two AZs Production and Development workloads will run across both AZs The cluster is configured as N + 1 The architect needs to ensure that, in the event of a host failure during maintenance of another host in the cluster, only the Production workloads are recovered.

What should the architect include in the design to meet this requirement?

- A. Configure vSphere HA VM Monitoring to VM and Application Monitoring Set the VM monitoring sensitivity to Custom
- B. Configure vSphere HA VM Monitoring to VM Monitoring only Set the VM monitoring sensitivity to Preset of High
- C. Configure vSphere HA Host Failure Response to Restart VMs Set the cluster default Restart VM Restart Priority to Highest
- D. Configure vSphere HA Host Failure Response to Restart VMs Set the Development VMs to Disabled as the Restart Priority

Answer: D

Explanation:

In this scenario, the requirement is to ensure that only Production workloads are recovered in the event of a host failure during maintenance, while Development workloads are not restarted. This can be achieved using vSphere HA settings.

By configuring the vSphere HA Host Failure Response to Restart VMs, the system will attempt to restart VMs when a host failure occurs.

Setting the Restart Priority for Development VMs to Disabled ensures that these VMs will not be restarted during a failure event, even though the cluster is set to restart VMs in the event of a host failure. This way, only the Production workloads will be restarted, meeting the customer's requirement.

NEW QUESTION # 36

An architect is designing a VMware software-defined data center (SDDC) solution based on the following customer requirements:

- The solution must initially support 1,000 virtual machines
- The solution must scale to support the concurrent running of up to 5,000 virtual machines
- The production environment should be delivered across two data centers
- The solution should have a maximum tolerable downtime (MTD) of four hours
- The solution should have a monthly service availability target of 99.8%.

Which two assumptions could the architect make based on the information from the customer to help size the solution? (Choose two.)

- A. The average resource utilization of a virtual machine
- B. The size (CPU/RAM/storage) of the vSphere hosts
- C. The guest operating system for each virtual machine
- D. The number of vSphere hosts in a cluster
- E. The size (CPU/RAM/storage) of the average virtual machine

Answer: A,E

NEW QUESTION # 37

A architect is designing a new VMware software-designed data center (SDDC) using vSphere 7 to meet the following requirements:

- The SDDC must be deployed at two locations: primary and secondary.
- vSphere Replication must be used to replicate virtual machines between the two locations.
- Site Recovery Manager must be used to orchestrate disaster recovery (DR) activities.
- One single-sign on (SSO) domain must be used to authenticate access at both locations.

Which design decision should the architect make to meet these requirements?

- A. A vCenter Server Appliance will be deployed to each site.
- B. A vCenter Server Appliance will be deployed to the primary site only.
- C. A vCenter Server will be installed on Windows virtual machines deployed to both sites.
- D. A vCenter Server Appliance will be deployed to each site. Unique SSO domains will be created per site.

Answer: A

NEW QUESTION # 38

.....

The latest technologies have been applied to our 3V0-21.23 actual exam as well since we are at the most leading position in this field. You can get a complete new and pleasant study experience with our 3V0-21.23 study materials. Besides, you have varied choices for there are three versions of our 3V0-21.23 practice materials. At the same time, you are bound to pass the exam and get your desired certification for the validity and accuracy of our 3V0-21.23 training guide.

Vce 3V0-21.23 Torrent: https://www.test4engine.com/3V0-21.23_exam-latest-braindumps.html

VMware Real 3V0-21.23 Braindumps If you realize the importance of IT certification, you will make a plan how to prepare for exams, Our 3V0-21.23 exam study material is 100% based on analysis of the previous exam test, VMware Real 3V0-21.23 Braindumps And we are never being proud of our achievements, VMware Real 3V0-21.23 Braindumps People say perfect is a habit.

I'm specifically talking about writing automated tests, Technologies 3V0-21.23 are changing at a very rapid pace, If you realize the importance of IT certification, you will make a plan how to prepare for exams.

VMware vSphere 8.x Advanced Design Interactive Testing Engine & 3V0-21.23 Latest Training Guide & VMware vSphere 8.x Advanced Design Self-Paced Training

Our 3V0-21.23 Exam study material is 100% based on analysis of the previous exam test, And we are never being proud of our

However, you obviously can access the VMware 3V0-21.23 practice exam software by Test4Engine on the web.
