  group 2
  !
  crypto isakmp key cisco123 address 200.1.1.3

Answer: B

Explanation:
Explanation
In the "crypto isakmp key ... address " command, the address must be of the IP address of the other end (which is 200.1.1.3 in this case) so Option A and Option B are correct. The difference between these two options are in the hash SHA or MD5 method but both of them can be used although SHA is better than MD5 so we choose Option A the best answer.
Note: Cisco no longer recommends using 3DES, MD5 and DH groups 1, 2 and 5.

- D. R1(config)# ip route 0.0.0.0.0.0.0.0.2.2.2.2 10 track 1

Define the backup route to use when the tracked object is unavailable. !--- The administrative distance of the backup route must be greater than !--- the administrative distance of the tracked route.!--- If the primary gateway is unreachable, that route is removed!--- and the backup route is installed in the routing table!--- instead of the tracked route.
