Scaled Agile SAFe Release Train Engineer Sample Questions (Q148-Q153):

NEW QUESTION # 148

When should Agile Teams make time for innovation?

- A. When there are Enabler Stories in the Backlog
- B. At a consistent time each day during the Iteration
- C. Continuously throughout the Program Increment

Answer: C

Explanation:

According to the SAFe framework, Agile Teams should allocate time for innovation continuously throughout the Program Increment. This is facilitated through the Innovation and Planning (IP) Iteration, which is a dedicated iteration that occurs every Program

Increment (PI). It provides an estimating buffer for meeting PI Objectives and dedicated time for innovation, continuing education, PI Planning, and Inspect and Adapt (I&A) events¹.

The IP Iteration serves as a regular, cadence-based opportunity for teams to engage in innovation and learning activities that are difficult to fit into a continuous, incremental value delivery pattern. This iteration allows for activities such as hackathons, where individuals can work on innovative ideas outside the usual constraints of their regular backlog and team construct. The outcomes from these hackathons often make their way into the ART Backlogs, driving innovations that benefit the business¹.

Furthermore, dedicating time to PI events during the IP Iteration ensures that the velocity of regular iterations is not reduced. This approach also enhances the predictability of PI performance and provides a buffer for meeting PI objectives¹.

NEW QUESTION # 149

Which of the Core Competencies of Business Agility includes aligning strategy with execution?

- A. Organizational Agility
- B. Lean-Agile Leadership
- C. Agile Product Delivery
- **D. Lean Portfolio Management**

Answer: D

Explanation:

The Core Competency of Business Agility that includes aligning strategy with execution is Lean Portfolio Management. This is verified by the information provided on the SAFe website, which states that Lean Portfolio Management aligns strategy and execution by applying Lean and systems thinking approaches to strategy and investment funding, Agile portfolio operations, and governance¹. This competency enables organizations to align their strategy to execution, ensuring that they create and maintain a portfolio of investments that align with the enterprise's strategic objectives and meet the customer's needs. It involves collaboration between the portfolio stakeholders and Agile Release Trains (ARTs) to develop and implement the strategic themes and Lean budgets that guide the portfolio.

NEW QUESTION # 150

What foundational issue most often leads to team dysfunction?

- **A. Absence of trust**
- B. Weak Lean-Agile leadership
- C. Lack of commitment
- D. Fear of conflict

Answer: A

Explanation:

The foundational issue that most often leads to team dysfunction is the absence of trust. In the context of SAFe, trust is a critical component of an effective Agile Release Train (ART). Without trust, teams may not effectively collaborate, which can lead to various dysfunctions such as fear of conflict, lack of commitment, avoidance of accountability, and inattention to results.

* Trust and the SAFe Framework: SAFe emphasizes the importance of trust among team members and between teams and management. Trust is essential for creating an environment where team members feel safe to take risks, communicate openly, and work towards common goals.

* Impact on PI Planning: During Program Increment (PI) planning, trust enables teams to be open about challenges and dependencies, ensuring that issues are addressed and that the plan is realistic and achievable.

* Role of the RTE: The Release Train Engineer (RTE) plays a pivotal role in fostering trust within the ART. By acting as a servant leader and coach, the RTE helps resolve conflicts, facilitates collaboration, and supports teams in delivering value.

* Continuous Improvement: Trust is also vital for the relentless improvement process within SAFe.

Teams that trust each other are more likely to engage in constructive dialogue and problem-solving, leading to continuous growth and improvement.

* Building Trust: Trust is built through actions such as making and meeting commitments, being transparent, and creating a blame-free environment where learning from mistakes is encouraged.

In conclusion, the absence of trust is the most significant issue leading to team dysfunction, and it is addressed throughout the SAFe framework by encouraging transparency, servant leadership, and a culture of continuous learning and improvement.

NEW QUESTION # 151

What does transparency mean in a scrum environment?

- A. Team members must immediately share any and all feedback with each other
- **B. The process is visible to all stakeholders**
- C. The team is constantly improving its process
- D. Development and Operations teams work together

Answer: B

Explanation:

In a scrum environment, transparency is crucial as it allows all stakeholders to have visibility into the project's progress and challenges. This visibility is essential for trust, timely feedback, and alignment of expectations. It ensures that everyone has a clear understanding of the work being done, which is fundamental in Agile practices. Transparency in SAFe is achieved through various means, such as making the Program Board visible during PI Planning, conducting System Demos, and summarizing Team PI Objectives into Program PI Objectives for visibility¹². This approach helps in creating a shared understanding and enables informed decision-making throughout the course of the project.\

NEW QUESTION # 152

At which two stages will the Agile Release Train (ART) act as a one-team culture? (Choose two.)
