## DASCA Senior Data Scientist Sample Questions (Q70-Q75):

### NEW QUESTION # 70

HDFS supports which quotas?

- A. Space quotas
- B. Both A and B
- C. None of the above
- D. Name quotas

**Answer: B**

Explanation:

HDFS (Hadoop Distributed File System) provides quota management to control and monitor resource usage across directories:

Name Quotas (Option A): Limits the number of files and directories that can be created in a given HDFS directory. Helps prevent excessive metadata growth.

Space Quotas (Option B): Limits the total disk space consumed by files within a directory. Helps in capacity planning and avoiding storage overuse.

Since HDFS supports both types, the correct answer is Option C (Both A and B).

#### NEW QUESTION # 71

Semi-structured data does NOT include:

- **A. Schema-full data**
- B. Database system
- C. File systems
- D. Scientific data

**Answer: A**

#### NEW QUESTION # 72

SpamAssassin has been developed to detect:

- **A. Spam emails**
- B. Email with big attachments
- C. None of the above
- D. Email with virus

**Answer: A**

Explanation:

Apache SpamAssassin is one of the most widely used open-source tools for spam email detection.

It applies a rule-based system combined with Bayesian filtering, heuristics, and collaborative filtering methods to classify incoming emails as spam or legitimate.

Option A (Spam emails): Correct, this is the main function.

Option B (Big attachments): Incorrect. Large attachment filtering is not its primary purpose.

Option C (Email with virus): Incorrect. That falls under antivirus or malware detection tools, not SpamAssassin.

Option D: Incorrect since A is valid.

Thus, the correct answer is Option A (Spam emails).

#### NEW QUESTION # 73

Which of the following is the common evolutionary algorithm of neural networks?

- A. Evolution strategy
- B. Genetic algorithm
- C. Genetic programming
- **D. All of the above**

**Answer: D**

Explanation:

Evolutionary algorithms are optimization techniques inspired by natural selection. They are often applied in neural network optimization for evolving architectures, weights, or hyperparameters.

Genetic Algorithm (Option A): Uses selection, crossover, and mutation to evolve neural network parameters.

Genetic Programming (Option B): Evolves computer programs or expressions; can be applied to evolve neural network structures.  
Evolution Strategy (Option C): Focuses on optimization using mutation and adaptation of parameters.  
Since all are used as evolutionary approaches in neural networks, the correct answer is Option D (All of the above).

#### NEW QUESTION # 74

The DevOps movement is an outgrowth of which of the following software development methodologies?

- A. Waterfall
- B. Promise-based algorithms
- C. Test-driven development and model-driven development
- D. Agile

**Answer: D**

Explanation:

The DevOps movement evolved as a natural extension of the Agile methodology.

Agile (Option A): Agile emphasizes iterative development, collaboration, and flexibility. While Agile improved software development speed, it created challenges in integrating development with IT operations.

DevOps emerged to address this by bringing operations into the Agile cycle - enabling continuous integration, delivery, and deployment.

Waterfall (Option B): Incorrect. Waterfall is a rigid, sequential methodology, fundamentally opposite to the DevOps philosophy.

Promise-based algorithms (Option C): Not a methodology - irrelevant here.

Test-driven development and model-driven development (Option D): While these practices support DevOps, they are not the origin of the movement.

Thus, the DevOps movement is an outgrowth of Agile methodology.
