- A. Confirm primary HCM settings
- B. Confirm primary logistics settings
- C. Define the scope
- D. Create two projects
- E. Confirm primary finance settings

Answer: B,C,D

Explanation:

For implementing SAP S/4HANA Cloud Public Edition for a customer, the following systems are commonly used:

* Sandbox system: This system is used in the very early stages of the project for exploration and trying out different configurations without affecting the development or production environments. It's a safe space for experimentation.

* Development system: This system is where the initial setup and customizations are made. Configuration changes, custom development, and extensions are carried out here before being moved to the test system for further testing.

* Test system: After configurations and developments are done in the development system, they are transported to the test system. This environment is used for rigorous testing to ensure that everything works as expected and to identify any issues before moving to the production environment.

These systems play crucial roles in the implementation process, allowing for a structured and phased approach to setting up, customizing, testing, and finally deploying SAP S/4HANA Cloud Public Edition.

NEW QUESTION # 32

.....

If you are curious or doubtful about the proficiency of our C-S4CPB-2508 practice materials, we can explain the painstakingly word we did behind the light. By abstracting most useful content into the C-S4CPB-2508 practice materials, they have help former customers gain success easily and smoothly. The most important part is that all contents were being sifted with diligent attention. No errors or mistakes will be found within our C-S4CPB-2508 practice materials. We stress the primacy of customers' interests, and make all the preoccupation based on your needs.
