

# Free PDF Updated Nutanix - NCP-DB-6.10 - Latest Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Test Pdf

We will provide you with professional advice before you buy our NCP-DB-6.10 guide materials. If you have problems in the process of using our NCP-DB-6.10 study questions, as long as you contact us anytime and anywhere, we will provide you with remote assistance until that all the problems on our NCP-DB-6.10 Exam Braindumps are solved. When you send us a message, we will reply immediately and we will never waste your precious time on studying our NCP-DB-6.10 practice quiz.

We all know that the NCP-DB-6.10 exam is not easy to pass and the certification is not easy to get. But where is a will, there is a way. if you are really determined, go buy NCP-DB-6.10 study materials now. With the help of NCP-DB-6.10 learning guide, your road will go more smoothly. If you want to know more about our products, maybe you can use the trial version of NCP-DB-6.10 simulating exam first. Of course, you can also spend a few minutes looking at the feedbacks to see how popular our NCP-DB-6.10 exam questions are.

## Nutanix NCP-DB-6.10 Valid Test Tips, NCP-DB-6.10 New Study Guide

The software version is one of the three versions of our NCP-DB-6.10 exam prep. The software version has many functions which are different with other versions'. On the one hand, the software version of NCP-DB-6.10 test questions can simulate the real examination for all users. By actually simulating the test environment, you will have the opportunity to learn and correct self-shortcoming in study course. On the other hand, although you can just apply the software version of NCP-DB-6.10 training guide in the windows operation system.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q91-Q96):

### NEW QUESTION # 91

What is the first step to add Time Machine (TM) data access to a Nutanix cluster?

- A. Enable multi-cluster in NDB.
- B. Delete the TM data from the source database.
- C. Disable multi-cluster in ND8.
- D. Register the required Nutanix clusters in ND8.

**Answer: D**

Explanation:

To add Time Machine data access to a Nutanix cluster, the first step is to register the cluster in NDB. This will allow NDB to discover and manage the databases and snapshots on the cluster.

You can register multiple Nutanix clusters in NDB using the Add Cluster option in the NDB settings page. You can also specify the

cluster role, such as source, target, or both, depending on the data access and replication needs. Enabling or disabling multi-cluster in NDB is not the first step, as this is a global setting that affects the entire NDB instance. Deleting the TM data from the source database is not the first step, as this will remove the data protection and availability of the database.

#### NEW QUESTION # 92

Which two encryption methods can be used when configuring an SMTP server? (Choose two.)

- A. SSL
- B. S/MIME
- C. TLS
- D. IPsec

**Answer: A,C**

Explanation:

NDB supports SMTP server configuration for sending email notifications and alerts. SMTP server configuration requires specifying the SMTP server address, port, username, password, and encryption method. The encryption method determines how the email messages are secured during transmission. NDB supports two encryption methods for SMTP server configuration: TLS and SSL. TLS (Transport Layer Security) is a protocol that encrypts and authenticates data between the email client and the SMTP server. TLS can operate in two modes: explicit and implicit. In explicit mode, the email client and the SMTP server negotiate the encryption method and parameters after establishing a plain text connection. This mode typically uses port 587. In implicit mode, the email client and the SMTP server assume that the connection is encrypted from the start, without any negotiation. This mode typically uses port 465.

SSL (Secure Sockets Layer) is a predecessor of TLS that also encrypts and authenticates data between the email client and the SMTP server. SSL operates in implicit mode only, and uses port

465 by default. SSL is less secure than TLS, but it is still widely used and supported by many email providers. S/MIME (Secure/Multipurpose Internet Mail Extensions) is a standard that encrypts and signs email messages at the application layer, rather than the transport layer.

S/MIME requires the use of digital certificates and public key cryptography to ensure the confidentiality and integrity of email messages. S/MIME is not a valid encryption method for SMTP server configuration, as it does not affect the connection between the email client and the SMTP server. IPsec (Internet Protocol Security) is a suite of protocols that secures IP packets at the network layer, rather than the application or transport layer. IPsec can encrypt and authenticate data between any two IP endpoints, such as routers, firewalls, or hosts. IPsec is not a valid encryption method for SMTP server configuration, as it does not apply to the specific protocol or port used by SMTP.

#### NEW QUESTION # 93

Which response shows two ways to upgrade an NDB Server?

- A. One-click Upgrade and In-place Upgrade Auto
- B. One-click Upgrade and Offline Upgrade
- C. Out-of-Place Upgrade and In-place Upgrade
- D. Upgrade and Manual Upgrade

**Answer: B**

Explanation:

There are two ways to upgrade an NDB Server: one-click upgrade and offline upgrade. One-click upgrade is the recommended method, as it automatically downloads and installs the latest NDB software version from the Nutanix portal. Offline upgrade is an alternative method, which requires you to manually download the NDB software bundle and upload it to the NDB Server VM. Both methods require you to have a valid Nutanix account and an internet connection.

#### NEW QUESTION # 94

How does NDB send notifications when alerts are generated?

- A. Email
- B. SNMP
- C. Pulse

- D. APIs

**Answer: A**

Explanation:

NDB sends notifications when alerts are generated via email. The email notifications can be configured to send to one or more recipients, and can be customized to include the alert severity, category, description, and resolution steps. The email notifications help to inform the database administrator and other stakeholders about the status and issues of the NDB-managed databases and operations.

NDB does not send notifications via SNMP, APIs, or Pulse. SNMP is a protocol for collecting and organizing information about managed devices on a network. APIs are interfaces for communicating and exchanging data between different applications or systems. Pulse is a feature of the Nutanix cluster that collects and sends diagnostic and usage data to Nutanix for analysis and support.

**NEW QUESTION # 95**

What is the minimum frequency in minutes configurable for NDB Log Catch-up operation?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: B**

Explanation:

The minimum frequency configurable for the NDB Log Catch-up operation is 15 minutes. This setting determines how frequently the log catch-up process runs, which is crucial for maintaining data integrity and ensuring up-to-date database states.

**NEW QUESTION # 96**

.....

Itexamguide can provide you a pertinence training and high quality exercises, which is your best preparation for your first time to attend Nutanix certification NCP-DB-6.10 exam. Itexamguide's exercises are very similar with the real exam, which can ensure you a successful passing the Nutanix Certification NCP-DB-6.10 Exam. If you fail the exam, we will give you a full refund.
