DP-203 Latest Exam Fee | Related DP-203 Exams

Microsoft certification is one of the best golden-content certifications in IT expert field all over the world, and it is also the necessary condition of choosing talents standard in large enterprises. DP-203 exam questions answers is useful for candidates who are eager to go through the examination. There are thousands of companies recognized and valued the certification in the world. DP-203 Exam Questions Answers will make you pass exam easily.

Microsoft Data Engineering on Microsoft Azure Sample Questions (Q48-Q53):

NEW QUESTION # 48

You are designing an application that will use an Azure Data Lake Storage Gen 2 account to store petabytes of license plate photos from toll booths. The account will use zone-redundant storage (ZRS).

You identify the following usage patterns:

- * The data will be accessed several times a day during the first 30 days after the data is created. The data must meet an availability SU of 99.9%.
- * After 90 days, the data will be accessed infrequently but must be available within 30 seconds.
- * After 365 days, the data will be accessed infrequently but must be available within five minutes.

First 30 days:

Cool

Hot

After 90 days:

Archive

Cool

Hot

After 365 days:

Archive

Cool

Hot

Answer:

Explanation:

First 30 days:

After 90 days:

After 365 days:

Explanation

Box 1: Hot

The data will be accessed several times a day during the first 30 days after the data is created. The data must meet an availability SLA of 99.9%.

Box 2: Cool

After 90 days, the data will be accessed infrequently but must be available within 30 seconds.

Data in the Cool tier should be stored for a minimum of 30 days.

When your data is stored in an online access tier (either Hot or Cool), users can access it immediately. The Hot tier is the best choice for data that is in active use, while the Cool tier is ideal for data that is accessed less frequently, but that still must be available for reading and writing.

Box 3: Cool

After 365 days, the data will be accessed infrequently but must be available within five minutes.

NEW QUESTION # 49

You are designing an Azure Data Lake Storage Gen2 container to store data for the human resources (HR) department and the operations department at your company. You have the following data access requirements:

- * After initial processing, the HR department data will be retained for seven years.
 - * The operations department data will be accessed frequently for the first six months, and then accessed once per month.
- You need to design a data retention solution to meet the access requirements. The solution must minimize storage costs.

Answer:

Explanation:

See the answer in explanation.

Explanation

answer is below

NEW QUESTION # 50

You are developing an Azure Synapse Analytics pipeline that will include a mapping data flow named Dataflow1. Dataflow1 will read customer data from an external source and use a Type 1 slowly changing dimension (SCD) when loading the data into a table named DimCustomer1 in an Azure Synapse Analytics dedicated SQL pool.

You need to ensure that Dataflow1 can perform the following tasks:

- * Detect whether the data of a given customer has changed in the DimCustomer table.
- * Perform an upsert to the DimCustomer table.

Which type of transformation should you use for each task? To answer, select the appropriate options in the answer area NOTE; Each correct selection is worth one point.

Answer:

NEW QUESTION # 51

You are designing an enterprise data warehouse in Azure Synapse Analytics that will store website traffic analytics in a star schema. You plan to have a fact table for website visits. The table will be approximately 5 GB.

You need to recommend which distribution type and index type to use for the table. The solution must provide the fastest query performance.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Hash

Consider using a hash-distributed table when:

The table size on disk is more than 2 GB.

The table has frequent insert, update, and delete operations.

Box 2: Clustered columnstore

Clustered columnstore tables offer both the highest level of data compression and the best overall query performance.

NEW QUESTION # 52

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Data Lake Storage account that contains a staging zone.

You need to design a daily process to ingest incremental data from the staging zone, transform the data by executing an R script and then insert the transformed data into a data warehouse in Azure Synapse Analytics.

Solution: You use an Azure Data Factory schedule trigger to execute a pipeline that executes a mapping data flow, and then inserts the data into the data warehouse.

Does this meet the goal?

- A. Yes
- B. NO

Answer: A

NEW QUESTION # 53

.....

Learning and understanding Microsoft DP-203 Exam Questions is not enough to pass the DP-203 exam. Regular tests and self-evaluation are essential. The online DP-203 practice test engine makes it easy for candidates to self-evaluate anytime. The results will boost your confidence and highlight any areas that need more attention. Educationists and experts highly acknowledge this tool created by TestValid.
