

Pass Guaranteed 2026 JN0-637: Valid Valid Security, Professional (JNCIP-SEC) Exam Voucher

DOWNLOAD the newest Dumpleader JN0-637 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1c2sCTKla_Kcm7_vRQkj7GioTPpLnYddb

You will be feeling be counteracted the effect of tension for our Juniper JN0-637 practice dumps can relieve you of the anxious feelings. Our Security, Professional (JNCIP-SEC) practice materials are their masterpiece full of professional knowledge and sophistication to cope with the Juniper JN0-637 Exam. They have sublime devotion to their career just like you, and make progress ceaselessly.

Juniper JN0-637 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Advanced IPsec VPNs: Focusing on networking professionals, this part covers advanced IPsec VPN concepts and requires candidates to demonstrate their skills in real-world applications.
Topic 2	<ul style="list-style-type: none">Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.
Topic 3	<ul style="list-style-type: none">Logical Systems and Tenant Systems: This topic of the exam explores the concepts and functionalities of logical systems and tenant systems.
Topic 4	<ul style="list-style-type: none">Advanced Policy-Based Routing (APBR): This topic emphasizes on advanced policy-based routing concepts and practical configuration or monitoring tasks.
Topic 5	<ul style="list-style-type: none">Advanced Network Address Translation (NAT): This section evaluates networking professionals' expertise in advanced NAT functionalities and their ability to manage complex NAT scenarios.
Topic 6	<ul style="list-style-type: none">Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.
Topic 7	<ul style="list-style-type: none">Troubleshooting Security Policies and Security Zones: This topic assesses the skills of networking professionals in troubleshooting and monitoring security policies and zones using tools like logging and tracing.

Money Back Guarantee on Juniper JN0-637 Exam Questions If You Don't Succeed

This format enables you to assess your JN0-637 test preparation with a Juniper JN0-637 certification exam. You can also customize your time and the kinds of Juniper JN0-637 Exam Questions of the Juniper JN0-637 practice test. Dumpleader has formulated JN0-637 PDF questions for the convenience of Juniper JN0-637 test takers.

Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q57-Q62):

NEW QUESTION # 57

Exhibit:

Your company uses SRX Series devices to establish an IPsec VPN that connects Site-1 and the HQ networks.

You want VoIP traffic to receive priority over data traffic when it is forwarded across the VPN.

Which three actions should you perform in this scenario? (Choose three.)

- A. Enable the multi-sa parameter to enable two separate IPsec SAs for the VoIP and data traffic.
- B. Enable next-hop tunnel binding.
- C. Configure CoS forwarding classes and scheduling parameters.
- D. Enable the copy-outer-dscp parameter so that DSCP header values are copied to the tunneled packets.
- E. Create a firewall filter that identifies VoIP traffic and associates it with the correct forwarding class.

Answer: A,C,E

Explanation:

Explanation:

NEW QUESTION # 58

Which two statements are true about ADVPN members? (Choose two.)

- A. ADVPN members can use IKEv2.
- B. ADVPN members can use IKEv1.
- C. ADVPN members are authenticated using certificates.
- D. ADVPN members are authenticated using pre-shared keys.

Answer: A,C

NEW QUESTION # 59

A company wants to partition their physical SRX series firewall into multiple logical units and assign each unit (tenant) to a department within the organization. You are the primary administrator of the firewall and a colleague is the administrator for one of the departments. Which two statements are correct about your colleague? (Choose two)

- A. The colleague can modify the number of allocated resources for the tenant system
- B. The colleague can configure the resources allocated and routing protocols
- C. The colleague can access and view the resources of the tenant system
- D. The colleague can create and assign logical interfaces to the tenant system

Answer: C,D

Explanation:

A company wants to partition their physical SRX series firewall into multiple logical units and assign each unit (tenant) to a department within the organization. You are the primary administrator of the firewall and a colleague is the administrator for one of the departments.

The two statements that are correct about your colleague are:

B) The colleague can access and view the resources of the tenant system. A tenant system is a type of logical system that is created and managed by the primary administrator of the firewall. A tenant system has its own discrete administrative domain, logical

interfaces, routing instances, security policies, and other features. The primary administrator can assign a tenant system to a department within the organization and delegate the administration of the tenant system to a colleague. The colleague can access and view the resources of the tenant system, such as the allocated CPU, memory, and bandwidth, and the configured interfaces, zones, and policies1.

C) The colleague can create and assign logical interfaces to the tenant system. A logical interface is a software interface that represents a subset of the physical interface. A logical interface can have its own address, encapsulation, and routing parameters. The primary administrator can allocate a number of logical interfaces to a tenant system and allow the colleague to create and assign logical interfaces to the tenant system. The colleague can configure the logical interfaces with the appropriate address, encapsulation, and routing parameters for the tenant system2.

The other statements are incorrect because:

A) The colleague cannot configure the resources allocated and routing protocols. The resources allocated and routing protocols are configured by the primary administrator of the firewall. The primary administrator can allocate a fixed amount of resources, such as CPU, memory, and bandwidth, to a tenant system and specify the routing protocols that are allowed for the tenant system. The colleague cannot modify the resources allocated or routing protocols for the tenant system1.

D) The colleague cannot modify the number of allocated resources for the tenant system. The number of allocated resources for the tenant system is configured by the primary administrator of the firewall. The primary administrator can allocate a fixed amount of resources, such as CPU, memory, and bandwidth, to a tenant system and monitor the resource usage of the tenant system. The colleague cannot modify the number of allocated resources for the tenant system1.

NEW QUESTION # 60

Exhibit

You are trying to configure an IPsec tunnel between SRX Series devices in the corporate office and branch1. You have committed the configuration shown in the exhibit, but the IPsec tunnel is not establishing.

In this scenario, what would solve this problem.

- A. Change the IKE proposal-set to compatible on the branch1 and corporate devices.
- B. Change the IKE mode to aggressive on the branch1 and corporate devices.
- C. Add multipoint to the st0.0 interface configuration on the branch1 device.
- D. **Change the local identity to inet advpn on the branch1 device.**

Answer: D

NEW QUESTION # 61

Your Source NAT implementation uses an address pool that contains multiple IPv4 addresses. Your users report that when they establish more than one session with an external application, they are prompted to authenticate multiple times. External hosts must not be able to establish sessions with internal network hosts. What will solve this problem?

- A. Enable address persistence.
- B. Disable PAT.
- C. Enable destination NAT.
- D. **Enable persistent NAT**

Answer: D

NEW QUESTION # 62

.....

You can become part of this skilled and qualified community. To do this just enroll in the Dumpleader Juniper JN0-637 certification exam and start preparation with real and valid Security, Professional (JNCIP-SEC) (JN0-637) exam practice test questions right now. The Dumpleader JN0-637 Exam Practice test questions are checked and verified by experienced and qualified JN0-637 exam trainers. So you can trust Dumpleader Juniper JN0-637 exam practice test questions and start preparation with confidence.
