are interested in pursuing a career in Linux administration or who want to demonstrate their proficiency in the Linux operating system

## Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q199-Q204):

### NEW QUESTION # 199

Which of the following commands changes the ownership of file.txt to the user dan and the group staff?

- A. `chown -u dan -g staff file.txt`
- B. `chown dan:staff file.txt`
- C. `chown dan/staff file.txt`
- D. `chown dan -g staff file.txt`

**Answer: B**

### NEW QUESTION # 200

Which of the following directories on a 64-bit Linux system typically contain shared libraries? (Choose two.)

- A. `/usr/lib64/`
- B. `/var/lib64/`
- C. `/opt/lib64/`
- D. `/lib64/`
- E. `~/lib64/`

**Answer: A,D**

Explanation:

The directories on a 64 bit Linux system that typically contain shared libraries are `/usr/lib64/` and `/lib64/`.

Shared libraries are binary files that provide reusable functions, routines, classes, data structures, and so on for programs and applications. They are loaded into memory before the program starts and shared by multiple processes that use the same library.

Shared libraries are usually stored in standard locations in the file system, such as `/usr/lib`, `/usr/local/lib`, `/lib`, and `/lib64` for 32 bit systems, and `/usr/lib64`, `/usr/local/lib64`, `/lib64`, and

`/lib` for 64 bit systems<sup>12</sup>. The `/usr/lib64` and `/lib64` directories contain the shared libraries for the system and user applications, respectively. The other directories are either non-existent or do not contain shared libraries.

The `~/lib64/` directory is not a standard location for shared libraries, and it is unlikely that a user would have such a directory in their home directory. The `/var/lib64/` directory is also not a standard location for shared libraries, and it is usually used for variable data files that are specific to a package or application. The `/opt`

`/lib64/` directory is not a standard location for shared libraries, and it is usually used for optional software packages that are installed in the `/opt` directory<sup>3</sup>. References:

### NEW QUESTION # 201

What is true regarding the command

```
ls > files
```

if files do not exist?

- A. files is created and contains the output of ls
- B. Any output of ls is discarded
- C. The command files is executed and receives the output of ls
- D. The output of ls is printed to the terminal
- E. An error message is shown and ls is not executed

**Answer: A**

Explanation:

Explanation

The command `ls > files` uses the output redirection operator `>` to send the output of the `ls` command to a file named `files`. If the file does not exist, it will be created and will contain the output of the `ls` command, which is the list of files and directories in the current working directory. This is explained in the first web search result 1 and the second web search result 2. References: 1: Input Output & Error Redirection in Linux [Beginner's Guide] 2: Redirections (Bash Reference Manual)

### NEW QUESTION # 202

Which of the following are modes of the vi editor? (Choose two.)

- A. edit mode
- B. review mode
- C. insert mode
- D. command mode
- E. change mode

**Answer: C,D**

Explanation:

Explanation

The modes of the vi editor that are correct are insert mode and command mode. The vi editor is a modal editor, which means that it has different modes for different operations. The insert mode allows the user to insert text into the file. The command mode allows the user to execute commands, such as saving, quitting, moving the cursor, searching, replacing, and so on. The user can switch between the modes by pressing certain keys, such as `Esc`, `i`, `a`, `o`, and others. The edit mode, change mode, and review mode are not valid modes of the vi editor.
