100% Pass Quiz JN0-336 - Security, Specialist (JNCIS-SEC) –Valid Exam Topics Pdf

The Juniper JN0-336 certification exam offers a great opportunity for professionals to demonstrate their expertise and knowledge level. In return, they can become competitive and updated with the latest technologies and trends. To do this they just need to enroll in Juniper JN0-336 Certification Exam and have to put all efforts and resources to pass this challenging JN0-336 exam.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q19-Q24):

NEW QUESTION # 19

You are implementing an SRX Series device at a branch office that has low bandwidth and also uses a cloud-based VoIP solution with an outbound policy that permits all traffic.

Which service would you implement at your edge device to prioritize VoIP traffic in this scenario?

- A. AppQoS
- B. AppQoE
- C. AppFW
- D. SIP ALG

Answer: A

Explanation:

The service that you would implement at your edge device to prioritize VoIP traffic in this scenario is AppQoS. AppQoS is a feature that enables you to allocate bandwidth and prioritize traffic based on application signatures or custom rules. AppQoS can enhance the quality of service and experience for critical or latency-sensitive applications, such as VoIP. You can configure AppQoS policies to assign different classes of service (CoS) values or queue numbers to different applications or traffic flows. You can also define bandwidth limits, guarantees, or bursts for each class or queue. Reference: = [Application Quality of Service Overview], [Configuring Application Quality of Service]

NEW QUESTION # 20

You want to show tabular data for operational mode commands.
In this scenario, which logging parameter will provide this function?

- A. count
- B. permit
- C. session-close
- D. session-init

Answer: A

Explanation:

The logging parameter that will provide the function of showing tabular data for operational mode commands is count. The count parameter displays the number of packets and bytes that match a security policy and the action taken by the policy. The count parameter can be used with the show security policies hit-count command to display the policy counters in a tabular format. The count parameter can also be used with the show security flow session command to display the session counters in a tabular format. Reference: = show security policies hit-count, show security flow session

NEW QUESTION # 21

Regarding static attack object groups, which two statements are true? (Choose two.)

- A. You must manually add matching attack objects to a custom group.
- B. Matching attack objects are automatically added to a custom group.
- C. Group membership automatically changes when Juniper updates the IPS signature database.
- D. Group membership does not automatically change when Juniper updates the IPS signature database.

Answer: A,D

NEW QUESTION # 22

Your JIMS server is unable to view event logs.
Which two actions would you take to solve this issue? (Choose two.)

- A. Enable remote event log management within Windows Firewall on the JIMS server.
- B. Enable remote event log management within Windows Firewall on the necessary domain controllers.
- C. Enable the correct host-inbound-traffic rules on the SRX Series devices.
- D. Enable remote event log management within Windows Firewall on the necessary Exchange servers.

Answer: A,B

Explanation:

JIMS needs to access the event logs from domain controllers to function properly, as it relies on these logs to track user and device activity across the network. If the Windows Firewall on the domain controllers is blocking this access, enabling remote event log management will allow JIMS to retrieve the necessary information.

While it's less common, ensuring that any firewall settings on the JIMS server itself do not block outgoing requests or responses related to event log management is also crucial. This ensures that JIMS can send out requests and receive responses without any hindrance from its own firewall.

NEW QUESTION # 23

Which two statements are true about the vSRX? (Choose two.)

- A. UNIX is the base OS.
- **B. Linux is the base OS.**
- **C. It has VMXNET3 vNIC support.**
- D. It does not have VMXNET3 vNIC support.

Answer: B,C

Explanation:

Reference: Juniper Networks Security, Specialist (JNCIS-SEC) Study Guide, Chapter 1: Introduction to Junos Security, page 1-8.

The vSRX is a virtual security appliance that runs on a virtual machine. It provides firewall, VPN, and other security services in a virtualized environment.

The vSRX is based on a version of Junos OS that is optimized for virtualization. It runs on a Linux kernel and uses a KVM hypervisor. It supports VMware ESXi and KVM hypervisors.

The vSRX has support for VMXNET3 vNICs, which are high-performance virtual network interfaces provided by VMware. These interfaces can provide higher throughput and lower CPU utilization than other virtual NIC types.

NEW QUESTION # 24

.....

The APP online version of our JN0-336 real exam boosts no limits for the equipment being used and it supports any electronic equipment and the off-line use. If only you open it in the environment with the network for the first time you can use our JN0-336 Training Materials in the off-line condition later. It depends on the client to choose the version they favor to learn our JN0-336 study materials.
