EMEA-Advanced-Support New Exam Bootcamp, Valid Exam EMEA-Advanced-Support Blueprint

PracticeVCE EMEA-Advanced-Support study material also has a timekeeping function that allows you to be cautious and keep your own speed while you are practicing, so as to avoid the situation that you can't finish all the questions during the exam. With Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support Learning Materials, you only need to spend half your money to get several times better service than others.

Fortinet EMEA Advanced Support Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which statement is true about IPsec VPNs and SSL VPNs?

- A. All of the above
- B. Both SSL VPNs and IPsec VPNs are standard protocols
- C. SSL VPN creates a HTTPS connection. IPsec does not
- D. Either a SSL VPN or an IPsec VPN can be established between an end-user workstation and a FortiGate device

Answer: A

Explanation:

Both SSL VPN and IPsec VPN are standard protocols supported by FortiGate devices for secure remote access. SSL VPN typically uses HTTPS (TCP port 443) for encrypted communication, while IPsec uses protocols like IKE and ESP. Both can be configured between an end-user workstation (e.g., via FortiClient) and a FortiGate device, supporting various authentication methods. All options are correct, making D the correct answer. Exact extract: "SSL VPN technology uses the standard SSL/TLS protocol to provide a secure connection to the FortiGate unit. The FortiGate SSL VPN can be configured to use HTTPS..." and "IPsec VPNs use standardized protocols like IKE and ESP to create secure tunnels... FortiClient supports both IPsec and SSL VPN connections to FortiGate devices for remote access."

NEW QUESTION # 16

In FortiGate, what is the purpose of a Virtual IP (VIP)?

- A. To map an external IP to an internal IP for NAT
- B. To assign a secondary IP to a physical interface
- C. To enable load balancing for VPN tunnels
- D. To create a virtual interface for VLANs

Answer: A

Explanation:

A Virtual IP (VIP) in FortiGate maps an external IP address to an internal IP for Destination NAT (DNAT), commonly used for accessing internal servers from external networks. It is not for VLANs (B), secondary IPs (C), or VPN load balancing (D). Exact extract: "Virtual IPs (VIPs) are used for Destination NAT, mapping an external IP address to an internal IP to allow external access to internal resources, such as servers."

NEW QUESTION # 17

What is the purpose of the FortiGate 'diagnose debug flow' command?

- A. To show the packet flow through firewall policies
- B. To display real-time packet captures
- C. To troubleshoot routing table issues
- D. To monitor system performance metrics

Answer: A

Explanation:

The 'diagnose debug flow' command in FortiGate is used to troubleshoot how packets are processed through firewall policies, showing details like policy matching, NAT, and session handling. It helps identify why packets are allowed or dropped. Option A refers to packet sniffing, B to routing diagnostics, and D to performance monitoring, none of which are the primary function. Exact extract: "The diagnose debug flow command displays the packet flow through FortiGate, including policy matching, NAT, and session details, useful for troubleshooting traffic issues."

NEW QUESTION # 18

Which of the following are classful addresses? (Select all that apply below)

- A. 172.16.0.0/24
- B. 10.225.30.0/16
- C. 172.16.0.0/16
- D. 10.225.30.0/8

Answer: C,D

Explanation:

Classful addressing follows the original IP address classes: Class A (/8), Class B (/16), and Class C (/24). Option A (10.225.30.0/8) is a Class A address, and C (172.16.0.0/16) is a Class B address. Option B (10.225.30.0/16) and D (172.16.0.0/24) use non-standard masks for their respective ranges, making them classless (CIDR). The original document incorrectly lists only A. Fortinet routing supports both classful and classless addressing. Exact extract: "Classful addressing uses fixed subnet masks: Class A (/8), Class B (/16), and Class C (/24)... Addresses like 10.0.0.0/8 and 172.16.0.0/16 are classful, while non-standard masks indicate classless addressing."

NEW QUESTION # 19

What is the purpose of FortiGate's 'FortiGuard' service in security profiles?

- A. Configures VPN tunnel encryption
- B. Manages HA cluster synchronization
- C. Enables local storage of security logs
- D. Provides real-time threat intelligence updates

Answer: D

Explanation:

FortiGuard services provide real-time threat intelligence updates to FortiGate for signatures, URL databases, and anti-malware, enhancing security profiles like IPS and web filtering. It does not handle log storage (B), VPN encryption (C), or HA synchronization (D). Exact extract: "FortiGuard services deliver real-time threat intelligence, updating FortiGate with the latest signatures, URL databases, and anti-malware definitions for security profiles."

NEW QUESTION # 20

.....

Our Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) exam dumps give help to give you an idea about the actual Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) exam. You can attempt multiple Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) exam questions on the software to improve your performance. You have the option to change the topic and set the time according to the actual Fortinet EMEA-Advanced-Support Exam.
