350-701熱門認證 - 350-701最新考證

每個人心中都有一個烏托邦的夢，夢境的虛有讓人覺得心灰意冷，在現實中，其實這並不是虛有的，只要你採取一定的方是方法，一切皆有可能。Cisco的350-701考試認證將會從遙不可及變得綽手可得。這是為什麼呢，因為有PDFExamDumps Cisco的350-701考試培訓資料在手，PDFExamDumps Cisco的350-701考試培訓資料是IT認證最好的培訓資料，它以最全最新，通過率最高而聞名，而且省時又省力，有了它，你將輕鬆的通過考試。實現了你的夢想，你就有了自信，有了自信你將走向成功。

最新的 CCNP Security 350-701 免費考試真題 (Q671-Q676):

問題 #671

Which proxy mode must be used on Cisco WSA to redirect TCP traffic with WCCP?

- A. proxy gateway
- **B. transparent**
- C. redirection
- D. forward

答案: B

解題說明:

There are two possible methods to accomplish the redirection of traffic to Cisco WSA: transparent proxy mode and explicit proxy mode.

In a transparent proxy deployment, a WCCP v2-capable network device redirects all TCP traffic with a destination of port 80 or 443 to Cisco WSA, without any configuration on the client. The transparent proxy deployment is used in this design, and the Cisco ASA firewall is used to redirect traffic to the appliance because all of the outbound web traffic passes through the device and is generally managed by the same operations staff who manage Cisco WSA.

There are two possible methods to accomplish the redirection of traffic to Cisco WSA: transparent proxy mode and explicit proxy mode.

In a transparent proxy deployment, a WCCP v2-capable network device redirects all TCP traffic with a destination of port 80 or 443 to Cisco WSA, without any configuration on the client. The transparent proxy deployment is used in this design, and the Cisco ASA firewall is used to redirect traffic to the appliance because all of the outbound web traffic passes through the device and is generally managed by the same operations staff who manage Cisco WSA.

問題 #672

An organization has noticed an increase in malicious content downloads and wants to use Cisco Umbrella to prevent this activity for suspicious domains while allowing normal web traffic. Which action will accomplish this task?

- A. Set content settings to High
- B. Use destination block lists.
- **C. Configure the intelligent proxy.**
- D. Configure application block lists.

答案: C

解題說明:

Obviously, if you allow all traffic to these risky domains, users might access malicious content, resulting in an infection or data leak. But if you block traffic, you can expect false positives, an increase in support inquiries, and thus, more headaches. By only proxying risky domains, the intelligent proxy delivers more granular visibility and control.

The intelligent proxy bridges the gap by allowing access to most known good sites without being proxied and only proxying those that pose a potential risk. The proxy then filters and blocks against specific URLs hosting malware while allowing access to everything else.

Obviously, if you allow all traffic to these risky domains, users might access malicious content, resulting in an infection or data leak. But if you block traffic, you can expect false positives, an increase in support inquiries, and thus, more headaches. By only proxying risky domains, the intelligent proxy delivers more granular visibility and control.

everything else.

問題 #673

Refer to the exhibit.

A network administrator configured a site-to-site VPN tunnel between two Cisco IOS routers, and hosts are unable to communicate between two sites of VPN. The network administrator runs the debug crypto isakmp sa command to track VPN status. What is the problem according to this command output?

- A. authentication key mismatch
- B. interesting traffic was not applied
- C. hashing algorithm mismatch
- D. encryption algorithm mismatch

答案： A

解題說明：

The debug crypto isakmp sa command shows the status of the Internet Security Association and Key Management Protocol (ISAKMP) security associations (SAs). The output of this command indicates that the ISAKMP negotiation failed after several retransmissions. The most likely cause of this failure is a mismatch in the authentication key between the two peers. The authentication key is specified by the crypto isakmp key command and must be the same on both routers. If the authentication key is different, the ISAKMP messages cannot be decrypted and verified by the peers, resulting in an error. To fix this problem, the network administrator should verify and correct the authentication key on both routers and clear the existing ISAKMP SAs with the clear crypto isakmp sa command. References: 1, 2, 3, 4

問題 #674

Client workstations are experiencing extremely poor response time. An engineer suspects that an attacker is eavesdropping and making independent connections while relaying messages between victims to make them think they are talking to each other over a private connection. Which feature must be enabled and configured to provide relief from this type of attack?

- A. Link Aggregation
- B. Reverse ARP
- C. private VLANs
- D. Dynamic ARP Inspection

答案： D

問題 #675

What is the function of Cisco Cloudlock for data security?

- A. data loss prevention
- B. detects anomalies
- C. controls malicious cloud apps
- D. user and entity behavior analytics

答案： A

解題說明：

The function of Cisco Cloudlock for data security is data loss prevention (DLP). Cisco Cloudlock is a cloud-native cloud access security broker (CASB) that helps you move to the cloud safely. It protects your cloud users, data, and apps. Cloudlock's simple, open, and automated approach uses APIs to manage the risks in your cloud app ecosystem¹. One of the key features of Cloudlock is its DLP technology, which continuously monitors cloud environments to detect and secure sensitive information. It provides countless out-of-the-box policies as well as highly tunable custom policies. You can use Cloudlock's DLP to prevent data breaches, comply with regulations, and enforce data governance across SaaS, PaaS, and IaaS platforms².
