NEW QUESTION # 25

What is one advantage of upgrading to HPE Aruba Networking 700 Series APs?

- A. They are the only APs HPE Aruba Networking offers that support the 600 GHz band.
- **B. They improve accuracy for location-based services from 2m to less than 1m**
- C. They can be managed by HPE Fabric Composer.
- D. They can function as both APs and gateways for switches.

Answer: B

Explanation:

The correct answer is B because Aruba 700 Series APs (Wi-Fi 6E capable) offer ultra-precise location-based services with accuracy improved from approximately 2 meters to less than 1 meter. This enhancement is enabled by fine time measurement (FTM), advanced radio capabilities, and integrated Bluetooth 5. This makes them ideal for organizations requiring high-precision location tracking in environments such as healthcare, retail, and smart buildings.

Relevant extracts from official HPE Aruba Networking documentation:

* "Aruba 700 Series Wi-Fi 6E APs deliver enhanced location accuracy, improving positioning precision from 2 meters to sub-1-meter levels."

* "With integrated Bluetooth 5 and fine time measurement (FTM), these APs enable advanced location services including asset tracking and indoor navigation."

* "Improved accuracy supports critical business use cases such as proximity-based services, asset visibility, and IoT device management."

* "The 700 Series represents a significant step forward in Aruba's ability to deliver context-aware networking and location-based intelligence." Why the other options are incorrect:

* A Fabric Composer is a data center fabric management solution, not used for managing APs.

* B 600 GHz band support is not a Wi-Fi standard; Aruba APs support 2.4 GHz, 5 GHz, and 6 GHz (Wi-Fi 6E), not 600 GHz.

* CAPs do not function as gateways for switches; Aruba's architecture separates wireless AP roles from switching infrastructure.
