Choosing Reliable 1Z0-1111-25 Exam Bootcamp Makes It As Easy As Eating to Pass Oracle Cloud Infrastructure 2025 Observability Professional

Just like the old saying goes: "Practice is the only standard to testify truth", which means learning of theory ultimately serves practical application, in the same way, it is a matter of common sense that pass rate of a kind of 1Z0-1111-25 exam torrent is the only standard to testify whether it is effective and useful. The team of the experts in our company has an in-depth understanding of the fundamental elements that combine to produce world class 1Z0-1111-25 Guide Torrent for our customers. This expertise coupled with our comprehensive design criteria and development resources combine to create definitive 1Z0-1111-25 exam torrent.

Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which is a valid Log Category name in Oracle Cloud Infrastructure (OCI) Logging Service?

- A. VCN Logs
- **B. Custom Logs**
- C. OCI Agent Logs
- D. System Logs

Answer: B

Explanation:

In OCI Logging Service, Log Categories classify logs based on their origin or purpose.

Custom Logs (D): This is a valid Log Category for logs generated by user applications or services not natively integrated with OCI. Custom Logs are collected using agents, SDKs, or APIs and are user-defined.

Why not A, B, or C?

VCN Logs (A): Virtual Cloud Network (VCN) flow logs exist, but "VCN Logs" isn't a formal Log Category; it's a type of service log.

OCI Agent Logs (B): Agent logs are internal to Management Agents, not a user-facing Log Category.

System Logs (C): While system logs exist in some contexts, OCI Logging uses specific categories like "Audit Logs" or "Service Logs," not a generic "System Logs."

"Custom Logs" is explicitly supported for user-generated log data.

NEW QUESTION # 20

Which Logging Analytics concept represents an asset on your host that could provide log data?

- A. Entity
- **B. Source**
- C. Parser
- D. Association

Answer: B

Explanation:

In OCI Logging Analytics, a Source defines the origin of log data from an asset on a host.

Source (B): Represents a log-generating asset (e.g., a file, database audit log, or Windows event log), specifying its location, format, and collection frequency. It's associated with an Entity to enable log ingestion and parsing.

Why not A, C, or D?

Association (A): Links a Source to an Entity, not the asset itself.

Entity (C): A logical representation of a resource (e.g., a host), not the log source.

Parser (D): Extracts fields from logs, not the asset providing data.

Sources are foundational to log collection in Logging Analytics.

NEW QUESTION # 21

Which of the following is required to enable Stack Monitoring?

- A. User group for VCN collection
- **B. Dynamic group for discovery service**
- C. Machine Learning group for resource associations

Answer: B

Explanation:

To enable Stack Monitoring:

Dynamic group for discovery service (A): A dynamic group defines resources (e.g., compute instances) that Stack Monitoring can discover and monitor. A policy granting permissions to this group is also required.

Why not B or C?

Machine Learning group (B): Not a valid OCI concept for Stack Monitoring.

User group for VCN collection (C): User groups manage human access, not service discovery.

This setup ensures Stack Monitoring can access and monitor resources.

NEW QUESTION # 22

Which TWO Observability and Management (O&M) services are supported by Management Agent? (Choose two.)

- A. Logging Analytics
- B. Enterprise Manager
- C. Application Performance Management
- D. Database Management

Answer: A,B

Explanation:

Management Agents collect and send data to OCI services:

Logging Analytics (B): Agents gather log data from various sources (e.g., files, databases) and send it to Logging Analytics for indexing and analysis.

Enterprise Manager (C): Agents integrate with Oracle Enterprise Manager, enabling monitoring of on-premises or cloud targets within OCI.

Why not A or D?

Application Performance Management (A): Uses Java and Browser Agents, not Management Agents.

Database Management (D): Leverages agents indirectly via other services, not a direct target.

These services leverage Management Agents for observability.

NEW QUESTION # 23

What two APM agents can Application Performance Monitoring use to collect data? (Choose two.)

- A. Java Agent
- B. Management Agent
- C. Browser Agent
- D. Cloud Agent

Answer: A,C

Explanation:

OCI APM uses specific agents for data collection:

Java Agent (B): Attaches to Java applications to collect traces, metrics, and errors for APM.

Browser Agent (D): A JavaScript snippet embedded in web pages to collect Real User Monitoring (RUM) data (e.g., page load times).

Why not A or C?

Management Agent (A): Used for Stack Monitoring/Operations Insights, not APM.

Cloud Agent (C): Monitors compute instances, not an APM-specific agent.

These agents target application and user experience monitoring.

NEW QUESTION # 24

.....

These Oracle Cloud Infrastructure 2025 Observability Professional (1Z0-1111-25) mock tests will give you real 1Z0-1111-25 exam experience. This feature will boost your confidence when taking the Oracle Cloud Infrastructure 2025 Observability Professional (1Z0-1111-25) certification exam. The 24/7 support system has been made for you so you don't feel difficulty while using the product. In addition, we offer free demos and up to 1 year of free Oracle Dumps updates. Buy It Now!
