問題 #50

Which intensity setting for anomaly alerts is used for the measurement of 100 events over 30 days?

- A. High
- B. Very High
- C. Low
- **D. Medium**

答案: D

解題說明:

In the context of setting anomaly alert intensities in Prisma Cloud, an intensity setting of "Medium" could be used for the measurement of 100 events over 30 days. This setting indicates a moderate level of anomaly detection sensitivity, which is suitable for environments where there is a need to balance between detecting potential security issues and minimizing false positives. 問題 #51

Which three actions are required in order to use the automated method within Azure Cloud to streamline the process of using remediation in the identity and access management (IAM) module? (Choose three.)

- A. Integrate with Azure Service Bus.
- B. Install azure.servicebus & requests library.
- C. Configure IAM AWS remediation script.
- D. Install boto3 & requests library.
- E. Configure IAM Azure remediation script.

答案: A,B,E

解題說明:

To use the automated method within Azure Cloud for streamlining the process of using remediation in the identity and access management (IAM) module, the required actions include configuring the IAM Azure remediation script, integrating with Azure Service Bus, and installing the azure.servicebus & requests library.

These steps ensure that the automated remediation system can communicate effectively with Azure services, execute the necessary remediation actions, and address IAM-related alerts by adjusting permissions and access controls as needed. This automation helps maintain a secure and compliant cloud environment by promptly addressing potential IAM issues.

問題 #52

Given the following information, which twistcli command should be run if an administrator were to exec into a running container and scan it from within using an access token for authentication?

* Console is located at <https://prisma-console.mydomain.local>

* Token is: TOKEN_VALUE

* Report ID is: REPORTID

* Container image running is: myimage:latest

- A. twistcli images scan --console-address <https://prisma-console.mydomain.local> --auth-token TOKEN_VALUE - containerized -vulnerability-details REPORT_ID
- B. twistcli images scan -console-address <https://prisma-console.mydomain.local> -auth-token MY_TOKEN -local-scan -details myimage:latest
- C. twistcli images scan --address <https://prisma-console.mydomain.local> -token TOKENVALUE - containerized -details myimage:latest
- D. twistcli images scan -address <https://prisma-console.mydomain.local> -token TOKEN_VALUE - containerized --details REPORT_ID

答案: D

解題說明:

The response from Jihe would be correct if this wasn't be run from within the container. In the question, we are running from inside the container, and therefore there is no need to specify an image/tarball. https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/tools/twistcli_scan_image

Further down in the documentation linked by Jihe, there is a section that shows the proper syntax when running twistcli from within a container. The example there is almost a perfect copy of this question. Spippolo has the correct response.

```
$ docker run \
-v /PATH/TO/TWISTCLI_DIR:/tools \
-e TW_TOKEN=<API_TOKEN> \
-e TW_CONSOLE=<COMPUTE_CONSOLE> \
--entrypoint="" \
<IMAGE_NAME> \
/tools/twistcli images scan \
--containerized \
--details \
```

```
--address $TW_CONSOLE \  
--token $TW_TOKEN \  
<REPORT_ID>

問題 #53

The security team wants to protect a web application container from an SQLi attack. Which type of policy should the administrator create to protect the container?

- A. CNAF
- B. Runtime
- C. Compliance
- D. CNMF

答案：A

解題說明：

To protect a web application container from an SQL Injection (SQLi) attack, the administrator should create a Cloud Native Application Firewall (CNAF) policy. CNAF policies are designed to protect applications running in containers from various types of attacks, including SQLi, by inspecting the traffic going to and from the containerized applications and blocking malicious requests. 問題 #54

Which three serverless runtimes are supported by Prisma Cloud for vulnerability and compliance scans? (Choose three.)

- A. Python
- B. Java
- C. Node.js
- D. Swift
- E. Dart

答案：A,B,C

解題說明：

Prisma Cloud supports several serverless runtimes for vulnerability and compliance scans, including Python, Java, and Node.js. These runtimes are widely used in the development of serverless applications, which are designed to run in stateless compute containers that are event-triggered and fully managed by cloud services.

By providing vulnerability and compliance scans for these serverless runtimes, Prisma Cloud helps organizations identify and remediate security issues within their serverless applications, ensuring that they adhere to security best practices and compliance standards. This capability is crucial for maintaining the security and integrity of serverless architectures, where traditional security approaches may not be applicable.
