Are you finding it challenging to take the Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) Certification Exam due to your busy schedule? Well, worry no more! Preparing for your NCP-US-6.5 exam has become convenient and hassle-free. You can now study from the comfort of your home, without needing to attend any classes or disrupt your existing schedule. With TorrentValid, you have access to a reliable and comprehensive source of NCP-US-6.5 Exam Questions for your Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam, ensuring your success in the test. Let's explore how TorrentValid can assist you in acing your real Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) quiz quickly and smoothly.

We have the NCP-US-6.5 Questions and answers with high accuracy and timely update. Our professional team checks NCP-US-6.5 answers and questions carefully with their professional knowledge. We also have the latest information about the exam center, and will update the version according to the new requirements. Pass guarantee and money back guarantee are also our principles, and if you have any questions, you can also consult the service staff.

**2026 New NCP-US-6.5 Exam Objectives | High-quality 100% NCP-US-6.5**

## Accuracy: Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 100% Pass

We here guarantee that we will never sell the personal information of our candidates. There is no need for you to worry about the individual privacy under our rigorous privacy NCP-US-6.5 protection system. As regards purchasing, our website and NCP-US-6.5 study materials are absolutely safe and free of virus. For further consideration we will provide professional IT personnel to guide your installation and the use of our NCP-US-6.5 Study Materials remotely. So you can buy our NCP-US-6.5 study materials without any misgivings. If you have any questions, please you contact us online through the email.

### Nutanix NCP-US-6.5 Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"><li>• Given a scenario, configure shares, buckets, and or Volume Groups</li><li>• Troubleshoot a failed upgrade for Files</li><li>• Objects</li></ul>          |
| Topic 2 | <ul style="list-style-type: none"><li>• Configure and Utilize Nutanix Unified Storage</li><li>• Identify the steps to deploy Nutanix Objects</li></ul>   |
| Topic 3 | <ul style="list-style-type: none"><li>• Identify the steps to deploy Nutanix Files</li><li>• Given a scenario, determine product and sizing parameters</li></ul>                                 |
| Topic 4 | <ul style="list-style-type: none"><li>• Configure Nutanix Files with advanced features</li><li>• Determine the appropriate method to ensure data availability</li><li>• recoverability</li></ul> |
| Topic 5 | <ul style="list-style-type: none"><li>• Deploy and Upgrade Nutanix Unified Storage</li><li>• Perform upgrades</li><li>• maintenance for Files</li><li>• Objects implementations</li></ul>        |
| Topic 6 | <ul style="list-style-type: none"><li>• Utilize File Analytics for data security</li><li>• Troubleshoot Nutanix Unified Storage</li><li>• Configure Nutanix Volumes</li></ul>                    |
| Topic 7 | <ul style="list-style-type: none"><li>• Troubleshoot issues related to Nutanix Objects</li><li>• Troubleshoot issues related to Nutanix Volumes</li></ul>  |
| Topic 8 | <ul style="list-style-type: none"><li>• Analyze and Monitor Nutanix Unified Storage</li><li>• Describe the use of Data Lens for data security</li></ul>  |

### Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q43-Q48):

#### NEW QUESTION # 43

An administrator wants to monitor their Files environment for suspicious activities, such mass deletion or access denials.

How can the administrator be alerted to such activities?

How can the administrator be alerted to such activities?

- A. Deploy the Files Analytics VM. and configure anomaly rules.
- B. Configure Alerts & Events in the Files Console, filtering for Warning severity.
- C. Configure Files to use ICAP servers, with monitors for desired activities.
- D. Create a data protection policy in the Files view in Prism Central.

**Answer: A**

Explanation:

The administrator can monitor their Files environment for suspicious activities, such as mass deletion or access denials, by deploying the File Analytics VM and configuring anomaly rules. File Analytics is a feature that provides insights into the usage and activity of file data stored on Files. File Analytics consists of a File Analytics VM (FAVM) that runs on a Nutanix cluster and communicates with the File Server VMs (FSVMs) that host the file shares. File Analytics can alert the administrator when there is an unusual or suspicious activity on file data, such as mass deletion, encryption, permission change, or access denial. The administrator can configure anomaly rules to define the threshold, time window, and notification settings for each type of anomaly. References: Nutanix Files Administration Guide, page 93; Nutanix File Analytics User Guide

#### NEW QUESTION # 44

An organization currently has two Objects instances deployed between two sites. Both instances are managed via manage the same Prism Central to simplify management.

The organization has a critical application with all data in a bucket that needs to be replicated to the secondary site for DR purposes. The replication needs to be asynchronous, including all delete the marker versions.

- A. Use a protection Domain to replicate the objects Volume Group.
- **B. Create a Bucket replication rule, set the destination Objects instances.**
- C. With Object Browser, upload the data at the destination site.
- D. Leverage the Objects Baseline Replication Tool from a Linux VM

**Answer: B**

Explanation:

The administrator can achieve this requirement by creating a bucket replication rule and setting the destination Objects instance.

Bucket replication is a feature that allows administrators to replicate data from one bucket to another bucket on a different Objects instance for disaster recovery or data migration purposes.

Bucket replication can be configured with various parameters, such as replication mode, replication frequency, replication status, etc. Bucket replication can also replicate all versions of objects, including delete markers, which are special versions that indicate that an object has been deleted. By creating a bucket replication rule and setting the destination Objects instance, the administrator can replicate data from one Objects instance to another asynchronously, including all delete markers and versions. References: Nutanix Objects User Guide, page 19; Nutanix Objects Solution Guide, page 9 Nutanix Objects, part of Nutanix Unified Storage (NUS), supports replication of buckets between Object Store instances for disaster recovery (DR). The organization has two Objects instances across two sites, managed by the same Prism Central, and needs to replicate a bucket's data asynchronously, including delete marker versions, to the secondary site.

Analysis of Options:

\* Option A (With Object Browser, upload the data at the destination site): Incorrect. The Object Browser is a UI tool in Nutanix Objects for managing buckets and objects, but it is not designed for replication. Manually uploading data to the destination site does not satisfy the requirement for asynchronous replication, nor does it handle delete marker versions automatically.

\* Option B (Leverage the Objects Baseline Replication Tool from a Linux VM): Incorrect. The Objects Baseline Replication Tool is not a standard feature in Nutanix Objects documentation. While third-party tools or scripts might be used for manual replication, Nutanix provides a native solution for bucket replication, making this option unnecessary and incorrect for satisfying the requirement.

\* Option C (Use a Protection Domain to replicate the Objects Volume Group): Incorrect. Protection Domains are used in Nutanix for protecting VMs and Volume Groups (block storage) via replication, but they do not apply to Nutanix Objects. Objects uses bucket replication rules for DR, not Protection Domains.

\* Option D (Create a Bucket replication rule, set the destination Objects instance): Correct. Nutanix Objects supports bucket replication rules to replicate data between Object Store instances asynchronously. This feature allows the organization to replicate the bucket to the secondary site, including all versions (such as delete marker versions), as required. The replication rule can be configured in Prism Central, specifying the destination Object Store instance, and it supports asynchronous replication for DR purposes.

Why Option D?

Bucket replication in Nutanix Objects is the native mechanism for asynchronous replication between Object Store instances. It supports replicating all versions of objects, including delete marker versions (which indicate deleted objects in a versioned bucket), ensuring that the secondary site has a complete replica of the bucket for DR. Since both Object Store instances are managed by the same Prism Central, the administrator can easily create a replication rule to meet the requirement.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Administration Guide (available on the Nutanix Portal):

"Nutanix Objects supports asynchronous bucket replication for disaster recovery. To replicate a bucket to a secondary site, create a bucket replication rule in Prism Central, specifying the destination Object Store instance. The replication rule can be configured to include all versions, including delete marker versions, ensuring that the secondary site maintains a complete replica of the bucket for DR purposes."

:  
Nutanix Objects Administration Guide, Version 4.0, Section: "Bucket Replication for Disaster Recovery" (Nutanix Portal).  
Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Replication Features".

#### NEW QUESTION # 45

What are two network requirements for a four-node FSVM deployment? (Choose two.)

- A. Four available IP addresses on the Client network
- **B. Five available IP addresses on the Client network**
- C. Five available IP addresses on the Storage network
- D. Four available IP addresses on the Storage network

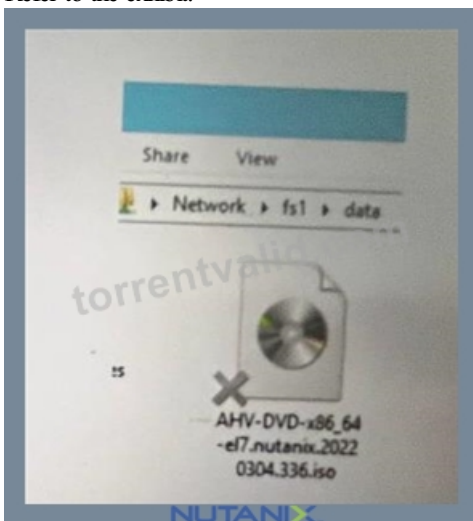

**Answer: B**

Explanation:

The two network requirements for a four-node FSVM deployment are five available IP addresses on the Client network and five available IP addresses on the Storage network. The Client network is used for communication between the FSVMs and the clients, while the Storage network is used for communication between the FSVMs and the CVMs. For each FSVM, one Client IP and one Storage IP are required. Additionally, one extra Client IP is required for the file server VIP (Virtual IP), which is used as a single point of access for all shares and exports on the file server. Reference: Nutanix Files Administration Guide, page 28; Nutanix Files Solution Guide, page 7

#### NEW QUESTION # 46

Refer to the exhibit.

What does the "X" represent on the icon?

- A. Tiered File
- **B. Distributed shared file**
- C. Corrupt ISO
- D. Share Disconnected File

**Answer: B**

Explanation:

The "X" on the icon represents a distributed shared file, which is a file that belongs to a distributed share or export. A distributed share or export is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs. The "X" indicates that the file is not hosted by the current FSVM, but by another FSVM in the cluster. The "X" also helps to identify which files are eligible for migration when using the Nutanix Files Migration Tool. Reference: Nutanix Files Administration Guide, page 34; Nutanix Files Migration Tool User Guide, page 10

#### NEW QUESTION # 47

An administrator has performed an AOS upgrade, but noticed that the compression on containers is not happening. What is the delay before compression begins on the Files container?

- A. 24 hours
- **B. 12 hours**
- C. 60 minutes
- D. 30 minutes

**Answer: B**

Explanation:

The delay before compression begins on the Files container is 12 hours. Compression is a feature that reduces the storage space required for data by applying an algorithm that eliminates redundant or unnecessary bits. Compression can improve the storage efficiency and performance of Files. Compression is enabled by default on the Files container and runs in the background as a low-priority task. Compression does not start immediately after an AOS upgrade, but waits for 12 hours to avoid interfering with other high-priority tasks or operations. Reference: Nutanix Files Administration Guide, page 24; Nutanix Files Solution Guide, page 10

## NEW QUESTION # 48

.....

Passing the NCP-US-6.5 certification can prove that you are very competent and excellent and you can also master useful knowledge and skill through passing the test. Purchasing our NCP-US-6.5 guide torrent can help you pass the exam and it costs little time and energy. The NCP-US-6.5 exam questions have simplified the sophisticated notions. The software boosts varied self-learning and self-assessment functions to check the learning results. The software of our NCP-US-6.5 Test Torrent provides the statistics report function and help the students find the weak links and deal with them.
