## ASIS-PSP New Braindumps Questions - New ASIS-PSP Test Book

If you want to pass the exam in the shortest time, our ASIS-PSP study materials can help you achieve this dream. Our ASIS-PSP learning quiz according to your specific circumstances, for you to develop a suitable schedule and learning materials, so that you can prepare in the shortest possible time to pass the exam needs everything. If you use our ASIS-PSP training prep, you only need to spend twenty to thirty hours to practice our ASIS-PSP study materials, then you are ready to take the exam and pass it successfully.

ASIS-PSP (Physical Security Professional) Exam is a certification exam offered by the American Society for Industrial Security (ASIS) International. ASIS-PSP exam is designed to test the knowledge, skills, and abilities of professionals who work in the field of physical security. The PSP certification is widely recognized throughout the security industry as a mark of excellence and expertise in the field of physical security.

One of the key benefits of obtaining the ASIS-PSP Certification is that it demonstrates to employers and clients that you have the knowledge and skills needed to effectively manage physical security systems. This can lead to increased job opportunities, higher salaries, and more challenging assignments. Additionally, the certification is recognized internationally, which can be particularly valuable for professionals who work in global organizations.

## ASIS Physical Security Professional Exam Sample Questions (Q27-Q32):

### NEW QUESTION # 27

Which of the following is a key factor to be considered when evaluating whether a particular facility is at risk for a bombing?

- A. Are any nearby buildings a likely target of attack?
- B. Is the building located in a densely populated, urban area?
- C. Does the building have a high occupancy rate?
- D. Are the building tenants in both domestic and international businesses?

**Answer: A**

Explanation:

Comprehensive Detailed Explanation:

When assessing bombing risk, proximity to high-value or symbolic targets is a significant factor. Even if the facility itself isn't a primary target, it may suffer collateral damage due to its location near another targeted building. This is a key aspect of blast risk assessments.

A and C (urban area, high occupancy) increase general risk but are not definitive on their own.

D (domestic/international tenants) may affect threat level but is less relevant than target adjacency.

#### **NEW QUESTION # 28**

The ongoing task of security management is to identify potential areas of loss and to develop and install appropriate security countermeasures, this process is called \_\_\_\_\_.

- A. Business Evaluation
- B. Security Reimbursement
- C. Risk Analysis
- **D. Risk management**

**Answer: D**

Explanation:

Risk management is the continuous and proactive process of identifying areas where a business may suffer losses, assessing the likelihood and potential impact of those losses, and implementing security countermeasures to minimize or eliminate them. This function ensures that organizational assets-people, property, and information-are protected against threats such as theft, sabotage, natural disasters, and operational failures.

#### **NEW QUESTION # 29**

When sudden widespread destruction of data both on the computer system and on the peripheral devices occurs, the machine is possibly infected with a:

- **A. Catastrophic Virus**
- B. Innocuous Bug
- C. Trojan Horse
- D. Hostile worm

**Answer: A**

#### **NEW QUESTION # 30**

A set of unwanted instructions executed on a computer and resulting in a variety of effects is called:

- **A. All of the above**
- B. Bug
- C. Virus
- D. Worm

**Answer: A**

Explanation:

A virus is a type of malicious software that attaches itself to legitimate files and spreads when those files are executed.

A worm is a standalone malware program that replicates itself to spread to other computers without needing to attach to a host file.

A bug refers to an error or flaw in software, but in the context of this question (malicious instructions causing effects), it can contribute to vulnerabilities exploited by malware.

Since all these can involve sets of unwanted instructions leading to harmful effects, "All of the above" is the most accurate answer.
