

# F5 F5CAB2 Positive Feedback & F5CAB2 Instant Access

P.S. Free 2026 F5 F5CAB2 dumps are available on Google Drive shared by Exam4Tests: <https://drive.google.com/open?id=1GI678yBgOSZIEy9MNbMo37VV133FQFtj>

We promise that using F5CAB2 certification training materials of Exam4Tests, you will pass F5CAB2 exam in your first try. If not or any problems in F5CAB2 certification training materials, we will refund fully. What's more, after you purchase our F5CAB2 Certification Training materials, Exam4Tests will offer update service in one year.

## F5 F5CAB2 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Define ADC application objects: This domain covers ADC basics including application objects, load balancing methods, server selection, and key ADC features and benefits.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Determine expected traffic behavior based on configuration: This domain focuses on predicting traffic behavior based on persistence, processing order, object status, egress IPs, and connection</li><li>rate limits.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Identify the different virtual server types: This domain covers BIG-IP virtual server types: Standard, Forwarding, Stateless, Reject, Performance Layer 4, and Performance HTTP.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Explain high availability (HA) concepts: This domain addresses HA concepts including integrity methods, implementation approaches, and advantages of high availability configurations.</li></ul>

## F5CAB2 Instant Access & New F5CAB2 Study Guide

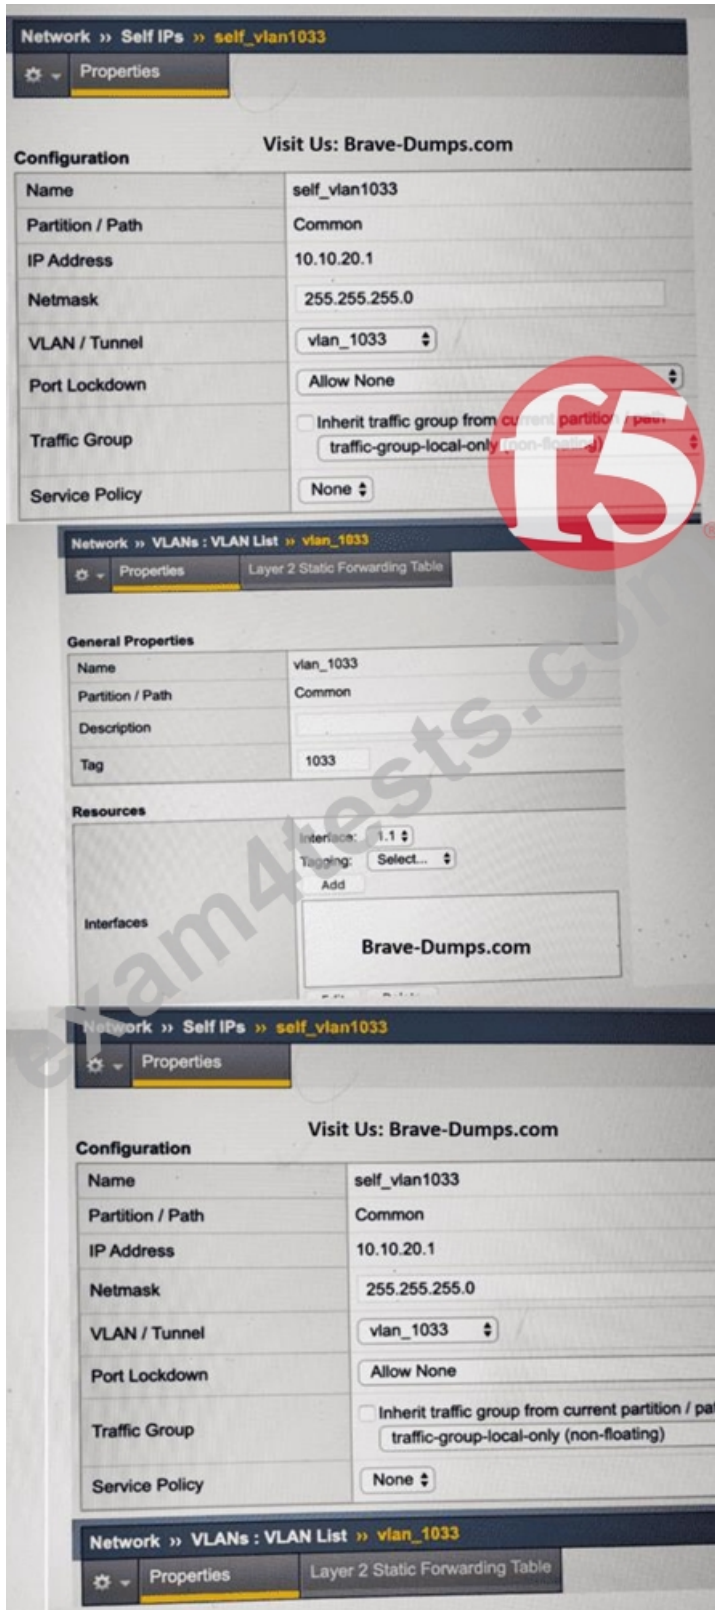

As is known to us, the leading status of the knowledge-based economy has been established progressively. It is more and more important for us to keep pace with the changeable world and improve ourselves for the beautiful life. So the F5CAB2 certification has also become more and more important for all people. Because a lot of people long to improve themselves and get the decent job. In this circumstance, more and more people will ponder the question how to get the F5CAB2 Certification successfully in a short time. And our F5CAB2 exam questions will help you pass the F5CAB2 exam for sure.

## F5 BIG-IP Administration Data Plane Concepts (F5CAB2) Sample Questions

**(Q63-Q68):**

**NEW QUESTION # 63**

Refer to the exhibit.

The network team creates a new VLAN on the switches. The BIG-IP Administrator creates a new VLAN and a Self IP on the BIG-IP device, but the servers on the new VLAN are NOT reachable from the BIG-IP device. Which action should the BIG-IP Administrator take to resolve this issue? (Choose one answer)

- A. Create a Floating Self IP address
- B. Assign a physical interface to the new VLAN

- C. Change Auto Last Hop to enabled
- D. Set Port Lockdown of the Self IP to Allow All

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation (BIG-IP Administration - Data Plane Concepts):

For BIG-IP to send or receive traffic on a VLAN, that VLAN must be bound to a physical interface or a trunk. Creating a VLAN object and a Self IP alone is not sufficient to establish data-plane connectivity.

From the exhibit:

The VLAN (vlan\_1033) exists and has a tag defined.

A Self IP is configured and associated with the VLAN.

However, traffic cannot reach servers on that VLAN.

This indicates a Layer 2 connectivity issue, not a Layer 3 or HA issue.

Why assigning a physical interface fixes the problem:

BIG-IP VLANs do not carry traffic unless they are explicitly attached to:

A physical interface (e.g., 1.1), or

A trunk

Without an interface assignment, the VLAN is effectively isolated and cannot transmit or receive frames, making servers unreachable regardless of correct IP addressing.

Why the other options are incorrect:

A . Set Port Lockdown to Allow All

Port Lockdown controls which services can be accessed on the Self IP (management-plane access), not whether BIG-IP can reach servers on that VLAN.

B . Change Auto Last Hop to enabled

Auto Last Hop affects return traffic routing for asymmetric paths. It does not fix missing Layer 2 connectivity.

D . Create a Floating Self IP address

Floating Self IPs are used for HA failover. They do not resolve reachability issues on a single device when the VLAN itself is not connected to an interface.

Conclusion:

The servers are unreachable because the VLAN has no physical interface assigned. To restore connectivity, the BIG-IP Administrator must assign a physical interface (or trunk) to the VLAN, enabling Layer 2 traffic flow.

## NEW QUESTION # 64

Which virtual server type is being configured in the screenshot? (Choose one answer.)

- A. Forwarding IP
- B. Standard
- C. Performance Layer 4

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation (BIG-IP Administration - Data Plane Concepts):

The configuration shown matches a Performance Layer 4 virtual server because it is explicitly using a FastL4 profile:

The screenshot shows Protocol: TCP and Protocol Profile (Client): fastL4.

In BIG-IP data plane terms, FastL4 is the hallmark of a Performance (Layer 4) virtual server, designed to process connections at Layer 4 with minimal overhead (high throughput/low latency) compared to full proxy L7 processing.

The screenshot also shows HTTP Profile (Client): None (and HTTP server profile effectively not in use).

A Standard virtual server commonly uses full-proxy features and frequently includes L7 profiles (like HTTP) when doing HTTP-aware load balancing, header manipulation, cookie persistence, etc. In contrast, a Performance L4 virtual server typically does not use an HTTP profile because it is not doing HTTP-aware (Layer 7) processing.

It is not a Forwarding IP virtual server:

A Forwarding (IP) virtual server is used to route/forward packets (often without load balancing to pool members in the same way as Standard/Performance VS) and is selected by choosing a forwarding type. The presence of a TCP protocol with a FastL4 client profile aligns with a Layer 4 load-balancing style virtual server, not a packet-forwarding virtual server type.

Conclusion: Because the configuration is TCP-based and explicitly uses fastL4 with no HTTP profile, the expected BIG-IP virtual server type is Performance Layer 4 (Option C).

### NEW QUESTION # 65

Which of the following lists the order of preference from most preferred to least preferred when BIG-IP processes and selects a virtual server? (Choose one answer)

- **A. Destination host address # Source host address # Service port**
- B. Source host address # Service port # Destination host address
- C. Service port # Destination host address # Source host address

**Answer: A**

Explanation:

The BIG-IP system uses a specific precedence algorithm to determine which virtual server (listener) should process an incoming packet when multiple virtual servers might match the criteria. Since BIG-IP version 11.3.0, the system evaluates three primary factors in a fixed order of importance:

\* **Destination Address:** The system first looks for the most specific destination match. A "Host" address (mask /32) is preferred over a "Network" address (mask /24, /16, etc.), which is preferred over a "Wildcard" (0.0.0.0/0).

\* **Source Address:** If multiple virtual servers have identical destination masks, the system then evaluates the source address criteria. Again, a specific source host match is preferred over a source network or a wildcard source.

\* **Service Port:** Finally, if both destination and source specifications are equal, the system checks the port. A specific port match (e.g., 80) is preferred over a wildcard port (e.g., or 0).

Following this logic, a virtual server configured with a specific destination host, a specific source host, and a specific service port represents the highest level of specificity and thus the highest preference.

### NEW QUESTION # 66

Which event is always triggered when a client initially connects to a virtual server configured with an HTTP profile?

- **A. CLIENT\_ACCEPTED**
- B. HTTP\_REQUEST
- C. HTTP\_DATA
- D. CLIENT\_DATA

**Answer: A**

### NEW QUESTION # 67

When using the setup utility to configure a redundant pair, you are asked to provide a "Failover Peer IP". Which address is this?

- A. an address of the other system in its management network
- **B. an address of the other system in a redundant pair configuration**
- C. an address on the current system used to listen for failover messages from the partner BIG-IP
- D. an address on the current system used to initiate mirroring and network failover heartbeat messages

**Answer: B**

Explanation:

When establishing a redundant pair, each device must know where to send its health heartbeats and sync data.

\* **The Peer IP:** The Failover Peer IP is the IP address belonging to the other BIG-IP device in the HA pair.

This is typically a self-IP on a dedicated "HA" or "Internal" VLAN, or the Management IP.

\* **Purpose:** It identifies the destination for the "Heartbeat" (the "Are you alive?" check).

\* **Setup Context:** During the initial setup, you tell Device A to look for Device B at its "Failover Peer IP," and you tell Device B to look for Device A at its respective "Failover Peer IP."

### NEW QUESTION # 68

.....

Our F5CAB2 exam torrent has three versions which people can choose according to their actual needs: PDF, PC and APP versions. The version of PDF is easy to download, so people can learn F5CAB2 guide torrent anywhere if they have free time. As for

PC version, it can simulated real operation of test environment, users can test themselves in mock exam in limited time. This version of our F5CAB2 Exam Torrent is applicable to windows system computer. Based on Web browser, the APP version of F5CAB2 exam questions can be available as long as there is a browser device can be used.
