Before the clients decide to buy our SY0-701 test guide they can firstly be familiar with our products. The clients can understand the detailed information about our products by visiting the pages of our products on our company's website. Firstly you could know the price and the version of our CompTIA Security+ Certification Exam study question, the quantity of the questions and the answers, the merits to use the products, the discounts, the sale guarantee and the clients' feedback after the sale. Secondly you could look at the free demos to see if the questions and the answers are valuable. You only need to fill in your mail address and you could download the demos immediately. So you could understand the quality of our SY0-701 Certification file.

Our products boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our SY0-701 study materials. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam. Our products also boost multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the SY0-701 Study Materials efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the SY0-701 study materials.

Topic	Details
Topic 1	<ul style="list-style-type: none">Security Architecture: Here, you'll learn about security implications across different architecture models, applying security principles to secure enterprise infrastructure in scenarios, and comparing data protection concepts and strategies. The topic also delves into the importance of resilience and recovery in security architecture.
Topic 2	<ul style="list-style-type: none">Threats, Vulnerabilities, and Mitigations: In this topic, you'll find discussions comparing threat actors and motivations, explaining common threat vectors and attack surfaces, and outlining different types of vulnerabilities. Moreover, the topic focuses on analyzing indicators of malicious activity in scenarios and exploring mitigation techniques used to secure enterprises against threats.
Topic 3	<ul style="list-style-type: none">General Security Concepts: This topic covers various types of security controls, fundamental security concepts, the importance of change management processes in security, and the significance of using suitable cryptographic solutions.
Topic 4	<ul style="list-style-type: none">Security Operations: This topic delves into applying common security techniques to computing resources, addressing security implications of proper hardware, software, and data asset management, managing vulnerabilities effectively, and explaining security alerting and monitoring concepts. It also discusses enhancing enterprise capabilities for security, implementing identity and access management, and utilizing automation and orchestration for secure operations.
Topic 5	<ul style="list-style-type: none">Security Program Management and Oversight: Finally, this topic discusses elements of effective security governance, the risk management process, third-party risk assessment, and management processes. Additionally, the topic focuses on security compliance requirements, types and purposes of audits and assessments, and implementing security awareness practices in various scenarios.

CompTIA Security+ Certification Exam Sample Questions (Q286-Q291):

NEW QUESTION # 286

Which of the following solutions would most likely be used in the financial industry to mask sensitive data?

- A. Steganography
- B. Hashing
- C. Tokenization
- D. Salting

Answer: C

Explanation:

Tokenization is widely used in the financial industry to mask sensitive information such as credit card numbers, bank account details, or payment tokens. Tokenization replaces sensitive data with harmless surrogate values (tokens) that maintain format and usability but reveal nothing if intercepted.

Security+ SY0-701 highlights tokenization as a preferred method for PCI-DSS-regulated environments because:

- * It reduces exposure of actual sensitive data
- * It lowers compliance scope
- * Tokens can be mapped back to real data only through a secure token vault
- * It prevents attackers from accessing meaningful information

Hashing (B) is one-way and cannot be reversed, making it unsuitable for financial transactions that require retrieving original values.

Salting (C) enhances password hashing security but does not mask data.

Steganography (D) hides data inside images or media files, not used for structured data protection. Thus, the correct answer is A: Tokenization.

NEW QUESTION # 287

A security operations center determines that the malicious activity detected on a server is normal. Which of the following activities describes the act of ignoring detected activity in the future?

- A. Aggregating
- **B. Tuning**
- C. Quarantining
- D. Archiving

Answer: B

Explanation:

Tuning is the activity of adjusting the configuration or parameters of a security tool or system to optimize its performance and reduce false positives or false negatives. Tuning can help to filter out the normal or benign activity that is detected by the security tool or system, and focus on the malicious or anomalous activity that requires further investigation or response. Tuning can also help to improve the efficiency and effectiveness of the security operations center by reducing the workload and alert fatigue of the analysts. Tuning is different from aggregating, which is the activity of collecting and combining data from multiple sources or sensors to provide a comprehensive view of the security posture. Tuning is also different from quarantining, which is the activity of isolating a potentially infected or compromised device or system from the rest of the network to prevent further damage or spread. Tuning is also different from archiving, which is the activity of storing and preserving historical data or records for future reference or compliance. The act of ignoring detected activity in the future that is deemed normal by the security operations center is an example of tuning, as it involves modifying the settings or rules of the security tool or system to exclude the activity from the detection scope. Therefore, this is the best answer among the given options.

NEW QUESTION # 288

A security administrator must use a strategy to protect the company's data. The security administrator decides to deploy FDE on the end user devices and TLS for all web connections.

Which of the following concepts are being used? (Choose two.)

- A. Data in use
- B. Data sovereignty
- C. Data redundancy
- **D. Data in transit**
- E. Data segmentation
- **F. Data at rest**

Answer: D,F

Explanation:

TLS - Data in transit: TLS encrypts sessions as information moves across networks, preventing interception or tampering while the data is traveling.

FDE - Data at rest: Full-disk encryption protects files stored on the device; if the drive is lost or stolen, the data remains unreadable without the key.

NEW QUESTION # 289

Which of the following should an organization use to ensure that it can review the controls and performance of a service provider or vendor?

- A. Memorandum of agreement
- **B. Right-to-audit clause**
- C. Supply chain analysis
- D. Service-level agreement

Answer: B

Explanation:

A right-to-audit clause gives an organization the legal ability to inspect and verify a service provider's or vendor's controls, processes, and compliance with contractual obligations, ensuring transparency and accountability.

NEW QUESTION # 290

A security analyst is creating base for the server team to follow when hardening new devices for deployment. Which of the following best describes what the analyst is creating?

- A. Cybersecurity framework
- B. Change management procedure
- C. Secure configuration guide
- D. Information security policy

Answer: C

Explanation:

The security analyst is creating a "secure configuration guide," which is a set of instructions or guidelines used to configure devices securely before deployment. This guide ensures that the devices are set up according to best practices to minimize vulnerabilities and protect against potential security threats.
