It covers parallel case processing, locking strategies, and pre</li><li>• post-processing for efficient case flow. Service-level agreement configurations are also extended and managed.</li></ul>

## Pegasystems Certified Pega Senior System Architect 23 Sample Questions (Q15-Q20):

### NEW QUESTION # 15

When deploying mashup code in a webpage, which option is necessary to ensure that Pega Platform accepts incoming requests?

- A. Establish a private tunnel from the host to Pega Platform.
- B. Ensure the host is configured to support HTTPS.
- C. Enable authentication policies on Pega Platform.
- D. **Add the host URL in the Pega application.**

**Answer: D**

Explanation:

When deploying mashup code in a webpage, it is necessary to add the host URL in the Pega application to ensure that Pega Platform accepts incoming requests. This is part of configuring the trusted origins within the application's settings. Reference: Pega official documentation on Pega Web Mashup deployment and configuration.

### NEW QUESTION # 16

You perform a major skim on the ruleset ABC:02-02 to ABC:03-01.

In the Answer area, select the ruleset versions that the skim operation uses.

**Answer:**

Explanation:

### NEW QUESTION # 17

How do you enable field-level auditing for properties?

- A. Add a field validation to the case workflow.
- B. Add an auditing optional action to the case workflow.
- C. Enable field-level auditing for the case type.

- D. Enable the auditing feature on the property rule forms.

**Answer: D**

Explanation:

Field-level auditing is enabled directly on the property rule form, where you can specify that changes to the property should be audited. This ensures that any changes to the field are tracked and recorded. References:

Pega Platform Help - Auditing.

### NEW QUESTION # 18

A global application with infrastructure nodes located throughout the world requires certain operations to start executing at midnight GMT.

Select two possible designs for this use case. (Choose Two)

- A. Use the Run in background step in the case life cycle and design a dedicated queue processor.
- B. Use the Queue-For-Processing method in an activity and design a dedicated queue processor.
- C. Use the Run in background step in the case life cycle and design a standard queue processor.
- D. Use the Queue-For-Processing method in an activity and design a standard queue processor.

**Answer: B,D**

Explanation:

To start operations at a specific GMT time regardless of where the server is located, you would use the Queue-For-Processing method in an activity. This method adds a task to a queue to be processed either by a standard or a dedicated queue processor. A dedicated queue processor can be configured to operate on a schedule, so it can start processing at midnight GMT. References: Pega SSA course materials on queue processors and timed events.

### NEW QUESTION # 19

An application includes the following set of circumspected instances of a decision table.

□ You update the application and increment the AccountManage ruleset version to 01-02-01. As part of this update, the circumstance .Status="Silver" is no longer needed by the application.

How do you implement this change?

- A. Create a new version of the circumspected decision table in AccountManage:01-02-01 and set the availability of the rule to Withdrawn.
- B. Create a new version of the circumspected decision table in AccountManage:01-02-01 and set the availability of the rule to Blocked.
- C. Do nothing. Rule resolution does not consider rules in a lower minor version of a ruleset.
- D. Create a new version of the circumspected decision table in AccountManage:01-02-01 and select the Base rule option.

**Answer: A**

### NEW QUESTION # 20

.....
